

The sTeX3 Package *

Michael Kohlhase, Dennis Müller
FAU Erlangen-Nürnberg
<http://kwarc.info/>

2022-02-03

Abstract

sTeX is a collection of L^AT_EX package that allow to markup documents semantically without leaving the document format, essentially turning L^AT_EX into a document format for mathematical knowledge management (MKM).

sTeX augments L^AT_EX with

- *Semantic macros* that denote and distinguish between mathematical concepts, operators, etc. independent of their notational presentation,
- A powerful *module system* that allows for authoring and importing individual fragments containing document text and/or semantic macros, independent of – and without hard coding – directory paths relative to the current document,
- A mechanism for exporting sTeX documents to (modular) XHTML, preserving all the semantic information for semantically informed knowledge management services.

This is the full documentation of sTeX. It consists of four parts:

- **Part I** is a general manual for the sTeX package and associated software. It is primarily directed at end-users who want to use sTeX to author semantically enriched documents.
- **Part II** documents the macros provided by the sTeX package. It is primarily directed at package authors who want to build on sTeX, but can also serve as a reference manual for end-users.
- **Part III** documents additional packages that build on sTeX, primarily its module system. These are not part of the sTeX package itself, but useful additions enabled by sTeX package functionality.
- **Part IV** is the detailed documentation of the sTeX package implementation.

*Version 3.0 (last revised 2022-02-03)

Part I
Manual

Chapter 1

What is sTeX?

Formal systems for mathematics (such as interactive theorem provers) have the potential to significantly increase both the accessibility of published knowledge, as well as the confidence in its veracity, by rendering the precise semantics of statements machine actionable. This allows for a plurality of added-value services, from semantic search up to verification and automated theorem proving. Unfortunately, their usefulness is hidden behind severe barriers to accessibility; primarily related to their surface languages reminiscent of programming languages and very unlike informal standards of presentation.

sTeX minimizes this gap between informal and formal mathematics by integrating formal methods into established and widespread authoring workflows, primarily L^AT_EX, via non-intrusive semantic annotations of arbitrary informal document fragments. That way formal knowledge management services become available for informal documents, accessible via an IDE for authors and via generated *active* documents for readers, while remaining fully compatible with existing authoring workflows and publishing systems.

Additionally, an extensible library of reusable document fragments is being developed, that serve as reference targets for global disambiguation, intermediaries for content exchange between systems and other services.

Every component of the system is designed modularly and extensibly, and thus lay the groundwork for a potential full integration of interactive theorem proving systems into established informal document authoring workflows.

The general sTeX workflow combines functionalities provided by several pieces of software:

- The sTeX package to use semantic annotations in L^AT_EX documents,
- RuSTeX to convert `tex` sources to (semantically enriched) `xhtml`,
- The MMT software, that extracts semantic information from the thus generated `xhtml` and provides semantically informed added value services.

Chapter 2

Quickstart

2.1 Setup

2.1.1 The sTeX IDE

TODO: VSCode Plugin

2.1.2 Manual Setup

Foregoing on the sTeX IDE, we will need several pieces of software; namely:

- **The sTeX-Package** available [here](#)¹. Note, that the CTAN repository for L^AT_EX packages may contain outdated versions of the sTeX package, so make sure, that your TEXMF system variable is configured such that the packages available in the linked repository are prioritized over potential default packages that come with your T_EX distribution.

- **The Mmt System** available [here](#)². We recommend following the setup routine documented [here](#).

Following the setup routine (Step 3) will entail designating a **MathHub**-directory on your local file system, where the MMT system will look for sTeX/MMT content archives.

- To make sure that sTeX too knows where to find its archives, we need to set a global system variable **MATHHUB**, that points to your local **MathHub**-directory (see [chapter 4](#)).

- **sTeX Archives** If we only care about L^AT_EX and generating pdfs, we do not technically need MMT at all; however, we still need the MATHHUB system variable to be set. Furthermore, MMT can make downloading content archives we might want to use significantly easier, since it makes sure that all dependencies of (often highly interrelated) sTeX archives are cloned as well.

Once set up, we can run **mmt** in a shell and download an archive along with all of its dependencies like this: `lmh install <name-of-repository>`, or a whole *group* of archives; for example, `lmh install smglom` will download all smglom archives.

¹EdNOTE: For now, we require the latex3-branch

²EdNOTE: For now, we require the sTeX-branch, requiring manually compiling the MMT sources

- **R_US_TE_X** The MMT system will also set up R_US_TE_X for you, which is used to generate (semantically annotated) `xhtml` from `tex` sources. In lieu of using MMT, you can also download and use R_US_TE_X directly [here](#).

2.2 A First s_TE_X Document

Having set everything up, we can write a first s_TE_X document. As an example, we will use the `smglom/calculus` and `smglom/arithmetics` archives, which should be present in the designated MathHub-folder.

The document we will consider is the following:

```
\documentclass{article}
\usepackage{stex}
\usepackage{xcolor}
\def\compemph#1{\textcolor{blue}{#1}}

\begin{document}
\usemodule[smglom/calculus]{series}
\usemodule[smglom/arithmetics]{realarith}

The \symref{series}{series}  $\sum_{n=1}^{\infty} \frac{1}{2^n}$ 
\realdivide[\frac]{1}{2}
\realpower{2}{n}
\symref{converges}{converges} towards 1$.
\end{document}
```

Compiling this document with `pdflatex` should yield the output

The **series** $\sum_{n=1}^{\infty} \frac{1}{2^n}$ **converges** towards 1.

Note that the \sum and ∞ -symbols are highlighted in blue, and the words “series” and “converges” in bold. This signifies that these words and symbols reference s_TE_X *symbols* formally declared somewhere; associating their *presentation* in the document with their (formal) definition - i.e. their semantics. The precise way in which they are highlighted (if at all) can of course be customized (see ³).

\usemodule

The command `\usemodule[some/archive]{modulename}` finds some module in the appropriate archive – in the first case (`\usemodule[smglom/calculus]{series}`), s_TE_X looks for the archive `smglom/calculus` in our local MathHub-directory (see [chapter 4](#)), and in its source-folder for a file `series.tex`. Since no such file exists, and by default the document is assumed to be in *english*, it picks the file `series.en.tex`, and indeed, in here we find a statement `\begin{module}{series}`.

s_TE_X now reads this file and makes all semantic macros therein available to use, along with all its dependencies. This enables the usage of `\infinitiesum` later on.

Analogously, `\usemodule[smglom/arithmetics]{realarith}` opens the file `realarith.en.tex` in the `.../smglom/arithmetics/source-folder` and makes its contents available, e.g. `\realdivide` and `\realpower`.

³EdNOTE: somewhere later

`\symref`
`\symname`

The command `\symref{symbolname}{text}` marks the `text` in the second argument as representing the `symbolname` in the first argument – which is why the word “series” is set in boldface. In the pdf, this is all that happens. In the `xhtml` (which we will investigate shortly) however, we will note that the word “series” is now annotated with the full URI of the symbol denoting the *mathematical concept of a series*. In other words, the word is associated with an unambiguous semantics.

Notably, in both cases above (*series* and *converges*) the text that *references* the symbol and the name of the symbol are identical. Since this occurs quite often, the shorthand `\symname{converges}` would have worked as well, where `\symname{foo-bar}` behaves exactly like `\symref{foo-bar}{foo bar}` - i.e. the text is simply the name of the symbol with `-` replaced by a space.

TODO explain `xhtml` conversion, MMT compilation (requires an archive...?).

Chapter 3

Using Semantic Macros

TODO

Chapter 4

TeX Archives

4.1 The Local MathHub-Directory

`\usemodule`, `\importmodule`, `\inputref` etc. allow for including content modularly without having to specify absolute paths, which would differ between users and machines. Instead, TeX uses *archives* that determine the global namespaces for symbols and statements and make it possible for TeX to find content referenced via such URIs.

All TeX archives need to exist in the local MathHub-directory. TeX knows where this folder is via one of three means:

1. If the TeX package is loaded with the option `mathhub=/path/to/mathhub`, then TeX will consider `/path/to/mathhub` as the local MathHub-directory.
2. If the `mathhub` package option is *not* set, but the macro `\mathhub` exists when the TeX-package is loaded, then this macro is assumed to point to the local MathHub-directory; i.e. `\def\mathhub{/path/to/mathhub}\usepackage{stex}` will set the MathHub-directory as `path/to/mathhub`.
3. Otherwise, TeX will attempt to retrieve the system variable `MATHHUB`, assuming it will point to the local MathHub-directory. Since this variant needs setting up only *once* and is machine-specific (rather than defined in tex code), it is compatible with collaborating and sharing tex content, and hence recommended.

4.2 The Structure of TeX Archives

An TeX archive `group/name` needs to be stored in the directory `/path/to/mathhub/group/name`; e.g. assuming your local MathHub-directory is set as `/user/foo/MathHub`, then in order for the `smglom/calculus`-archive to be found by the TeX system, it needs to be in `/user/foo/MathHub/smglom/calculus`.

Each such archive needs two subdirectories:

- `/source` – this is where all your tex files go.
- `/META-INF` – a directory containing a single file `MANIFEST.MF`, the content of which we will consider shortly

An additional `lib`-directory is optional, and is where \TeX will look for files included via `\libinput`.

Additionally a *group* of archives `group/name` may have an additional archive `group/meta-inf`. If this `meta-inf`-archive has a `/lib`-subdirectory, it too will be searched by `\libinput` from all tex files in any archive in the `group/*-group`.

4.3 MANIFEST.MF-Files

The `MANIFEST.MF` in the `META-INF`-directory consists of key-value-pairs, instructing \TeX (and associated software) of various properties of an archive. For example, the `MANIFEST.MF` of the `smglom/calculus`-archive looks like this:

```
id: smglom/calculus
source-base: http://mathhub.info/smglob/calculus
narration-base: http://mathhub.info/smglob/calculus
dependencies: smglom/arithmetic,smglom/sets,smglom/topology,
              smglom/mv,smglom/linear-algebra,smglom/algebra
responsible: Michael.Kohlhase@FAU.de
title: Elementary Calculus
teaser: Terminology for the mathematical study of change.
description: desc.html
```

Many of these are in fact ignored by \TeX , but some are important:

`id`: The name of the archive, including its group (e.g. `smglom/calculus`),

`source-base` or

`ns`: The namespace from which all symbol and module URIs in this repository are formed, see (TODO),

`narration-base`: The namespace from which all document URIs in this repository are formed, see (TODO),

`url`: The URL that is formed as a basis for *external references*, see (TODO),

`dependencies`: All archives that this archive depends on. \TeX ignores this field, but MMT can pick up on them to resolve dependencies, e.g. for `lmh install`.

8.1.1 Semantic Macros and Notations

Semantic macros invoke a formally declared symbol.

To declare a symbol (in a module), we use `\symdecl`, which takes as argument the name of the corresponding semantic macro, e.g. `\symdecl{foo}` introduces the macro `\foo`. Additionally, `\symdecl` takes several options, the most important one being its arity. `foo` as declared above yields a *constant* symbol. To introduce an *operator* which takes arguments, we have to specify which arguments it takes.

For example, to introduce binary multiplication, we can do `\symdecl[args=2]{mult}`. We can then supply the semantic macro with arbitrarily many notations, such as `\notation{mult}{#1 #2}`.

Example 1

```
\symdecl[args=2]{mult}
\notation{mult}{#1 #2}
 $\mult{a}{b}$ 
```

ab

Since usually, a freshly introduced symbol also comes with a notation from the start, the `\symdef` command combines `\symdecl` and `\notation`. So instead of the above, we could have also written

```
\symdef[args=2]{mult}{#1 #2}
```

Adding more notations like `\notation[cdot]{mult}{#1 \comp{\cdot} #2}` or `\notation[times]{mult}{#1 \comp{\times} #2}` allows us to write $\mult[cdot]{a}{b}$ and $\mult[times]{a}{b}$:

Example 2

```
\notation[cdot]{mult}{#1 \comp{\cdot} #2}
\notation[times]{mult}{#1 \comp{\times} #2}
 $\mult[cdot]{a}{b}$  and  $\mult[times]{a}{b}$ 
```

$a \cdot b$ and $a \times b$

.

Not using an explicit option with a semantic macro yields the first declared notation, unless changed⁴.

Outside of math mode, or by using the starred variant `\foo*`, allows to provide a custom notation, where notational (or textual) components can be given explicitly in square brackets.

Example 3

```
 $\mult*{a}[\comp{\ast}]{b}$  is the
\mult[\comp{product of}][ $a$ ][ $b$ ]
```

$a * b$ is the product of a and b

.

In custom mode, prefixing an argument with a star will not print that argument, but still export it to OMDoc:

Example 4

```
\mult[\comp{Multiplying}]* $\mult{a}{b}$ [ again by  $b$  yields ...]
```

Multiplying again by b yields...

The syntax `*[int]` allows switching the order of arguments. For example, given a 2-ary semantic macro `\forevery` with exemplary notation `\forall #1. #2`, we can write

Example 5

```
\symdecl[ args=2]{forevery}
\forevery* [2]{The proposition  $P$ }[ $\comp{holds for every}$ ][1]{ $x \in A$ }
```

The proposition P holds for every $x \in A$

⁴EdNOTE: TODO

When using `*[n]`, after reading the provided (n th) argument, the “argument counter” automatically continues where we left off, so the `*[1]` in the above example can be omitted.

For a macro with `arity > 0`, we can refer to the operator *itself* semantically by suffixing the semantic macro with an exclamation point `!` in either text or math mode. For that reason `\notation` (and thus `\symdef`) take an additional optional argument `op=`, which allows to assign a notation for the operator itself. e.g.

Example 6

```
\symdef[ args=2,op={+}]{add}{#1 \comp+ #2}
The operator  $\mathbin{\textcolor{teal}{+}}$  adds two elements, as in  $\mathbin{\textcolor{teal}{+}} ab$ .
```

The operator $+$ adds two elements, as in $a + b$.

`*` is composable with `!` for custom notations, as in:

Example 7

```
\mult![\comp{Multiplication}] (denoted by  $\mathbin{\textcolor{teal}{*}}!$   $\mathbin{\textcolor{teal}{*}} \mathbin{\textcolor{teal}{\cdot}}$ ) is defined by...
```

Multiplication (denoted by \cdot) is defined by...

The macro `\comp` as used everywhere above is responsible for highlighting, linking, and tooltips, and should be wrapped around the notation (or text) components that should be treated accordingly. While it is attractive to just wrap a whole notation, this would also wrap around e.g. the arguments themselves, so instead, the user is tasked with marking the notation components themselves.

The precise behaviour of `\comp` is governed by the macro `\@comp`, which takes two arguments: The tex code of the text (unexpanded) to highlight, and the URI of the current symbol. `\@comp` can be safely redefined to customize the behaviour.

The starred variant `\symdecl*{foo}` does not introduce a semantic macro, but still declares a corresponding symbol. `foo` (like any other symbol, for that matter) can then be accessed via `\STEXsymbol{foo}` or (if `foo` was declared in a module `Foo`) via `\STEXModule{Foo}?{foo}`.

both `\STEXsymbol` and `\STEXModule` take any arbitrary ending segment of a full URI to determine which symbol or module is meant. e.g. `\STEXsymbol{Foo?foo}` is also valid, as are e.g. `\STEXModule{path?Foo}?{foo}` or `\STEXsymbol{path?Foo?foo}`

There’s also a convient shortcut `\symref{?foo}{some text}` for `\STEXsymbol{?foo}!` `[some text]`

Other Argument Types

So far, we have stated the arity of a semantic macro directly. This works if we only have “normal” (or more precisely: *i*-type) arguments. To make use of other argument types, instead of providing the arity numerically, we can provide it as a sequence of characters

representing the argument types – e.g. instead of writing `args=2`, we can equivalently write `args=ii`, indicating that the macro takes two i-type arguments.

Besides i-type arguments, \TeX has two other types, which we will discuss now.

The first are *binding* (b-type) arguments, representing variables that are *bound* by the operator. This is the case for example in the above `\forevery`-macro: The first argument is not actually an argument that the `forevery` “function” is “applied” to; rather, the first argument is a new variable (e.g. x) that is *bound* in the subsequent argument. More accurately, the macro should therefore have been implemented thusly:

```
\symdef[args=bi]{forevery}{\forall #1.\; #2}
```

b-type arguments are indistinguishable from i-type arguments within \TeX , but are treated very differently in OMDOC and by MMT. More interesting *within* \TeX are a-type arguments, which represent (associative) arguments of flexible arity, which are provided as comma-separated lists. This allows e.g. better representing the `\mult`-macro above:

Example 8

```
\symdef[ args=a]{mult}{#1}{#1 \comp\cdot #2}
$\mult{a,b,c,{d^e},f}$
```

$$a \cdot b \cdot c \cdot d^e \cdot f$$

As the example above shows, notations get a little more complicated for associative arguments. For every a-type argument, the `\notation`-macro takes an additional argument that declares how individual entries in an a-type argument list are aggregated. The first notation argument then describes how the aggregated expression is combined into the full representation.

For a more interesting example, consider a flexary operator for ordered sequences in ordered set, that taking arguments $\{a, b, c\}$ and `\mathbb{R}` prints $a \leq b \leq c \in \mathbb{R}$. This operator takes two arguments (an a-type argument and an i-type argument), aggregates the individuals of the associative argument using `\leq`, and combines the result with `\in` and the second argument thusly:

Example 9

```
\symdef[ args=ai]{numseq}{#1 \comp\in #2}{#1 \comp\leq #2}
$\numseq{a,b,c}{\mathbb{R}}$
```

$$a \leq b \leq c \in \mathbb{R}$$

Finally, B-type arguments combine the functionalities of a and b, i.e. they represent flexary binding operator arguments.

5 6

⁵EDNOTE: what about e.g. $\int \int \int f \, dx \, dy \, dz$?

⁶EDNOTE: “decompose” a-type arguments into fixed-arity operators?

Precedences

Every notation has an (upwards) *operator precedence* and for each argument a (downwards) *argument precedence* used for automated bracketing. For example, a notation for a binary operator `\foo` could be declared like this:

```
\notation[prec=200;500x600]{foo}{#1 \comp{+} #2}
```

assigning an operator precedence of 200, an argument precedence of 500 for the first argument, and an argument precedence of 600 for the second argument.

\TeX insert brackets thusly: Upon encountering a semantic macro (such as `\foo`), its operator precedence (e.g. 200) is compared to the current downwards precedence (initially `\neginfprec`). If the operator precedence is *larger* than the current downwards precedence, parentheses are inserted around the semantic macro.

Notations for symbols of arity 0 have a default precedence of `\infprec`, i.e. by default, parentheses are never inserted around constants. Notations for symbols with arity > 0 have a default operator precedence of 0. If no argument precedences are explicitly provided, then by default they are equal to the operator precedence.

Consequently, if some operator A should bind stronger than some operator B , then A as operator precedence should be smaller than B 's argument precedences.

For example:

Example 10

```
\notation[prec=100]{plus}{#1 \comp{+} #2}
\notation[prec=50]{times}{#1 \comp{\cdot} #2}
 $\plus{a}{\times{b}{c}}$  and  $\times{a}{\plus{b}{c}}$ 
```

$a + b \cdot c$ and $a \cdot (b + c)$

8.1.2 Archives and Imports

Namespaces

Ideally, \TeX would use arbitrary URIs for modules, with no forced relationships between the *logical* namespace of a module and the *physical* location of the file declaring the module – like MMT does things.

Unfortunately, \TeX only provides very restricted access to the file system, so we are forced to generate namespaces systematically in such a way that they reflect the physical location of the associated files, so that \TeX can resolve them accordingly. Largely, users need not concern themselves with namespaces at all, but for completeness sake, we describe how they are constructed:

- If `\begin{module}{Foo}` occurs in a file `/path/to/file/Foo[.<lang>].tex` which does not belong to an archive, the namespace is `file://path/to/file`.
- If the same statement occurs in a file `/path/to/file/bar[.<lang>].tex`, the namespace is `file://path/to/file/bar`.

In other words: outside of archives, the namespace corresponds to the file URI with the filename dropped iff it is equal to the module name, and ignoring the (optional) language suffix¹.

If the current file is in an archive, the procedure is the same except that the initial segment of the file path up to the archive's `source`-folder is replaced by the archive's namespace URI.

Paths in Import-Statements

Conversely, here is how namespaces/URIs and file paths are computed in import statements, exemplary `\importmodule`:

- `\importmodule{Foo}` outside of an archive refers to module `Foo` in the current namespace. Consequently, `Foo` must have been declared earlier in the same document or, if not, in a file `Foo[.<lang>].tex` in the same directory.
- The same statement *within* an archive refers to either the module `Foo` declared earlier in the same document, or otherwise to the module `Foo` in the archive's top-level namespace. In the latter case, it has to be declared in a file `Foo[.<lang>].tex` directly in the archive's `source`-folder.
- Similarly, in `\importmodule{some/path?Foo}` the path `some/path` refers to either the sub-directory and relative namespace path of the current directory and namespace outside of an archive, or relative to the current archive's top-level namespace and `source`-folder, respectively.

The module `Foo` must either be declared in the file `<top-directory>/some/path/Foo[.<lang>].tex`, or in `<top-directory>/some/path[.<lang>].tex` (which are checked in that order).

- Similarly, `\importmodule[Some/Archive]{some/path?Foo}` is resolved like the previous cases, but relative to the archive `Some/Archive` in the mathhub-directory.
- Finally, `\importmodule{full://uri?Foo}` naturally refers to the module `Foo` in the namespace `full://uri`. Since the file this module is declared in can not be determined directly from the URI, the module must be in memory already, e.g. by being referenced earlier in the same document.

Since this is less compatible with a modular development, using full URIs directly is discouraged.

¹which is internally attached to the module name instead, but a user need not worry about that.

Part II

Documentation

Chapter 9

sTeX-Basics

Both the sTeX package and class offer the following package options:

debug ($\langle\log\text{-}prefix\rangle*$) Logs debugging information with the given prefixes to the terminal, or all if **all** is given.

showmods ($\langle\text{boolean}\rangle$) Shows explicit module information at the document margins.

lang ($\langle\text{language}\rangle*$) Languages to load with the **babel** package.

mathhub ($\langle\text{directory}\rangle$) MathHub folder to search for repositories.

sms ($\langle\text{boolean}\rangle$) use *persisted* mode (see ???).

image ($\langle\text{boolean}\rangle$) passed on to tikzinput.

9.1 Macros and Environments

<code>\sTeX</code>	Both print this sTeX logo.
<code>\stex</code>	

<code>\stex_debug:nn</code>	<code>\stex_debug:nn {$\langle\log\text{-}prefix\rangle$} {$\langle\text{message}\rangle$}</code>
-----------------------------	---

Logs $\langle\text{message}\rangle$, if the package option **debug** contains $\langle\log\text{-}prefix\rangle$.

<code>\stex_add_to_sms:n</code>	Adds the provided code to the <code>.sms</code> -file of the document.
---------------------------------	--

<code>\if@latexml</code>	L ^A T _E X2e and L ^A T _E X3 conditionals for L ^A T _E XML.
<code>\latexml_if_p:</code>	
<code>\latexml_if:T</code>	
<code>\latexml_if:F</code>	
<code>\latexml_if:TF</code>	

We have four macros for annotating generated HTML (via L^AT_EXML or R_US_TE_X) with attributes:

<code>\stex_annotate:nnn</code>	<code>\stex_annotate:nnn {⟨property⟩} {⟨resource⟩} {⟨content⟩}</code>
<code>\stex_annotate_invisible:nnn</code>	
<code>\stex_annotate_invisible:n</code>	

Annotates the HTML generated by $\langle content \rangle$ with

`property="stex:⟨property⟩", resource="⟨resource⟩".`

`\stex_annotate_invisible:n` adds the attributes

`stex:visible="false", style="display:none".`

`\stex_annotate_invisible:nnn` combines the functionality of both.

<code>stex_annotate_env</code>	<code>\begin{stex_annotate_env}{⟨property⟩}{⟨resource⟩}</code> $\langle content \rangle$ <code>\end{stex_annotate_env}</code> behaves like <code>\stex_annotate:nnn {⟨property⟩} {⟨resource⟩} {⟨content⟩}</code> .
--------------------------------	---

<code>\c_stex_languages_prop</code>
<code>\c_stex_language_abbrevs_prop</code>

Map language abbreviations to their full babel names and vice versa. e.g. `\c_stex_languages_prop{en}` yields `english`, and `\c_stex_language_abbrevs_prop{english}` yields `en`.

<code>\stex_deactivate_macro:Nn</code>	<code>\stex_deactivate_macro:Nn⟨cs⟩{⟨environments⟩}</code>
<code>\stex_reactivate_macro:N</code>	

Makes the macro $\langle cs \rangle$ throw an error, indicating that it is only allowed in the context of $\langle environments \rangle$.

`\stex_reactivate_macro:N⟨cs⟩` reactivates it again, i.e. this happens ideally in the $\langle begin \rangle$ -code of the associated environments.

<code>\MSC</code>	<code>\MSC{⟨msc⟩}</code>
-------------------	--------------------------

Designates the *math subject classifier* of the current module / file.

Chapter 10

sTEX-MathHub

Code related to managing and using MathHub repositories, files, paths and related hooks and methods.

10.1 Macros and Environments

<code>\stex_kpsewhich:n</code>	<code>\stex_kpsewhich:n</code> executes <code>kpsewhich</code> and stores the return in <code>\l_stex_kpsewhich_return_str</code> . This does not require shell escaping.
--------------------------------	---

10.1.1 Files, Paths, URIs

<code>\stex_path_from_string:Nn</code>	<code>\stex_path_from_string:Nn</code> $\langle path-variable \rangle$ $\{ \langle string \rangle \}$
<code>\stex_path_from_string:(NV cn cV)</code>	

turns the $\langle string \rangle$ into a path by splitting it at `/`-characters and stores the result in $\langle path-variable \rangle$. Also applies `\stex_path_canonicalize:N`.

<code>\stex_path_to_string:NN</code>	The inverse; turns a path into a string and stores it in the second argument variable, or
<code>\stex_path_to_string:N</code>	leaves it in the input stream.

<code>\stex_path_canonicalize:N</code>	Canonicalizes the path provided; in particular, resolves <code>.</code> and <code>..</code> path segments.
--	--

<code>\stex_path_if_absolute_p:N</code>	\star
<code>\stex_path_if_absolute:NTF</code>	\star

Checks whether the path provided is *absolute*, i.e. starts with an empty segment

<code>\c_stex_pwd_seq</code>	Store the current working directory as path-sequence and string, respectively, and the (heuristically guessed) full path to the main file, based on the PWD and <code>\jobname</code> .
<code>\c_stex_pwd_str</code>	
<code>\c_stex_mainfile_seq</code>	
<code>\c_stex_mainfile_str</code>	

`\g_stex_currentfile_seq`

The file being currently processed (respecting `\input` etc.)

Test 1

```
\ExplSyntaxOn
\def\cpath@print#1{

aaa/bbb/./ddd	aaa/ddd	aaa/ddd
aaa/bbb/./ddd	aaa/bbb/ddd	aaa/bbb/ddd
./		
aaa/bbb/./..		

10.1.2 MathHub Archives

`\mathhub`

`\c_stex_mathhub_seq`

`\c_stex_mathhub_str`

We determine the path to the local MathHub folder via one of three means, in order of precedence:

1. The `mathhub` package option, or
2. the `\mathhub`-macro, if it has been defined before the `\usepackage{stex}`-statement, or
3. the `MATHHUB` system variable.

In all three cases, `\c_stex_mathhub_seq` and `\c_stex_mathhub_str` are set accordingly.

`\l_stex_current_repository_prop`

Always points to the *current* MathHub repository (if we currently are in one). Has the fields `id`, `ns` (namespace), `narr` (narrative namespace; currently not in use) and `deps` (dependencies; currently not in use).

<hr/> <hr/> <code>\stex_set_current_repository:n</code>	Sets the current repository to the one with the provided ID. calls <code>__stex_mathhub_do_manifest:n</code> , so works whether this repository's MANIFEST.MF-file has already been read or not.
<hr/> <hr/> <code>\stex_require_repository:n</code>	Calls <code>__stex_mathhub_do_manifest:n</code> iff the corresponding archive property list does not already exist, and adds a corresponding definition to the <code>.sms</code> -file.
<hr/> <hr/> <code>\stex_in_repository:nn</code>	<code>\stex_in_repository:nn{<repository-name>}{<code>}</code> Change the current repository to <code>{<repository-name>}</code> (or not, if <code>{<repository-name>}</code> is empty), and passes its ID on to <code>{<code>}</code> as #1. Switches back to the previous repository after executing <code>{<code>}</code> .
<hr/> <hr/> <code>\mhpath *</code>	<code>\mhpath{<archive-ID>}{<filename>}</code> Expands to the full path of file <code><filename></code> in repository <code><archive-ID></code> . Does not check whether the file or the repository exist.
<hr/> <hr/> <code>\inputref</code> <hr/> <code>\inputref:nn</code>	<code>\inputref[<archive-ID>]{<filename>}</code> <code>\inputs</code> the file <code><filename></code> in repository <code><archive-ID></code> .
<hr/> <hr/> <code>\libinput</code>	<code>\libinput{<filename>}</code> Inputs <code><filename>.tex</code> from the <code>lib</code> folders in the current archive and the <code>meta-inf</code> -archive of the current archive group (if existent). Throws an error if no file by that name exists in either folder, includes both if both exist.

Test 2

```

\ExplSyntaxOn
\stex_require_repository:n { Foo/Bar }
id:-\prop_item:cn {c_stex_mathhub_Foo/Bar_manifest_prop} {id}\ \
narr:-\prop_item:cn {c_stex_mathhub_Foo/Bar_manifest_prop} {narr}\ \

Chapter 11

sTeX-References

Code related to links and cross-references

11.1 Macros and Environments

Chapter 12

sTeX-Modules

Code related to Modules

12.1 Macros and Environments

`\l_stex_current_module_str`

All information of a module is stored as a property list. `\l_stex_current_module_str` always points to the current module (if existent).

Most importantly, the `content`-field stores all the code to execute on activation; i.e. when this module is being included.

Additionally, it stores:

- The *name* in field `name`,
- the *namespace* in field `ns`,
- this module's *language* in field `lang`,
- if a language module that translates some other modules, the *original* module in field `sig` (for signature),
- the *metatheory* in field `meta`,
- the URIs of all *imported modules* in field `imports`,
- the names of all *declarations* in field `constants`,
- the *file* this module was declared in in field `file`,

`\l_stex_all_modules_seq`

Stores full URIs for all modules currently in scope.

```
\g_stex_module_files_prop
\g_stex_modules_in_file_seq
```

A property list mapping file paths to the lists of all modules declared therein. `\g_stex_modules_in_file_seq` always points to the current file(-stream - `\inputs` are considered the same file).

```
\stex_if_in_module_p: * Conditional for whether we are currently in a module
\stex_if_in_module:TF *
```

```
\stex_if_module_exists_p:n *
\stex_if_module_exists:nTF *
```

Conditional for whether a module with the provided URI is already known.

```
\stex_add_to_current_module:n
\STEXexport
```

Adds the provided tokens to the `content` field of the current module.

```
\stex_add_constant_to_current_module:n
```

Adds the declaration with the provided name to the `constants` field of the current module.

```
\stex_add_import_to_current_module:n
```

Adds the module with the provided full URI to the `imports` field of the current module.

```
\stex_modules_compute_namespace:nN \stex_modules_compute_namespace:nN
{\<namespace>} {\<path>}
```

Computes the namespace for file `<path>` in repository with namespace `<namespace>` as follows:

If the file is `.../source/sub/file.tex` and the namespace `http://some.namespace/foo`, then the namespace of is `http://some.namespace/foo/sub/file`.

```
\stex_modules_current_namespace:
```

Computes the current namespace

Test 3

```
\ExplSyntaxOn
\stex_modules_current_namespace:
Namespace~1:\\ \l_stex_modules_ns_str \\
Faking~a~repository:\\
\stex_set_current_repository:n{Foo/Bar}
\seq_pop_right:NN \g_stex_currentfile_seq \testtemp
\edef\testtempb{\detokenize{source}}
\exp_args:NNo \seq_put_right:Nn \g_stex_currentfile_seq { \testtempb }
\edef\testtempb{\detokenize{test}}
\exp_args:NNo \seq_put_right:Nn \g_stex_currentfile_seq { \testtempb }
\exp_args:NNo \seq_put_right:Nn \g_stex_currentfile_seq { \testtemp }
\stex_modules_current_namespace:
Namespace~2:\\ \l_stex_modules_ns_str
\ExplSyntaxOff
```

```

Namespace 1:
file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest
Faking a repository:
Namespace 2:
http://mathhub.info/tests/Foo/Bar/test/stextest

```

12.1.1 The module-environment

module `\begin{module}[\langle options \rangle]{\langle name \rangle}`
 Opens a new module with name $\langle name \rangle$.
 TODO document options.

`\stex_module_setup:nn` `\stex_module_setup:nn{\langle params \rangle}{\langle name \rangle}`
 Sets up a new module with name $\langle name \rangle$ and optional parameters $\langle params \rangle$. In particular, sets `\l_stex_current_module_str` appropriately.

`\stex_modules_heading:` Takes care of the module header, if the `showmods` package option is true. This macro can be overridden for customization.

@module `\begin{@module}[\langle options \rangle]{\langle name \rangle}`
 Core functionality of the `module-environment` without a header.

Test 4

```

\ExplSyntaxOn

\stex_debug:nn{modules}{Test:-\stex_path_to_string:N \g_stex_currentfile_seq }
\begin{module}[title=Foo Bar]{Bar}
Module-path:-
\prop_item:cn {c_stex_module_\l_stex_current_module_str _prop} { ns }?
\prop_item:cn {c_stex_module_\l_stex_current_module_str _prop} { name }\\
Language:-\prop_item:cn {c_stex_module_\l_stex_current_module_str _prop} { lang }\\
Signature:-\prop_item:cn {c_stex_module_\l_stex_current_module_str _prop} { sig }\\
Metatheory:-\prop_item:cn {c_stex_module_\l_stex_current_module_str _prop} { meta }\\
\end{module}
\ExplSyntaxOff
```

```
Module 12.1.1[Bar] (FooBar)
Module path: http://mathhub.info/tests/Foo/Bar/Foo?Bar
Language:
Signature:
Metatheory:
```

`\STEXModule` `\STEXModule {⟨fragment⟩}`

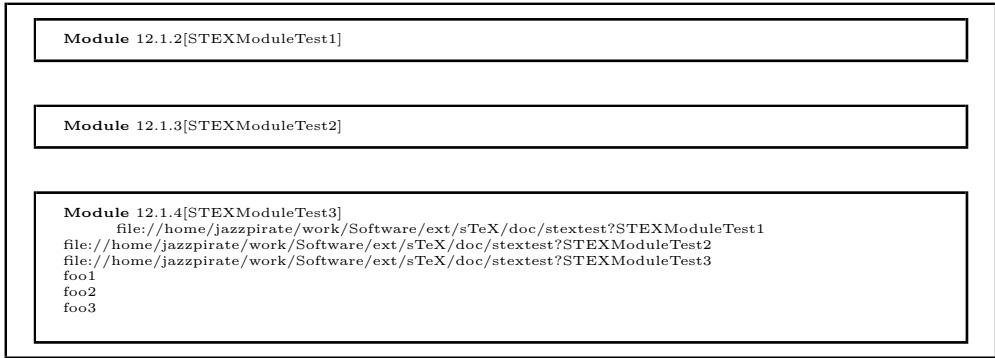

Attempts to find a module whose URI ends with `⟨fragment⟩` in the current scope and passes the full URI on to `\stex_invoke_module:n`.

`\stex_invoke_module:n`

Invoked by `\STEXModule`. Needs to be followed either by `!⟨macro⟩` or `?{⟨symbolname⟩}`. In the first case, it stores the full URI in `⟨macro⟩`; in the second case, it invokes the symbol `⟨symbolname⟩` in the selected module.

Test 6

```
\begin{module}{STEXModuleTest1}
\symdecl{foo}
\end{module}
\begin{module}{STEXModuleTest2}
\importmodule{STEXModuleTest1}
\symdecl{foo}
\end{module}
\begin{module}{STEXModuleTest3}
\importmodule{STEXModuleTest2}
\symdecl{foo}
\STEXModule{STEXModuleTest1}!\teststring
\teststring\
\STEXModule{STEXModuleTest2}!\teststring
\teststring\
\STEXModule{STEXModuleTest3}!\teststring
\teststring\
\STEXModule{STEXModuleTest1}?{foo}[\comp{foo1}]\
\STEXModule{STEXModuleTest2}?{foo}[\comp{foo2}]\
\STEXModule{STEXModuleTest3}?{foo}[\comp{foo3}]\
\end{module}
```

`\stex_activate_module:n` Activate the module with the provided URI; i.e. executes all macro code of the module's `content`-field (does nothing if the module is already activated in the current context) and adds the module to `\l_stex_all_modules_seq`.

Chapter 13

STEX-Module Inheritance

Code related to Module Inheritance, in particular *sms mode*.

13.1 Macros and Environments

13.1.1 SMS Mode

“SMS Mode” is used when loading modules from external tex files. It deactivates any output and ignores all T_EX commands not explicitly allowed via the following lists:

`\g_stex_smsmode_allowedmacros_tl`

Macros that are executed as is; i.e. with the category code scheme used in SMS mode.

`\g_stex_smsmode_allowedmacros_escape_tl`

Macros that are executed with the category codes restored.

Importantly, these macros need to call `\stex_smsmode_set_codes:` after reading all arguments. Note, that `\stex_smsmode_set_codes:` takes care of checking whether we are in SMS mode in the first place, so calling this function eagerly is unproblematic.

`\g_stex_smsmode_allowedenvs_seq`

The names of environments that should be allowed in SMS mode. The corresponding `\begin`-statements are treated like the macros in `\g_stex_smsmode_allowedmacros_escape_tl`, so `\stex_smsmode_set_codes:` should be called at the end of the `\begin`-code. Since `\end`-statements take no arguments anyway, those are called with the SMS mode category code scheme active.

`\stex_if_smsmode_p: *`
`\stex_if_smsmode:TF *`

Tests whether SMS mode is currently active.

`\stex_smsmode_set_codes:`

Sets the current category code scheme to that of the SMS mode, if SMS mode is currently active and if necessary.

This method should be called at the end of every macro or `\begin` environment code that are allowed in SMS mode.

`\stex_in_smsmode:nn`

`\stex_in_smsmode:nn {<name>} {<code>}`

Executes `<code>` in SMS mode. `<name>` can be arbitrary, but should be distinct, since it allows for nesting `\stex_in_smsmode:nn` without spuriously terminating SMS mode.

Test 7

```
\immediate\openout\testfile=./tests/sometest.tex
\immediate\write\testfile{\detokenize{\this is \a test}^J}
\immediate\write\testfile{\detokenize{this \is a \test}}
\immediate\closeout\testfile
\ExplSyntaxOn
\stex_in_smsmode:nn { foo } {
  \input{tests/sometest.tex}
}
\ExplSyntaxOff
```

13.1.2 Imports and Inheritance

`\importmodule`

`\importmodule[<archive-ID>]{<module-path>}`

Imports a module by reading it from a file and “activating” it. \TeX determines the module and its containing file by passing its arguments on to `\stex_import_module-path:nn`.

Test 8

```
\begin{module}{Foo}
\symdecl[name=foo, args=3]{bar}
\symdecl[ args=bai]{foobar}
Meaning:-\present\bar\
\end{module}
Meaning:-\present\bar\
\begin{module}{Importtest}
\importmodule{Foo}
Meaning:-\present\bar\
\end{module}
\begin{module}{Importtest2}
\importmodule{Importtest}
Meaning:-\present\bar\
\end{module}
```

Module 13.1.1[Foo]
Meaning: `\macro->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo?foo}<`

Meaning: `\macro->\protect \bar <`

Module 13.1.2[Importtest]
Meaning: `\macro->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo?foo}<`

Module 13.1.3[Importtest2]
Meaning: `\macro->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo?foo}<`

`\usemodule` `\importmodule[⟨archive-ID⟩]{⟨module-path⟩}`

Like `\importmodule`, but does not export its contents; i.e. including the current module will not activate the used module

Test 9

```

\begin{module}{UseTest1}
\symdecl{foo}
\end{module}
\begin{module}{UseTest2}
\usemodule{UseTest1}
\symdecl{bar}
Meaning:~\present\foo\\
\end{module}
\begin{module}{UseTest3}
\importmodule{UseTest2}
Meaning:~\present\foo\\
Meaning:~\present\bar\\

All modules: \ExplSyntaxOn
\seq_use:Nn \l_stex_all_modules_seq {,~} \\
All~symbols:~
\seq_use:Nn \l_stex_all_symbols_seq {,~}
\ExplSyntaxOff
\end{module}

```

Module 13.1.4[UseTest1]

Module 13.1.5[UseTest2]

Meaning: `>macro:->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest1?foo}<`

Module 13.1.6[UseTest3]

Meaning: `>undefined<`

Meaning: `>macro:->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest2?bar}<`

All modules: `http://mathhub.info/sTeX?Metatheory`, `file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest3`,
`file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest2`
All symbols: `http://mathhub.info/sTeX?Metatheory?isa`, `http://mathhub.info/sTeX?Metatheory?bind`, `http://mathhub.info/sTeX?Metatheory?fromto`, `http://mathhub.info/sTeX?Metatheory?apply`, `http://mathhub.info/sTeX?Metatheory?collec`,
`http://mathhub.info/sTeX?Metatheory?seqtype`, `http://mathhub.info/sTeX?Metatheory?sequence-index`, `http://mathhub.info/sTeX?Metatheory?aseqfromto`, `http://mathhub.info/sTeX?Metatheory?aseqfromtovia`, `http://mathhub.info/sTeX?Metatheory?mathematical-structure`,
`file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest2?bar`

Test 10

```

Circular dependencies:
\begin{module}{CircDep1}
\importmodule[Foo/Bar]{circular1?Circular1}
\importmodule[Bar/Foo]{circular2?Circular2}
\present\fooA\\
\present\fooB\\
\end{module}

```

Circular dependencies:

Module 13.1.7[CircDep1]

`>macro:->\stex_invoke_symbol:n {http://mathhub.info/tests/Foo/Bar/circular1?Circular1?fooA}<`

`>macro:->\stex_invoke_symbol:n {http://mathhub.info/tests/Bar/Foo/circular2?Circular2?fooB}<`

`\stex_import_module_uri:nn`

`\stex_import_module_uri:nn {<archive-ID>} {<module-path>}`

Determines the URI of a module by splitting `<module-path>` into `<path>?<name>`. If `<module-path>` does *not* contain a `?`-character, we consider it to be the `<name>`, and `<path>` to be empty.

If `<archive-ID>` is empty, it is automatically set to the ID of the current archive (if one exists).

1. If `<archive-ID>` is empty:

(a) If `<path>` is empty, then `<name>` must have been declared earlier in the same file and retrievable from `\g_stex_modules_in_file_seq`, or a file with name `<name>.<lang>.tex` must exist in the same folder, containing a module `<name>`. That module should have the same namespace as the current one.

(b) If `<path>` is not empty, it must point to the relative path of the containing file as well as the namespace.

2. Otherwise:

(a) If `<path>` is empty, then `<name>` must have been declared earlier in the same file and retrievable from `\g_stex_modules_in_file_seq`, or a file with name `<name>.<lang>.tex` must exist in the top `source` folder of the archive, containing a module `<name>`.

That module should lie directly in the namespace of the archive.

(b) If `<path>` is not empty, it must point to the path of the containing file as well as the namespace, relative to the namespace of the archive.

If a module by that namespace exists, it is returned. Otherwise, we call `\stex_require_module:nn` on the `source` directory of the archive to find the file.

`\stex_import_require_module:nnnn`

`{<ns>} {<archive-ID>} {<path>} {<name>}`

Checks whether a module with URI `<ns>?<name>` already exists. If not, it looks for a plausible file that declares a module with that URI.

Finally, activates that module by executing its `content`-field.

Chapter 14

TeX-Symbols

Code related to symbol declarations and notations

14.1 Macros and Environments

<code>\symdecl</code>	<code>\symdecl[⟨args⟩]{⟨macroname⟩}</code>
-----------------------	--

Declares a new symbol with semantic macro `\macroname`. Optional arguments are:

- **name**: An (OMDOC) name. By default equal to `⟨macroname⟩`.
- **type**: An (ideally semantic) term. Not used by TeX, but passed on to MMT for semantic services.
- **local**: A boolean (by default false). If set, this declaration will not be added to the module content, i.e. importing the current module will not make this declaration available.
- **args**: Specifies the “signature” of the semantic macro. Can be either an integer $0 \leq n \leq 9$, or a (more precise) sequence of the following characters:
 - i a “normal” argument, e.g. `\symdecl[args=ii]{plus}` allows for `\plus{2}{2}`.
 - a an *associative* argument; i.e. a sequence of arbitrarily many arguments provided as a comma-separated list, e.g. `\symdecl[args=a]{plus}` allows for `\plus{2,2,2}`.
 - b a *variable* argument. Is treated by TeX like an i-argument, but an application is turned into an OMBind in OMDoc, binding the provided variable in the subsequent arguments of the operator; e.g. `\symdecl[args=bi]{forall}` allows for `\forall{x\in\Nat}{x\geq0}`.

`\stex_symdecl_do:n`

Implements the core functionality of `\symdecl`, and is called by `\symdecl` and `\symdef`.

Ultimately stores the symbol $\langle URI \rangle$ in the property list `\l_stex_symdecl_⟨URI⟩_prop` with fields:

- `name` (string),
- `module` (string),
- `notations` (sequence of strings; initially empty),
- `local` (boolean),
- `type` (token list),
- `args` (string of `is`, `as` and `bs`),
- `arity` (integer string),
- `assocs` (integer string; number of associative arguments),

Test 11

```
\begin{module}{SymdeclTest}
\symdecl[name=foo, args=3]{bar}
\symdecl[name=foobar, args=iab]{bari}
\symdecl[def=\bar* abc]{bardef}
\ExplSyntaxOn
Meaning:~\present\bar\\
\stex_get_symbol:n { bar }
Result:~\l_stex_get_symbol_uri_str\\
Meaning:~\present\bardef\\
\ExplSyntaxOff
\end{module}
```

```
Module 14.1.1[SymdeclTest]
Meaning: >macro:->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?foo}<
Result: file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?foo
Meaning: >macro:->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?bardef}<
```

`\l_stex_all_symbols_seq`

Stores full URIs for all modules currently in scope.

`\stex_get_symbol:n`

Computes the full URI of a symbol from a macro argument, e.g. the macro name, the macro itself, the full URI...

`\notation`

`\notation[⟨args⟩]{⟨symbol⟩}{⟨notations+⟩}`

Introduces a new notation for $\langle symbol \rangle$, see `\stex_notation_do:nn`

`\stex_notation_do:nn`

`\stex_notation_do:nn{<URI>}{<notations+>}`

Implements the core functionality of `\notation`, and is called by `\notation` and `\symdef`.

Ultimately stores the notation in the property list `\g_stex_notation_<URI>#<variant>#<lang>_prop` with fields:

- symbol (URI string),
- language (string),
- variant (string),
- opprec (integer string),
- argprecs (sequence of integer strings)

Test 12

```
\begin{module}{NotationTest}
\importmodule{Foo}
\notation{foo, prec=500;20x20x20}{bar}{\comp\langle {#1} ^ {#2} _ {#3} \comp\rangle }
\notation{foo, prec=500;20x20x20}{foobar}{\comp\langle #1 \comp\mid [ #2 ] ^ {#3} \comp\rangle }{ {#1}_ {\com
```

Module 14.1.2[NotationTest]

`\symdef`

`\symdef[<args>]{<symbol>}{<notations+>}`

Combines `\symdecl` and `\notation` by introducing a new symbol and assigning a new notation for it.

Test 13

```
\begin{module}{SymdefTest}
\symdef[ args=a, prec=50]{ plus }{ #1 }{#1 \comp+ #2}
$\plus{ a,b,c }$
\end{module}
```

Module 14.1.3[SymdefTest]
 $a + b + c$

Chapter 15

STEX-Terms

Code related to symbolic expressions, typesetting notations, notation components, etc.

15.1 Macros and Environments

<hr/> <hr/> <code>\STEXsymbol</code>	Uses <code>\stex_get_symbol:n</code> to find the symbol denoted by the first argument and passes the result on to <code>\stex_invoke_symbol:n</code>
<hr/> <hr/> <code>\symref</code>	<code>\symref{<symbol>}{<text>}</code> shortcut for <code>\STEXsymbol{<symbol>}! [<text>]</code>
<hr/> <hr/> <code>\stex_invoke_symbol:n</code>	Executes a semantic macro. Outside of math mode or if followed by <code>*</code> , it continues to <code>\stex_term_custom:nn</code> . In math mode, it uses the default or optionally provided notation of the associated symbol. If followed by <code>!</code> , it will invoke the symbol <i>itself</i> rather than its application (and continue to <code>\stex_term_custom:nn</code>), i.e. it allows to refer to <code>\plus!</code> [addition] as an operation, rather than <code>\plus[addition of]{some}{terms}</code> .
<hr/> <hr/> <code>_stex_term_math_oms:nnnn</code> <code>_stex_term_math_oma:nnnn</code> <code>_stex_term_math_omb:nnnn</code>	<code><URI><fragment><precedence><body></code> Annotates <code><body></code> as an OMDOC-term (OMID, OMA or OMBIND, respectively) with head symbol <code><URI></code> , generated by the specific notation <code><fragment></code> with (upwards) operator precedence <code><precedence></code> . Inserts parentheses according to the current downwards precedence and operator precedence.
<hr/> <hr/> <code>_stex_term_math_arg:nnn</code>	<code>\stex_term_arg:nnn<int><prec><body></code> Annotates <code><body></code> as the <code><int></code> th argument of the current OMA or OMBIND, with (downwards) argument precedence <code><prec></code> .
<hr/> <hr/> <code>_stex_term_math_assoc_arg:nnnn</code>	<code>\stex_term_arg:nnn<int><prec><notation><body></code> Annotates <code><body></code> as the <code><int></code> th (associative) <i>sequence</i> argument (as comma-separated list of terms) of the current OMA or OMBIND, with (downwards) argument precedence <code><prec></code> and associative notation <code><notation></code> .

<hr/> <hr/>	<code>\infprec</code> <code>\neginfprec</code>	Maximal and minimal notation precedences.
<hr/> <hr/>	<code>\dobrackets</code>	<code>\dobrackets {⟨body⟩}</code> Puts <code>⟨body⟩</code> in parentheses; scaled if in display mode unscaled otherwise. Uses the current <code>SIEX</code> brackets (by default <code>(</code> and <code>)</code>), which can be changed temporarily using <code>\withbrackets</code> .
<hr/> <hr/>	<code>\withbrackets</code>	<code>\withbrackets ⟨left⟩ ⟨right⟩ {⟨body⟩}</code> Temporarily (i.e. within <code>⟨body⟩</code>) sets the brackets used by <code>SIEX</code> for automated bracketing (by default <code>(</code> and <code>)</code>) to <code>⟨left⟩</code> and <code>⟨right⟩</code> . Note that <code>⟨left⟩</code> and <code>⟨right⟩</code> need to be allowed after <code>\left</code> and <code>\right</code> in display-mode.

Test 14

```

\begin{module}{MathTest1}
\importmodule{Foo}
\notation[foo, prec=500;20x20x20]{bar}{\comp\langle {#1} ^ {#2} _{#3} \comp\rangle }
$\bar{abc}$ and $\bar{foo} abc$.
\end{module}

```

Module 15.1.1[MathTest1]
 $\langle a^b_c \rangle$ and $\langle a^b_c \rangle$.

Test 15

```

\begin{module}{MathTest2}
\importmodule{Foo}
\notation[foo, prec=500;20x20x20]{foobar}{\comp\langle #1 \comp\mid [ #2 ] ^{#3} \comp\rangle }{ {#1}_{\comp\langle #1 \comp\mid [ #2 ] ^{#3} \comp\rangle } }
$\foobar a{b,c,d,e,f}g$ and $\foobar[foo] a{b,c}g$ and $\foobar abc$

\symdecl[ args=a]{ plus }
\symdecl[ args=a]{ mult }
\notation[prec=50]{ plus }{#1}{#1 \comp+ #2}
\notation[prec=100]{ mult }{#1}{#1 \comp\cdot #2}
$\plus{a,\mult{b,c}}$ and $\mult{a,\plus{\frac{ab}{ac}}}$
$[\plus{a,\mult{b,c}}]\text{ and }\mult{a,\plus{\frac{ab}{ac}}}$
$\displaystyle \plus{a,\mult{b,c}}$ and
\withbrackets[]{$\displaystyle
\mult{a,\plus{\frac{ab}{ac}}}$}
\end{module}

```

Module 15.1.2[MathTest2]
 $\langle a \mid [b;c;d:e,f]^g \rangle$ and $\langle a \mid [b;c]^g \rangle$ and $\langle a \mid [b]^c \rangle$
 $a + (b \cdot c)$ and $a \cdot \frac{a}{b} + \frac{a}{c}$
 $a + (b \cdot c)$ and $a \cdot \frac{a}{b} + \frac{a}{c}$

`\stex_term_custom:nn`

`\stex_term_custom:nn{<URI>}{<args>}`

Implements custom one-time notation. Invoked by `\stex_invoke_symbol:n` in text mode, or if followed by `*` in math mode, or whenever followed by `!`.

Test 16

```
\begin{module}{TextTest}
\importmodule{Foo}

\bar[some ]a[ and some ]b[ and also some ]c[ here].

$\bar*[\text{some }]a[\text{ and some }]b[\text{ and also some }]c[\text{ here}]\$.

$\bar![\mathtt{bar}]\$

\bar*{a}*{b}[or just some ]c

\bar![bar]

\bar[or first ]*[2]{b}[ , then ]*[3]{c}[ , and finally ]a

\end{module}
```

```
Module 15.1.3[TextTest]
  some a and some b and also some c here.
  some a and some b and also some c here.
  bar
  or just some c
  bar
  or first b, then c, and finally a
```

`\stex_highlight_term:nn`

`\stex_highlight_term:nn{<URI>}{<args>}`

Establishes a context for `\comp`. Stores the URI in a variable so that `\comp` knows which symbol governs the current notation.

`\comp`

`\comp{<args>}`

`\compemph`

`\compemph@uri`

`\defemph`

`\defemph@uri`

`\symrefemph`

`\symrefemph@uri`

Marks `<args>` as a notation component of the current symbol for highlighting, linking, etc.

The precise behavior is governed by `\@comp`, which takes as additional argument the URI of the current symbol. By default, `\@comp` adds the URI as a PDF tooltip and colors the highlighted part in blue.

`\@defemph` behaves like `\@comp`, and can be similarly redefined, but marks an expression as *definiendum* (used by `\definiendum`)

`\STEXinvisible`

Exports its argument as OMDOC (invisible), but does not produce PDF output. Useful e.g. for semantic macros that take arguments that are not part of the symbolic notation.

sTeX-Proofs: Structural Markup for Proofs

The `sproof` package is part of the sTeX collection, a version of T_EX/L^AT_EX that allows to markup T_EX/L^AT_EX documents semantically without leaving the document format, essentially turning T_EX/L^AT_EX into a document format for mathematical knowledge management (MKM).

This package supplies macros and environment that allow to annotate the structure of mathematical proofs in sTeX files. This structure can be used by MKM systems for added-value services, either directly from the sTeX sources, or after translation.

Contents

18.1 Introduction

The `sproof` (semantic proofs) package supplies macros and environment that allow to annotate the structure of mathematical proofs in \LaTeX files. This structure can be used by MKM systems for added-value services, either directly from the \LaTeX sources, or after translation. Even though it is part of the \LaTeX collection, it can be used independently, like its sister package `statements`.

\LaTeX is a version of $\text{\TeX}/\text{\LaTeX}$ that allows to markup $\text{\TeX}/\text{\LaTeX}$ documents semantically without leaving the document format, essentially turning $\text{\TeX}/\text{\LaTeX}$ into a document format for mathematical knowledge management (MKM).

```
\begin{sproof}[id=simple-proof,for=sum-over-odds]
  {We prove that  $\sum_{i=1}^n (2i-1) = n^2$  by induction over  $n$ }
  \begin{spfcase}{For the induction we have to consider the following cases:}
    \begin{spfcase}{ $n=1$ }
      \begin{spfstep}[display=flow] then we compute  $1=1^2$ \end{spfstep}
    \end{spfcase}
    \begin{spfcase}{ $n=2$ }
      \begin{sproofcomment}[display=flow]
        This case is not really necessary, but we do it for the
        fun of it (and to get more intuition).
      \end{sproofcomment}
      \begin{spfstep}[display=flow] We compute  $1+3=2^2=4$ .\end{spfstep}
    \end{spfcase}
    \begin{spfcase}{ $n>1$ }
      \begin{spfstep}[type=assumption,id=ind-hyp]
        Now, we assume that the assertion is true for a certain  $k \geq 1$ ,
        i.e.  $\sum_{i=1}^k (2i-1) = k^2$ $.
      \end{spfstep}
      \begin{sproofcomment}
        We have to show that we can derive the assertion for  $n=k+1$  from
        this assumption, i.e.  $\sum_{i=1}^{k+1} (2i-1) = (k+1)^2$ $.
      \end{sproofcomment}
      \begin{spfstep}
        We obtain  $\sum_{i=1}^{k+1} (2i-1) = \sum_{i=1}^k (2i-1) + 2(k+1) - 1$ 
        \begin{justification}[method=arith:split-sum]
          by splitting the sum.
        \end{justification}
      \end{spfstep}
      \begin{spfstep}
        Thus we have  $\sum_{i=1}^{k+1} (2i-1) = k^2 + 2k + 1$ 
        \begin{justification}[method=fertilize]
          by inductive hypothesis.
        \end{justification}
      \end{spfstep}
      \begin{spfstep}[type=conclusion]
        We can \begin{justification}[method=simplify]simplify\end{justification}
        the right-hand side to  $(k+1)^2$ , which proves the assertion.
      \end{spfstep}
    \end{spfcase}
    \begin{spfstep}[type=conclusion]
      We have considered all the cases, so we have proven the assertion.
    \end{spfstep}
  \end{spfcase}
\end{sproof}
```

Example 1: A very explicit proof, marked up semantically

We will go over the general intuition by way of our running example (see Figure 1 for the source and Figure 2 for the formatted result).⁷

⁷EDNOTE: talk a bit more about proofs and their structure,... maybe copy from OMDoc spec.

18.2 The User Interface

18.2.1 Package Options

`showmeta` The `sproof` package takes a single option: `showmeta`. If this is set, then the metadata keys are shown (see [Kohlhase:metakeys] for details and customization options).

18.2.2 Proofs and Proof steps

`sproof` The `proof` environment is the main container for proofs. It takes an optional `KeyVal` argument that allows to specify the `id` (identifier) and `for` (for which assertion is this a proof) keys. The regular argument of the `proof` environment contains an introductory comment, that may be used to announce the proof style. The `proof` environment contains a sequence of `\step`, `proofcomment`, and `pfcases` environments that are used to markup the proof steps. The `proof` environment has a variant `Proof`, which does not use the proof end marker. This is convenient, if a proof ends in a case distinction, which brings it's own proof end marker with it. The `Proof` environment is a variant of `proof` that does not mark the end of a proof with a little box; presumably, since one of the subproofs already has one and then a box supplied by the outer proof would generate an otherwise empty line. The `\spfidea` macro allows to give a one-paragraph description of the proof idea.

`spfsketch` For one-line proof sketches, we use the `\spfsketch` macro, which takes the `KeyVal` argument as `sproof` and another one: a natural language text that sketches the proof.

`spfstep` Regular proof steps are marked up with the `step` environment, which takes an optional `KeyVal` argument for annotations. A proof step usually contains a local assertion (the text of the step) together with some kind of evidence that this can be derived from already established assertions.

Note that both `\premise` and `\justarg` can be used with an empty second argument to mark up premises and arguments that are not explicitly mentioned in the text.

18.2.3 Justifications

`justification` This evidence is marked up with the `justification` environment in the `sproof` package. This environment totally invisible to the formatted result; it wraps the text in the proof step that corresponds to the evidence. The environment takes an optional `KeyVal` argument, which can have the `method` key, whose value is the name of a proof method (this will only need to mean something to the application that consumes the semantic annotations). Furthermore, the justification can contain “premises” (specifications to assertions that were used justify the step) and “arguments” (other information taken into account by the proof method).

`\premise` The `\premise` macro allows to mark up part of the text as reference to an assertion that is used in the argumentation. In the example in Figure 1 we have used the `\premise` macro to identify the inductive hypothesis.

`\justarg` The `\justarg` macro is very similar to `\premise` with the difference that it is used to mark up arguments to the proof method. Therefore the content of the first argument is interpreted as a mathematical object rather than as an identifier as in the case of `\premise`. In our example, we specified that the simplification should take place on the right hand side of the equation. Other examples include proof methods that instantiate. Here we would indicate the substituted object in a `\justarg` macro.

Proof: We prove that $\sum_{i=1}^n 2i - 1 = n^2$ by induction over n

P.1 For the induction we have to consider the following cases:

P.1.1 $n = 1$: then we compute $1 = 1^2$ □

P.1.1 $n = 2$: This case is not really necessary, but we do it for the fun of it (and to get more intuition). We compute $1 + 3 = 2^2 = 4$ □

P.1.1 $n > 1$:

P.1.1.1 Now, we assume that the assertion is true for a certain $k \geq 1$, i.e. $\sum_{i=1}^k (2i - 1) = k^2$.

P.1.1.1 We have to show that we can derive the assertion for $n = k + 1$ from this assumption, i.e. $\sum_{i=1}^{k+1} (2i - 1) = (k + 1)^2$.

P.1.1.1 We obtain $\sum_{i=1}^{k+1} (2i - 1) = \sum_{i=1}^k (2i - 1) + 2(k + 1) - 1$ by splitting the sum

P.1.1.1 Thus we have $\sum_{i=1}^{k+1} (2i - 1) = k^2 + 2k + 1$ by inductive hypothesis.

P.1.1.1 We can simplify the right-hand side to $(k + 1)^2$, which proves the assertion. □

P.1.1 We have considered all the cases, so we have proven the assertion. □

Example 2: The formatted result of the proof in Figure 1

18.2.4 Proof Structure

subproof	The pfcases environment is used to mark up a subproof. This environment takes an optional KeyVal argument for semantic annotations and a second argument that allows to specify an introductory comment (just like in the proof environment). The method key can be used to give the name of the proof method executed to make this subproof.
method	
spfcases	The pfcases environment is used to mark up a proof by cases. Technically it is a variant of the subproof where the method is by-cases . Its contents are spfcase environments that mark up the cases one by one.
spfcase	The content of a pfcases environment are a sequence of case proofs marked up in the pfcase environment, which takes an optional KeyVal argument for semantic annotations. The second argument is used to specify the the description of the case under consideration. The content of a pfcase environment is the same as that of a proof , i.e. steps , proofcomments , and pfcases environments. \spfcasesketch is a variant of the spfcase environment that takes the same arguments, but instead of the spfsteps in the body uses a third argument for a proof sketch.
\spfcasesketch	
sproofcomment	The proofcomment environment is much like a step , only that it does not have an object-level assertion of its own. Rather than asserting some fact that is relevant for the proof, it is used to explain where the proof is going, what we are attempting to to, or what we have achieved so far. As such, it cannot be the target of a \premise .

\proofend \end{proof} \end{document}

The `sproof` package provides the `\sproofend` macro for this. If a different symbol for the proof end is to be used (e.g. *q.e.d*), then this can be obtained by specifying it using the `\sProofEndSymbol` configuration macro (e.g. by specifying `\sProofEndSymbol{q.e.d}`).

Figure 2: Configuration Proof Step Label Styles

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the `sTeX` issue tracker at [\[sTeX\]](#).

⁸EDNOTE: we might want to develop an extension sproof-babel in the future.

1. The numbering scheme of proofs cannot be changed. It is more geared for teaching proof structures (the author's main use case) and not for writing papers. reported by Tobias Pfeiffer (fixed)
2. currently proof steps are formatted by the L^AT_EX `description` environment. We would like to configure this, e.g. to use the `inparaenum` environment for more condensed proofs. I am just not sure what the best user interface would be I can imagine redefining an internal environment `spf@proofstep@list` or adding a key `prooflistenv` to the `proof` environment that allows to specify the environment directly. Maybe we should do both.

Chapter 19

sTeX-Metatheory

The default meta theory for an sTeX module. Contains symbols so ubiquitous, that it is virtually impossible to describe any flexiformal content without them, or that are required to annotate even the most primitive symbols with meaningful (foundation-independent) “type”-annotations, or required for basic structuring principles (theorems, definitions).

Foundations should ideally instantiate these symbols with their formal counterparts, e.g. `isa` corresponds to a typing operation in typed setting, or the \in -operator in set-theoretic contexts; `bind` corresponds to a universal quantifier in (n th-order) logic, or a Π in dependent type theories.

Chapter 21

document-structure.sty: Semantic Markup for Open Mathematical Documents in L^AT_EX

The `omdoc` package is part of the $\S\mathrm{T}_{\mathrm{E}}\mathrm{X}$ collection, a version of $\mathrm{T}_{\mathrm{E}}\mathrm{X}/\mathrm{L}^{\mathrm{A}}\mathrm{T}_{\mathrm{E}}\mathrm{X}$ that allows to markup $\mathrm{T}_{\mathrm{E}}\mathrm{X}/\mathrm{L}^{\mathrm{A}}\mathrm{T}_{\mathrm{E}}\mathrm{X}$ documents semantically without leaving the document format, essentially turning $\mathrm{T}_{\mathrm{E}}\mathrm{X}/\mathrm{L}^{\mathrm{A}}\mathrm{T}_{\mathrm{E}}\mathrm{X}$ into a document format for mathematical knowledge management (MKM).

This package supplies an infrastructure for writing OMDOC documents in $\mathrm{L}^{\mathrm{A}}\mathrm{T}_{\mathrm{E}}\mathrm{X}$. This includes a simple structure sharing mechanism for $\S\mathrm{T}_{\mathrm{E}}\mathrm{X}$ that allows to move from a copy-and-paste document development model to a copy-and-reference model, which conserves space and simplifies document management. The augmented structure can be used by MKM systems for added-value services, either directly from the $\S\mathrm{T}_{\mathrm{E}}\mathrm{X}$ sources, or after translation.

21.1 Introduction

$\S\mathrm{T}_{\mathrm{E}}\mathrm{X}$ is a version of $\mathrm{T}_{\mathrm{E}}\mathrm{X}/\mathrm{L}^{\mathrm{A}}\mathrm{T}_{\mathrm{E}}\mathrm{X}$ that allows to markup $\mathrm{T}_{\mathrm{E}}\mathrm{X}/\mathrm{L}^{\mathrm{A}}\mathrm{T}_{\mathrm{E}}\mathrm{X}$ documents semantically without leaving the document format, essentially turning $\mathrm{T}_{\mathrm{E}}\mathrm{X}/\mathrm{L}^{\mathrm{A}}\mathrm{T}_{\mathrm{E}}\mathrm{X}$ into a document format for mathematical knowledge management (MKM). The package supports direct translation to the OMDOC format [Koh06]

The `omdoc` package supplies macros and environments that allow to label document fragments and to reference them later in the same document or in other documents. In essence, this enhances the document-as-trees model to documents-as-directed-acyclic-graphs (DAG) model. This structure can be used by MKM systems for added-value services, either directly from the $\S\mathrm{T}_{\mathrm{E}}\mathrm{X}$ sources, or after translation. Currently, trans-document referencing provided by this package can only be used in the $\S\mathrm{T}_{\mathrm{E}}\mathrm{X}$ collection.

DAG models of documents allow to replace the “Copy and Paste” in the source document with a label-and-reference model where document are shared in the document

21.2 The User Interface

The `omdoc` package generates two files: `omdoc.cls`, and `omdoc.sty`. The `OMDOC` class is a minimally changed variant of the standard `article` class that includes the functionality provided by `omdoc.sty`. The rest of the documentation pertains to the functionality introduced by `omdoc.sty`.

21.2.1 Package and Class Options

The `omdoc` class accept the following options:

<code>class=<name></code>	load <code><name>.cls</code> instead of <code>article.cls</code>
<code>topsect=<sect></code>	The top-level sectioning level; the default for <code><sect></code> is <code>section</code>
<code>showignores</code>	show the the contents of the <code>ignore</code> environment after all
<code>showmeta</code>	show the metadata; see <code>metakeys.sty</code>
<code>showmods</code>	show modules; see <code>modules.sty</code>
<code>extrefs</code>	allow external references; see <code>sref.sty</code>
<code>defindex</code>	index definienda; see <code>statements.sty</code>
<code>minimal</code>	for testing; do not load any \TeX packages

The `omdoc` package accepts the same except the first two.

21.2.2 Document Structure

document

\documentkeys

id

omgroup

id

creators

contributors

short

loadmodules

The top-level `document` environment can be given key/value information by the `\documentkeys` macro in the preamble². This can be used to give metadata about the document. For the moment only the `id` key is used to give an identifier to the `omdoc` element resulting from the \LaTeX ML transformation.

The structure of the document is given by the `omgroup` environment just like in `OMDOC`. In the \LaTeX route, the `omgroup` environment is flexibly mapped to sectioning commands, inducing the proper sectioning level from the nesting of `omgroup` environments. Correspondingly, the `omgroup` environment takes an optional key/value argument for metadata followed by a regular argument for the (section) title of the `omgroup`. The optional metadata argument has the keys `id` for an identifier, `creators` and `contributors` for the Dublin Core metadata [DCM03]; see [Koh20a] for details of the format. The `short` allows to give a short title for the generated section. If the title contains semantic macros, they need to be protected by `\protect`, and we need to give the `loadmodules` key it needs no value. For instance we would have

```

\begin{module}{foo}
\symdef{bar}{B^a_r}
...
\begin{omgroup}[id=sec.barderiv,loadmodules]{Introducing $\protect\bar$ Derivations}

```

\TeX automatically computes the sectioning level, from the nesting of `omgroup` environments. But sometimes, we want to skip levels (e.g. to use a subsection* as an introduction for a chapter). Therefore the `omdoc` package provides a variant `blindomgroup`

⁹EDNOTE: integrate with latexml's XMRef in the Math mode.
²We cannot patch the document environment to accept an optional argument, since other packages we load already do; pity.

that does not produce markup, but increments the sectioning level and logically groups document parts that belong together, but where traditional document markup relies on convention rather than explicit markup. The `blindomgroup` environment is useful e.g. for creating frontmatter at the correct level. Example 3 shows a typical setup for the outer document structure of a book with parts and chapters. We use two levels of `blindomgroup`:

- The outer one groups the introductory parts of the book (which we assume to have a sectioning hierarchy topping at the part level). This `blindomgroup` makes sure that the introductory remarks become a “chapter” instead of a “part”.
- The inner one groups the frontmatter³ and makes the preface of the book a section-level construct. Note that here the `display=flow` on the `omgroup` environment prevents numbering as is traditional for prefaces.

```
\begin{document}
\begin{blindomgroup}
\begin{blindomgroup}
\begin{frontmatter}
\maketitle\newpage
\begin{omgroup}[display=flow]{Preface}
... <<preface>> ...
\end{omgroup}
\clearpage\setcounter{tocdepth}{4}\tableofcontents\clearpage
\end{frontmatter}
\end{blindomgroup}
... <<introductory remarks>> ...
\end{blindomgroup}
\begin{omgroup}{Introduction}
... <<intro>> ...
\end{omgroup}
... <<more chapters>> ...
\bibliographystyle{alpha}\bibliography{kwarc}
\end{document}
```

Example 3: A typical Document Structure of a Book

`\skipomgroup`

The `\skipomgroup` “skips an `omgroup`”, i.e. it just steps the respective sectioning counter. This macro is useful, when we want to keep two documents in sync structurally, so that section numbers match up: Any section that is left out in one becomes a `\skipomgroup`.

`\currentsectionlevel`

`\CurrentSectionLevel`

The `\currentsectionlevel` macro supplies the name of the current sectioning level, e.g. “chapter”, or “subsection”. `\CurrentSectionLevel` is the capitalized variant. They are useful to write something like “In this `\currentsectionlevel`, we will...” in an `omgroup` environment, where we do not know which sectioning level we will end up.

21.2.3 Ignoring Inputs

`ignore`
`showignores`

The `ignore` environment can be used for hiding text parts from the document structure. The body of the environment is not PDF or DVI output unless the `showignores` option

³We shied away from redefining the `frontmatter` to induce a `blindomgroup`, but this may be the “right” way to go in the future.

is given to the `omdoc` class or `package`. But in the generated OMDoc result, the body is marked up with a `ignore` element. This is useful in two situations. For

editing One may want to hide unfinished or obsolete parts of a document

narrative/content markup In \LaTeX we mark up narrative-structured documents. In the generated OMDoc documents we want to be able to cache content objects that are not directly visible. For instance in the `statements` package [Koh20d] we use the `\inlinedef` macro to mark up phrase-level definitions, which verbalize more formal definitions. The latter can be hidden by an `ignore` and referenced by the `verbalizes` key in `\inlinedef`.

For prematurely stopping the formatting of a document, \LaTeX provides the `\prematurestop` macro. It can be used everywhere in a document and ignores all input after that – backing out of the `omgroup` environment as needed. After that – and before the implicit `\end{document}` it calls the internal `\afterprematurestop`, which can be customized to do additional cleanup or e.g. print the bibliography.

`\prematurestop` is useful when one has a driver file, e.g. for a course taught multiple years and wants to generate course notes up to the current point in the lecture. Instead of commenting out the remaining parts, one can just move the `\prematurestop` macro. This is especially useful, if we need the rest of the file for processing, e.g. to generate a theory graph of the whole course with the already-covered parts marked up as an overview over the progress; see `import_graph.py` from the `lmhtools` utilities [LMH].

21.2.4 Structure Sharing

`\STRlabel` The `\STRlabel` macro takes two arguments: a label and the content and stores the content for later use by `\STRcopy` [`\URL`]{`label`}, which expands to the previously stored content. If the `\STRlabel` macro was in a different file, then we can give a URL [`\URL`] that lets \LaTeX ML generate the correct reference.

`\STRsemantics` The `\STRlabel` macro has a variant `\STRsemantics`, where the label argument is optional, and which takes a third argument, which is ignored in \LaTeX . This allows to specify the meaning of the content (whatever that may mean) in cases, where the source document is not formatted for presentation, but is transformed into some content markup format.¹⁰

21.2.5 Global Variables

Text fragments and modules can be made more re-usable by the use of global variables. For instance, the admin section of a course can be made course-independent (and therefore re-usable) by using variables (actually token registers) `courseAcronym` and `courseTitle` instead of the text itself. The variables can then be set in the \LaTeX preamble of the course notes file. `\setSGvar`{`vname`}{`text`} to set the global variable `vname` to `text` and `\useSGvar`{`vname`} to reference it.

With `\ifSGvar` we can test for the contents of a global variable: the macro call `\ifSGvar`{`vname`}{`val`}{`ctext`} tests the content of the global variable `vname`, only if (after expansion) it is equal to `val`, the conditional text `ctext` is formatted.

¹⁰EdNOTE: document LMID und LMXRef here if we decide to keep them.

21.2.6 Colors

For convenience, the `omdoc` package defines a couple of color macros for the `color` package: For instance `\blue` abbreviates `\textcolor{blue}`, so that `\blue{<something>}` writes *<something>* in blue. The macros `\red`, `\green`, `\cyan`, `\magenta`, `\brown`, `\yellow`, `\orange`, `\gray`, and finally `\black` are analogous.

21.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the `TeX` GitHub repository [\[sTeX\]](#).

1. when option `book` which uses `\pagestyle{headings}` is given and semantic macros are given in the `omgroup` titles, then they sometimes are not defined by the time the heading is formatted. Need to look into how the headings are made.

Chapter 22

Slides and Course Notes

We present a document class from which we can generate both course slides and course notes in a transparent way.

22.1 Introduction

The `mikoslides` document class is derived from `beamer.cls` [Tana], it adds a “notes version” for course notes derived from the `omdoc` class [Kohlhase:smomdl] that is more suited to printing than the one supplied by `beamer.cls`.

22.2 The User Interface

The `mikoslides` class takes the notion of a slide frame from Till Tantau’s excellent `beamer` class and adapts its notion of frames for use in the \TeX and OMDoc. To support semantic course notes, it extends the notion of mixing frames and explanatory text, but rather than treating the frames as images (or integrating their contents into the flowing text), the `mikoslides` package displays the slides as such in the course notes to give students a visual anchor into the slide presentation in the course (and to distinguish the different writing styles in slides and course notes).

In practice we want to generate two documents from the same source: the slides for presentation in the lecture and the course notes as a narrative document for home study. To achieve this, the `mikoslides` class has two modes: *slides mode* and *notes mode* which are determined by the package option.

22.2.1 Package Options

The `mikoslides` class takes a variety of class options:¹¹

- | | |
|---------------------------|--|
| <code>slides</code> | <ul style="list-style-type: none">• The options <code>slides</code> and <code>notes</code> switch between slides mode and notes mode (see Section 22.2.2). |
| <code>notes</code> | |
| <code>sectocframes</code> | <ul style="list-style-type: none">• If the option <code>sectocframes</code> is given, then for the <code>omgroups</code>, special frames with the <code>omgroup</code> title (and number) are generated. |

EdN:11

<code>showmeta</code>	<ul style="list-style-type: none"> • <code>showmeta</code>. If this is set, then the metadata keys are shown (see [Koh20b] for details and customization options).
<code>frameimages</code> <code>fiboxed</code>	<ul style="list-style-type: none"> • If the option <code>frameimages</code> is set, then slide mode also shows the <code>\frameimage</code>-generated frames (see section 22.2.4). If also the <code>fiboxed</code> option is given, the slides are surrounded by a box.
<code>topsect</code>	<ul style="list-style-type: none"> • <code>topsect=<sect></code> can be used to specify the top-level sectioning level; the default for <code><sect></code> is <code>section</code>.

22.2.2 Notes and Slides

`frame` Slides are represented with the `frame` just like in the `beamer` class, see [Tanb] for details.
`note` The `mikoslides` class adds the `note` environment for encapsulating the course note fragments.⁴

⚠ Note that it is essential to start and end the `notes` environment at the start of the line – in particular, there may not be leading blanks – else L^AT_EX becomes confused and throws error messages that are difficult to decipher.

```
\ifnotes\maketitle\else
\frame[noframenumbering]\maketitle\fi

\begin{note}
  We start this course with ...
\end{note}

\begin{frame}
  \frametitle{The first slide}
  ...
\end{frame}
\begin{note}
  ... and more explanatory text
\end{note}

\begin{frame}
  \frametitle{The second slide}
  ...
\end{frame}
...
```

Example 4: A typical Course Notes File

By interleaving the `frame` and `note` environments, we can build course notes as shown in Figure 4.

`\ifnotes` Note the use of the `\ifnotes` conditional, which allows different treatment between `notes` and `slides` mode – manually setting `\notesttrue` or `\notesfalse` is strongly discouraged however.

¹¹EDNOTE: leaving out `noproblems` for the moment until we decide what to do with it.

⁴MK: it would be very nice, if we did not need this environment, and this should be possible in principle, but not without intensive L^AT_EX trickery. Hints to the author are welcome.

⚠: We need to give the title frame the `noframenumbering` option so that the frame numbering is kept in sync between the slides and the course notes.

⚠: The `beamer` class recommends not to use the `allowframebreaks` option on frames (even though it is very convenient). This holds even more in the `mikoslides` case: At least in conjunction with `\newpage`, frame numbering behaves funnily (we have tried to fix this, but who knows).

If we want to transclude a the contents of a file as a note, we can use a new variant `\inputref*` of the `\inputref` macro from [KGA20]: `\inputref*{foo}` is equivalent to `\begin{note}\inputref{foo}\end{note}`.

There are some environments that tend to occur at the top-level of `note` environments. We make convenience versions of these: e.g. the `nomtext` environment is just an `omtext` inside a `note` environment (but looks nicer in the source, since it avoids one level of source indenting). Similarly, we have the `nomgroup`, `ndefinition`, `nexample`, `nsproof`, and `nassertion` environments.

22.2.3 Header and Footer Lines of the Slides

The default logo provided by the `mikoslides` package is the \LaTeX logo it can be customized using `\setslidelogo{<logo name>}`.

The default footer line of the `mikoslides` package mentions copyright and licensing. In the `beamer` class, `\source` stores the author's name as the copyright holder. By default it is *Michael Kohlhase* in the `mikoslides` package since he is the main user and designer of this package. `\setsource{<name>}` can change the writer's name. For licensing, we use the Creative Commons Attribution-ShareAlike license by default to strengthen the public domain. If package `hyperref` is loaded, then we can attach a hyperlink to the license logo. `\setlicensing[<url>]{<logo name>}` is used for customization, where `<url>` is optional.

22.2.4 Frame Images

Sometimes, we want to integrate slides as images after all – e.g. because we already have a PowerPoint presentation, to which we want to add \LaTeX notes. In this case we can use `\frameimage[<opt>]{<path>}`, where `<opt>` are the options of `\includegraphics` from the `graphicx` package [CR99] and `<path>` is the file path (extension can be left off like in `\includegraphics`). We have added the `label` key that allows to give a frame label that can be referenced like a regular `beamer` frame.¹²

The `\mhframeimage` macro is a variant of `\frameimage` with repository support. Instead of writing

```
\frameimage{\MathHub{fooMH/bar/source/baz/foobar}}
```

we can simply write (assuming that `\MathHub` is defined as above)

```
\mhframeimage[fooMH/bar]{baz/foobar}
```

Note that the `\mhframeimage` form is more semantic, which allows more advanced document management features in `MathHub`.

If `baz/foobar` is the “current module”, i.e. if we are on the `MathHub` path `...MathHub/fooMH/bar...`, then stating the repository in the first optional argument is redundant, so we can just use

¹²EDNOTE: MK: the `hyperref` link does not seem to work yet. I wonder why but do not have the time to fix it.

`\mhframeimage{baz/foobar}`

22.2.5 Colors and Highlighting

`\textwarning` The `\textwarning` macro generates a warning sign: 

22.2.6 Front Matter, Titles, etc.

22.2.7 Excursions

In course notes, we sometimes want to point to an “excursion” – material that is either presupposed or tangential to the course at the moment – e.g. in an appendix. The typical setup is the following:

```
\excursion{founif}{../ex/founif}{We will cover first-order unification in}
...
\begin{appendix}\printexcursions\end{appendix}
```

```
\excursion      The \excursion{<ref>}{<path>}{<text>} is syntactic sugar for
\activateexcursion
\begin{nomtext}[title=Excursion]
  \activateexcursion{founif}{../ex/founif}
  We will cover first-order unification in \sref{founif}.
\end{nomtext}
```

```
\activateexcursion  where \activateexcursion{<path>} augments the \printexcursions macro by a
\printexcursions    call \inputref{<path>}. In this way, the3 \printexcursions macro (usually in the
                    appendix) will collect up all excursions that are specified in the main text.
```

Sometimes, we want to reference – in an excursion – part of another. We can use

```
\excursionref \excursionref{<label>} for that.
```

Finally, we usually want to put the excursions into an `omgroup` environment and add an introduction, therefore we provide the a variant of the `\printexcursions` macro:

```
\excursiongroup \excursiongroup[id=<id>,intro=<path>] is equivalent to
```

```
\begin{note}
\begin{omgroup}[id=<id>]{Excursions}
  \inputref{<path>}
  \printexcursions
\end{omgroup}
\end{note}
```

22.2.8 Miscellaneous

22.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the [sTeXGitHub](#) repository [[sTeX](#)].

1. when option `book` which uses `\pagestyle{headings}` is given and semantic macros are given in the `omgroup` titles, then they sometimes are not defined by the time the heading is formatted. Need to look into how the headings are made. This is a problem of the underlying `omdoc` package.

Chapter 23

problem.sty: An Infrastructure for formatting Problems

The `problem` package supplies an infrastructure that allows specify problems and to reuse them efficiently in multiple environments.

23.1 Introduction

The `problem` package supplies an infrastructure that allows specify problem. Problems are text fragments that come with auxiliary functions: hints, notes, and solutions⁵. Furthermore, we can specify how long the solution to a given problem is estimated to take and how many points will be awarded for a perfect solution.

Finally, the `problem` package facilitates the management of problems in small files, so that problems can be re-used in multiple environment.

23.2 The User Interface

23.2.1 Package Options

<code>solutions</code>	The <code>problem</code> package takes the options <code>solutions</code> (should solutions be output?), <code>notes</code>
<code>notes</code>	(should the problem notes be presented?), <code>hints</code> (do we give the hints?), <code>gnotes</code> (do we
<code>hints</code>	show grading notes?), <code>pts</code> (do we display the points awarded for solving the problem?),
<code>gnotes</code>	<code>min</code> (do we display the estimated minutes for problem soling). If theses are specified, then
<code>pts</code>	the corresponding auxiliary parts of the problems are output, otherwise, they remain
<code>min</code>	invisible.
<code>boxed</code>	The <code>boxed</code> option specifies that problems should be formatted in framed boxes so
<code>test</code>	that they are more visible in the text. Finally, the <code>test</code> option signifies that we are in
	a test situation, so this option does not show the solutions (of course), but leaves space
	for the students to solve them.
<code>mh</code>	The <code>mh</code> option turns on MathHub support; see [<code>Kohlhase:mss</code>].
<code>showmeta</code>	Finally, if the <code>showmeta</code> is set, then the metadata keys are shown (see [<code>Kohlhase:metakeys</code>]
	for details and customization options).

⁵for the moment multiple choice problems are not supported, but may well be in a future version

23.2.2 Problems and Solutions

problem The main environment provided by the **problem** package is (surprise surprise) the **problem** environment. It is used to mark up problems and exercises. The environment takes an optional KeyVal argument with the keys **id** as an identifier that can be reference later, **pts** for the points to be gained from this exercise in homework or quiz situations, **min** for the estimated minutes needed to solve the problem, and finally **title** for an informative title of the problem. For an example of a marked up problem see Figure 5 and the resulting markup see Figure 6.

```
\usepackage[solutions,hints,pts,min]{problem}
\begin{document}
  \begin{problem}[id=elephants,pts=10,min=2,title=Fitting Elephants]
    How many Elephants can you fit into a Volkswagen beetle?
  \begin{hint}
    Think positively, this is simple!
  \end{hint}
  \begin{exnote}
    Justify your answer
  \end{exnote}
  \begin{solution}[for=elephants,height=3cm]
    Four, two in the front seats, and two in the back.
  \begin{gnote}
    if they do not give the justification deduct 5 pts
  \end{gnote}
  \end{solution}
  \end{problem}
\end{document}
```

Example 5: A marked up Problem

solution The **solution** environment can be to specify a solution to a problem. If the **solutions** option is set or **\solutionstrue** is set in the text, then the solution will be presented in the output. The **solution** environment takes an optional KeyVal argument with the keys **id** for an identifier that can be reference **for** to specify which problem this is a solution for, and **height** that allows to specify the amount of space to be left in test situations (i.e. if the **test** option is set in the **\usepackage** statement).

```
Problem0.0 ()
How many Elephants can you fit into a Volkswagen beetle?

---

Hint: Think positively, this is simple!

---

Note:Justify your answer

---

Solution: Four, two in the front seats, and two in the back.

---

```

Example 6: The Formatted Problem from Figure 5

hint The **hint** and **exnote** environments can be used in a **problem** environment to give hints and to make notes that elaborate certain aspects of the problem.
exnote
gnote The **gnote** (grading notes) environment can be used to document situations that

may arise in grading.

Sometimes we would like to locally override the `solutions` option we have given to the package. To turn on solutions we use the `\startsolutions`, to turn them off, `\stopsolutions`. These two can be used at any point in the documents.

Also, sometimes, we want content (e.g. in an exam with master solutions) conditional on whether solutions are shown. This can be done with the `\ifsolutions` conditional.

23.2.3 Multiple Choice Blocks

Multiple choice blocks can be formatted using the `mcb` environment, in which single choices are marked up with `\mcc[⟨keyvals⟩]{⟨text⟩}` macro, which takes an optional key/value argument `⟨keyvals⟩` for choice metadata and a required argument `⟨text⟩` for the proposed answer text. The following keys are supported

- `T` • `T` for true answers, `F` for false ones,
- `F` • `Ttext` the verdict for true answers, `Ftext` for false ones, and
- `Ttext` • `feedback` for a short feedback text given to the student.
- `Ftext`
- `feedback`

See Figure ?? for an example

23.2.4 Including Problems

The `\includeproblem` macro can be used to include a problem from another file. It takes an optional `KeyVal` argument and a second argument which is a path to the file containing the problem (the macro assumes that there is only one problem in the include file). The keys `title`, `min`, and `pts` specify the problem title, the estimated minutes for solving the problem and the points to be gained, and their values (if given) overwrite the ones specified in the `problem` environment in the included file.

23.2.5 Reporting Metadata

The sum of the points and estimated minutes (that we specified in the `pts` and `min` keys to the `problem` environment or the `\includeproblem` macro) to the log file and the screen after each run. This is useful in preparing exams, where we want to make sure that the students can indeed solve the problems in an allotted time period.

The `\min` and `\pts` macros allow to specify (i.e. to print to the margin) the distribution of time and reward to parts of a problem, if the `pts` and `pts` package options are set. This allows to give students hints about the estimated time and the points to be awarded.

23.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the `STEXGitHub` repository [[sTeX](#)].

1. none reported yet

```

\begin{problem}[title=Functions]
  What is the keyword to introduce a function definition in python?
  \begin{mcb}
    \mcc[T]{def}
    \mcc[F,feedback=that is for C and C++){function}
    \mcc[F,feedback=that is for Standard ML]{fun}
    \mcc[F,Ftext=Noooooooooooo,feedback=that is for Java]{public static void}
  \end{mcb}
\end{problem}

Chapter 24

`hwexam.sty/cls`: An Infrastructure for formatting Assignments and Exams

The `hwexam` package and class allows individual course assignment sheets and compound assignment documents using problem files marked up with the `problem` package.

Contents

24.1 Introduction

The `hwexam` package and class supplies an infrastructure that allows to format nice-looking assignment sheets by simply including problems from problem files marked up with the `problem` package [Kohlhase:problem]. It is designed to be compatible with `problems.sty`, and inherits some of the functionality.

24.2 The User Interface

24.2.1 Package and Class Options

The `hwexam` package and class take the options `solutions`, `notes`, `hints`, `gnotes`, `pts`, `min`, and `boxed` that are just passed on to the `problems` package (cf. its documentation for a description of the intended behavior).

`showmeta` If the `showmeta` option is set, then the metadata keys are shown (see [Kohlhase:metakeys] for details and customization options).

The `hwexam` class additionally accepts the options `report`, `book`, `chapter`, `part`, and `showignores`, of the `omdoc` package [Kohlhase:smomdl] on which it is based and passes them on to that. For the `extrefs` option see [Kohlhase:sref].

24.2.2 Assignments

`assignment` This package supplies the `assignment` environment that groups problems into assignment sheets. It takes an optional KeyVal argument with the keys `number` (for the assignment number; if none is given, 1 is assumed as the default or — in multi-assignment documents
`number` — the ordinal of the `assignment` environment), `title` (for the assignment title; this is referenced in the title of the assignment sheet), `type` (for the assignment type; e.g. “quiz”, or “homework”), `given` (for the date the assignment was given), and `due` (for the date the assignment is due).

24.2.3 Typesetting Exams

`multiple` Furthermore, the `hwexam` package takes the option `multiple` that allows to combine multiple assignment sheets into a compound document (the assignment sheets are treated as section, there is a table of contents, etc.).

`test` Finally, there is the option `test` that modifies the behavior to facilitate formatting tests. Only in `test` mode, the macros `\testspace`, `\testnewpage`, and `\testemptypage` have an effect: they generate space for the students to solve the given problems. Thus they can be left in the L^AT_EX source.

`\testspace` `\testspace` takes an argument that expands to a dimension, and leaves vertical space accordingly. `\testnewpage` makes a new page in `test` mode, and `\testemptypage` generates an empty page with the cautionary message that this page was intentionally left empty.

`testheading` Finally, the `\testheading` takes an optional keyword argument where the keys
`duration` `duration` specifies a string that specifies the duration of the test, `min` specifies the equivalent in number of minutes, and `reqpts` the points that are required for a perfect grade.
`min`
`reqpts`

24.2.4 Including Assignments

`\inputassignment` The `\inputassignment` macro can be used to input an assignment from another file. It takes an optional `KeyVal` argument and a second argument which is a path to the file containing the problem (the macro assumes that there is only one `assignment` environment in the included file). The keys `number`, `title`, `type`, `given`, and `due` are just as for the `assignment` environment and (if given) overwrite the ones specified in the `assignment` environment in the included file.

24.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the `STEX`GitHub repository [[sTeX](#)].

1. none reported yet.

Part IV

Implementation

Chapter 25

ST_EX -Basics Implementation

25.1 The ST_EXDocument Class

The `stex` document class is pretty straight-forward: It largely extends the `standalone` package and loads the `stex` package, passing all provided options on to the package.

```
1 <*cls>
2
3 %%%%%%%%% basics.dtx %%%%%%%%%
4
5 \RequirePackage{expl3,l3keys2e}
6 \ProvidesExplClass{stex}{2021/08/01}{1.9}{bla}
7 \LoadClass[border=1px,varwidth]{standalone}
8 \setlength\textwidth{15cm}
9
10 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{stex}}
11 \ProcessOptions
12
13 \RequirePackage{stex}
14 </cls>
```

25.2 Preliminaries

```
15 <*package>
16
17 %%%%%%%%% basics.dtx %%%%%%%%%
18
19 \RequirePackage{expl3,l3keys2e,ltxcmds}
20 \ProvidesExplPackage{stex}{2021/08/01}{1.9}{bla}
21 \RequirePackage{expl-keystr-compatible}
22
23 %\RequirePackage{morewrites}
24 %\RequirePackage{amsmath}
25
```

Package options:

```

26 \keys_define:nn { stex } {
27   debug      .clist_set:N = \c_stex_debug_clist ,
28   showmods   .bool_set:N = \c_stex_showmods_bool ,
29   lang        .clist_set:N = \c_stex_languages_clist ,
30   mathhub     .tl_set_x:N = \mathhub ,
31   sms         .bool_set:N = \c_stex_persist_mode_bool ,
32   image       .bool_set:N = \c_tikzinput_image_bool ,
33   unknown     .code:n      = {}
34 }
35 \ProcessKeysOptions { stex }

```

\stex The sTeX logo:

\sTeX

```

36 \protected\def\stex{%
37   \@ifundefined{texorpdfstring}%
38   {\let\texorpdfstring\@firstoftwo}%
39   }%
40   \texorpdfstring{\raisebox{-.5ex}{S}\kern-.5ex\TeX}{sTeX}\xspace%
41 }
42 \def\sTeX{\stex}

```

(End definition for `\stex` and `\sTeX`. These functions are documented on page 19.)

25.3 Messages and logging

```

43 <@@=stex_log>

Warnings and error messages
44 \msg_new:nnn{stex}{error/unknownlanguage}{
45   Unknown~language:~#1
46 }
47 \msg_new:nnn{stex}{warning/nomathhub}{
48   MATHHUB~system~variable~not~found~and~no~
49   \detokenize{\mathhub}~value~set!
50 }
51 \msg_new:nnn{stex}{error/deactivated-macro}{
52   The~\detokenize{#1}~command~is~only~allowed~in~#2!
53 }

```

\stex_debug:nn A simple macro issuing package messages with subpath.

```

54 \cs_new_protected:Nn \stex_debug:nn {
55   \clist_if_in:NnTF \c_stex_debug_clist { all } {
56     \exp_args:Nnnx\msg_set:nnn{stex}{debug / #1}{
57       \\Debug~#1:~#2\\
58     }
59     \msg_none:nn{stex}{debug / #1}
60   }{
61     \clist_if_in:NnT \c_stex_debug_clist { #1 } {
62       \exp_args:Nnnx\msg_set:nnn{stex}{debug / #1}{
63         \\Debug~#1:~#2\\
64       }
65       \msg_none:nn{stex}{debug / #1}
66     }
67   }
68 }

```

(End definition for `\stex_debug:nn`. This function is documented on page 19.)

Redirecting messages:

```

69 \clist_if_in:NnTF \c_stex_debug_clist {all} {
70   \msg_redirect_module:nnn{ stex }{ none }{ term }
71 }{
72   \clist_map_inline:Nn \c_stex_debug_clist {
73     \msg_redirect_name:nnn{ stex }{ debug / ##1 }{ term }
74   }
75 }
76
77 \stex_debug:nn{log}{debug~mode~on}

```

25.4 Persistence

78 `<@=stex_persist>`

`\c__stex_persist_sms_iow` File variable used for the sms-File

```

79 \iow_new:N \c__stex_persist_sms_iow
80 \AddToHook{begindocument}{
81   \bool_if:NTF \c_stex_persist_mode_bool {
82     \ExplSyntaxOn \input{\jobname.sms} \ExplSyntaxOff
83   } {
84     % \iow_open:Nn \c__stex_persist_sms_iow {\jobname.sms}
85   }
86 }
87 \AddToHook{enddocument}{
88   \bool_if:NF \c_stex_persist_mode_bool {
89     % \iow_close:N \c__stex_persist_sms_iow
90   }
91 }

```

(End definition for `\c__stex_persist_sms_iow`.)

`\stex_add_to_sms:n` Adds the provided code to the .sms-file of the document.

```

92 \cs_new_protected:Nn \stex_add_to_sms:n {
93   \bool_if:NF \c_stex_persist_mode_bool {
94     % \iow_now:Nn \c__stex_persist_sms_iow { #1 }
95   }
96 }

```

(End definition for `\stex_add_to_sms:n`. This function is documented on page 19.)

25.5 HTML Annotations

97 `<@=stex_annotate>`
98 `\RequirePackage{rustex}`

We add the namespace abbreviation `ns:stex="http://kwarc.info/ns/sTeX"` to `RuSTEX`:

```

99 \rustex_add_Namespace:nn{stex}{http://kwarc.info/ns/sTeX}

```

`\if@latexml` Conditionals for L^AT_EX_ML:

```

\latexml_if_p:
\latexml_if:TF
100 \ifcsname if@latexml\endcsname\else

```

```

101 \expandafter\newif\csname if@latexml\endcsname\@latexmlfalse
102 \fi
103
104 \prg_new_conditional:Nnn \latexml_if: {p, T, F, TF} {
105   \if@latexml
106     \prg_return_true:
107   \else:
108     \prg_return_false:
109   \fi:
110 }

```

(End definition for \if@latexml and \latexml_if:TF. These functions are documented on page 19.)

`\l__stex_annotate_arg_tl` Used by annotation macros to ensure that the HTML output to annotate is not empty.
`\c__stex_annotate_emptyarg_tl`

```

111 \tl_new:N \l__stex_annotate_arg_tl
112 \tl_const:Nx \c__stex_annotate_emptyarg_tl {
113   \rustex_if:TF {
114     \rustex_direct_HTML:n { \c_ampersand_str lrm; }
115   }{-}
116 }

```

(End definition for \l__stex_annotate_arg_tl and \c__stex_annotate_emptyarg_tl.)

`_stex_annotate_checkempty:n`

```

117 \cs_new_protected:Nn \_stex_annotate_checkempty:n {
118   \tl_set:Nn \l__stex_annotate_arg_tl { #1 }
119   \tl_if_empty:NT \l__stex_annotate_arg_tl {
120     \tl_set_eq:NN \l__stex_annotate_arg_tl \c__stex_annotate_emptyarg_tl
121   }
122 }

```

(End definition for _stex_annotate_checkempty:n.)

`\l_stex_html_do_output_bool` Whether to (locally) produce HTML output

```

\stex_if_do_html:
123 \bool_new:N \l_stex_html_do_output_bool
124 \bool_set_true:N \l_stex_html_do_output_bool
125 \prg_new_conditional:Nnn \stex_if_do_html: {p,T,F,TF} {
126   \bool_if:nTF \l_stex_html_do_output_bool
127     \prg_return_true: \prg_return_false:
128 }

```

(End definition for \l_stex_html_do_output_bool and \stex_if_do_html:. These functions are documented on page ??.)

`\stex_suppress_html:n` Whether to (locally) produce HTML output

```

129 \cs_new_protected:Nn \stex_suppress_html:n {
130   \exp_args:Nne \use:nn {
131     \bool_set_false:N \l_stex_html_do_output_bool
132     #1
133   }{
134     \stex_if_do_html:T {
135       \bool_set_true:N \l_stex_html_do_output_bool
136     }
137   }
138 }

```

(End definition for `\stex_suppress_html:n`. This function is documented on page ??.)

`\stex_annotate:env`

`\stex_annotate_invisible:n`

`\stex_annotate_invisible:nnn`

We define four macros for introducing attributes in the HTML output. The definitions depend on the “backend” used (L^AT_EX_ML, R_US_TE_X, p_DF_LA_TE_X).

The p_DF_LA_TE_X-macros largely do nothing; the R_US_TE_X-implementations are pretty clear in what they do, the L^AT_EX_ML-implementations resort to perl bindings.

```

139 \rustex_if:TF{
140   \cs_new_protected:Nn \stex_annotate:nnn {
141     \__stex_annotate_checkempty:n { #3 }
142     \rustex_annotate_HTML:nn {
143       property="stex:#1" ~
144       resource="#2"
145     } {
146       \mode_if_vertical:TF{
147         \tl_use:N \l__stex_annotate_arg_tl\par
148       }{
149         \tl_use:N \l__stex_annotate_arg_tl
150       }
151     }
152   }
153   \cs_new_protected:Nn \stex_annotate_invisible:n {
154     \__stex_annotate_checkempty:n { #1 }
155     \rustex_annotate_HTML:nn {
156       stex:visible="false" ~
157       style:display="none"
158     } {
159       \mode_if_vertical:TF{
160         \tl_use:N \l__stex_annotate_arg_tl\par
161       }{
162         \tl_use:N \l__stex_annotate_arg_tl
163       }
164     }
165   }
166   \cs_new_protected:Nn \stex_annotate_invisible:nnn {
167     \__stex_annotate_checkempty:n { #3 }
168     \rustex_annotate_HTML:nn {
169       property="stex:#1" ~
170       resource="#2" ~
171       stex:visible="false" ~
172       style:display="none"
173     } {
174       \mode_if_vertical:TF{
175         \tl_use:N \l__stex_annotate_arg_tl\par
176       }{
177         \tl_use:N \l__stex_annotate_arg_tl
178       }
179     }
180   }
181   \NewDocumentEnvironment{stex_annotate_env} { m m } {
182     \par
183     \rustex_annotate_HTML_begin:n {
184       property="stex:#1" ~
185       resource="#2"
186     }

```

```

187   }{
188     \par\rustex_annotate_HTML_end:
189   }
190 }{
191   \latexml_if:TF {
192     \cs_new_protected:Nn \stex_annotate:nnn {
193       \__stex_annotate_checkempty:n { #3 }
194       \mode_if_math:TF {
195         \cs:w latexml@annotate@math\cs_end:{#1}{#2}{
196           \tl_use:N \l__stex_annotate_arg_tl
197         }
198       }{
199         \cs:w latexml@annotate@text\cs_end:{#1}{#2}{
200           \tl_use:N \l__stex_annotate_arg_tl
201         }
202       }
203     }
204     \cs_new_protected:Nn \stex_annotate_invisible:n {
205       \__stex_annotate_checkempty:n { #1 }
206       \mode_if_math:TF {
207         \cs:w latexml@invisible@math\cs_end:{
208           \tl_use:N \l__stex_annotate_arg_tl
209         }
210       } {
211         \cs:w latexml@invisible@text\cs_end:{
212           \tl_use:N \l__stex_annotate_arg_tl
213         }
214       }
215     }
216     \cs_new_protected:Nn \stex_annotate_invisible:nnn {
217       \__stex_annotate_checkempty:n { #3 }
218       \cs:w latexml@annotate@invisible\cs_end:{#1}{#2}{
219         \tl_use:N \l__stex_annotate_arg_tl
220       }
221     }
222     \NewDocumentEnvironment{stex_annotate_env} { m m } {
223       \par\begin{latexml@annotateenv}{#1}{#2}
224     }{
225       \par\end{latexml@annotateenv}
226     }
227   }{
228     \cs_new_protected:Nn \stex_annotate:nnn {#3}
229     \cs_new_protected:Nn \stex_annotate_invisible:n {}
230     \cs_new_protected:Nn \stex_annotate_invisible:nnn {}
231     \NewDocumentEnvironment{stex_annotate_env} { m m } {}{}
232   }
233 }

```

(End definition for `\stex_annotate:nnn`, `\stex_annotate_invisible:n`, and `\stex_annotate_invisible:nnn`. These functions are documented on page 20.)

25.6 Languages

```

234 <@=stex_language>

```

`\c_stex_languages_prop`
`\c_stex_language_abbrevs_prop`

We store language abbreviations in two (mutually inverse) property lists:

```

235 \prop_const_from_keyval:Nn \c_stex_languages_prop {
236   en = english ,
237   de = ngerman ,
238   ar = arabic ,
239   bg = bulgarian ,
240   ru = russian ,
241   fi = finnish ,
242   ro = romanian ,
243   tr = turkish ,
244   fr = french
245 }
246
247 \prop_const_from_keyval:Nn \c_stex_language_abbrevs_prop {
248   english   = en ,
249   ngerman   = de ,
250   arabic    = ar ,
251   bulgarian = bg ,
252   russian   = ru ,
253   finnish   = fi ,
254   romanian  = ro ,
255   turkish   = tr ,
256   french    = fr
257 }
258 % todo: chinese simplified (zhs)
259 %       chinese traditional (zht)

```

(End definition for `\c_stex_languages_prop` and `\c_stex_language_abbrevs_prop`. These variables are documented on page 20.)

we use the `lang`-package option to load the corresponding babel languages:

```

260 \clist_if_empty:NF \c_stex_languages_clist {
261   \clist_clear:N \l_tmpa_clist
262   \clist_map_inline:Nn \c_stex_languages_clist {
263     \prop_get:NnNTF \c_stex_languages_prop { #1 } \l_tmpa_str {
264       \clist_put_right:No \l_tmpa_clist \l_tmpa_str
265     } {
266       \msg_error:nnx{stex}{error/unknownlanguage}{\l_tmpa_str}
267     }
268   }
269   \stex_debug:nn{lang} {Languages:~\clist_use:Nn \l_tmpa_clist {,~} }
270   \RequirePackage[\clist_use:Nn \l_tmpa_clist,]{babel}
271 }

```

25.7 Activating/Deactivating Macros

`\stex_deactivate_macro:Nn`

```

272 \cs_new_protected:Nn \stex_deactivate_macro:Nn {
273   \exp_after:wN\let\csname \detokenize{#1} - orig\endcsname#1
274   \def#1{
275     \msg_error:nnxx{stex}{error/deactivated-macro}{#1}{#2}
276   }
277 }

```

(End definition for \stex_deactivate_macro:Nn. This function is documented on page 20.)

\stex_reactivate_macro:N

```
278 \cs_new_protected:Nn \stex_reactivate_macro:N {  
279   \exp_after:wN\let\exp_after:wN#1\csname \detokenize{#1} - orig\endcsname  
280 }
```

(End definition for \stex_reactivate_macro:N. This function is documented on page 20.)

```
281 \</package>
```

Chapter 26

STEX -MathHub Implementation

```
282 <*package>
283
284 %%%%%%%%%% mathhub.dtx %%%%%%%%%%
285
286 <@@=stex_path>
287
288 Warnings and error messages
289 \msg_new:nnn{stex}{error/norepository}{
290   No~archive~#1~found~in~#2
291 }
292 \msg_new:nnn{stex}{error/notinarchive}{
293   Not~currently~in~an~archive,~but~\detokenize{#1}~
294   needs~one!
295 }
296 \msg_new:nnn{stex}{error/nofile}{
297   \detokenize{#1}~could~not~find~file~#2
298 }
```

26.1 Generic Path Handling

We treat paths as L^AT_EX3-sequences (of the individual path segments, i.e. separated by a /-character) unix-style; i.e. a path is absolute if the sequence starts with an empty entry.

```
\stex_path_from_string:Nn
\stex_path_from_string:NV
\stex_path_from_string:cn
\stex_path_from_string:cV
297 \cs_new_protected:Nn \stex_path_from_string:Nn {
298   \str_set:Nx \l_tmpa_str { #2 }
299   \str_if_empty:NTF \l_tmpa_str {
300     \seq_clear:N #1
301   }{
302     \exp_args:NNNo \seq_set_split:Nnn #1 / { \l_tmpa_str }
303     \sys_if_platform_windows:T{
304       \seq_clear:N \l_tmpa_tl
305       \seq_map_inline:Nn #1 {
306         \seq_set_split:Nnn \l_tmpb_tl \c_backslash_str { ##1 }
307         \seq_concat:NNN \l_tmpa_tl \l_tmpa_tl \l_tmpb_tl
308       }
309     }
310   }
```

```

308     }
309     \seq_set_eq:NN #1 \l_tmpa_tl
310   }
311   \stex_path_canonicalize:N #1
312 }
313 }
314 \cs_generate_variant:Nn \stex_path_from_string:Nn
315 { NV, cn, cV }

```

(End definition for `\stex_path_from_string:Nn`. This function is documented on page 21.)

```

\stex_path_to_string:NN
\stex_path_to_string:N
316 \cs_new_protected:Nn \stex_path_to_string:NN {

384 \stex_path_from_string:Nn\c_stex_pwd_seq\l_stex_kpsewhich_return_str
385 \stex_path_to_string:NN\c_stex_pwd_seq\c_stex_pwd_str
386 \stex_debug:nn {mathhub} {PWD:~\str_use:N\c_stex_pwd_str}

```

(End definition for `\c_stex_pwd_seq` and `\c_stex_pwd_str`. These variables are documented on page 21.)

26.3 File Hooks and Tracking

387 `<@@=stex_files>`

We introduce hooks for file inputs that keep track of the absolute paths of files used. This will be useful to keep track of modules, their archives, namespaces etc.

Note that the absolute paths are only accurate in `\input`-statements for paths relative to the PWD, so they shouldn't be relied upon in any other setting than for \TeX -purposes.

`\g__stex_files_stack` keeps track of file changes

388 `\seq_gclear_new:N\g__stex_files_stack`

(End definition for `\g__stex_files_stack`.)

`\c_stex_mainfile_seq`

`\c_stex_mainfile_str`

389 `\str_set:Nx \c_stex_mainfile_str {\c_stex_pwd_str/\jobname.tex}`

390 `\stex_path_from_string:Nn \c_stex_mainfile_seq`

391 `\c_stex_mainfile_str`

(End definition for `\c_stex_mainfile_seq` and `\c_stex_mainfile_str`. These variables are documented on page 21.)

`\g_stex_currentfile_seq` Hooks for file inputs that push/pop `\g__stex_files_stack` to update `\c_stex_mainfile_seq`.

```

392 \seq_gclear_new:N\g_stex_currentfile_seq
393 \AddToHook{file/before}{
394   \stex_path_from_string:Nn\g_stex_currentfile_seq{\CurrentFilePath}
395   \stex_path_if_absolute:NTF\g_stex_currentfile_seq{

28.1 The module environment

module arguments:

```

1027 \keys_define:nn { stex / module } {
1028   title      .str_set_x:N = \l_stex_module_title_str ,
1029   ns         .str_set_x:N = \l_stex_module_ns_str ,
1030   lang       .str_set_x:N = \l_stex_module_lang_str ,
1031   sig        .str_set_x:N = \l_stex_module_sig_str ,
1032   creators   .str_set_x:N = \l_stex_module_creators_str ,
1033   contributors .str_set_x:N = \l_stex_module_contributors_str ,
1034   meta       .str_set_x:N = \l_stex_module_meta_str ,
1035   srccite    .str_set_x:N = \l_stex_module_srccite_str
1036 }
1037
1038 \cs_new_protected:Nn \__stex_modules_args:n {
1039   \str_clear:N \l_stex_module_title_str
1040   \str_clear:N \l_stex_module_ns_str
1041   \str_clear:N \l_stex_module_lang_str
1042   \str_clear:N \l_stex_module_sig_str
1043   \str_clear:N \l_stex_module_creators_str
1044   \str_clear:N \l_stex_module_contributors_str
1045   \str_clear:N \l_stex_module_meta_str
1046   \str_clear:N \l_stex_module_srccite_str
1047   \keys_set:nn { stex / module } { #1 }
1048 }

```

```

1049
1050 % module parameters here? In the body?
1051

```

`\stex_module_setup:nn` Sets up a new module property list:

```

1052 \cs_new_protected:Nn \stex_module_setup:nn {
1053   \str_set:Nx \l_stex_module_name_str { #2 }
1054   \__stex_modules_args:n { #1 }

```

First, we set up the name and namespace of the module.
Are we in a nested module?

```

1055   \stex_if_in_module:TF {
1056     % Nested module
1057     \prop_get:cnN {c_stex_module_\l_stex_current_module_str _prop}
1058       { ns } \l_stex_module_ns_str
1059     \str_set:Nx \l_stex_module_name_str {
1060       \prop_item:cn {c_stex_module_\l_stex_current_module_str _prop}
1061         { name } / \l_stex_module_name_str
1062     }
1063   }{
1064     % not nested:
1065     \str_if_empty:NT \l_stex_module_ns_str {
1066       \stex_modules_current_namespace:
1067       \str_set_eq:NN \l_stex_module_ns_str \l_stex_modules_ns_str
1068       \exp_args:NNNo \seq_set_split:Nnn \l_tmpa_seq
1069         / {\l_stex_module_ns_str}
1070       \seq_pop_right:NN \l_tmpa_seq \l_tmpa_str
1071       \str_if_eq:NNT \l_tmpa_str \l_stex_module_name_str {
1072         \str_set:Nx \l_stex_module_ns_str {
1073           \stex_path_to_string:N \l_tmpa_seq
1074         }
1075       }
1076     }
1077   }

```

Next, we determine the language of the module:

```

1078   \str_if_empty:NT \l_stex_module_lang_str {
1079     \seq_get_right:NN \g_stex_currentfile_seq \l_tmpa_str
1080     \seq_set_split:NnV \l_tmpa_seq . \l_tmpa_str
1081     \seq_pop_right:NN \l_tmpa_seq \l_tmpa_str % .tex
1082     \seq_pop_left:NN \l_tmpa_seq \l_tmpa_str % <filename>
1083     \seq_if_empty:NF \l_tmpa_seq { %remaining element should be language
1084       \stex_debug:nn{modules} {Language~\l_stex_module_lang_str~
1085         inferred~from~file~name}
1086       \seq_pop_left:NN \l_tmpa_seq \l_stex_module_lang_str
1087     }
1088   }
1089
1090   \str_if_empty:NF \l_stex_module_lang_str {
1091     \prop_get:NVNTF {c_stex_languages_prop \l_stex_module_lang_str
1092       \l_tmpa_str {
1093       \ltx@ifpackageloaded{babel}{
1094         \exp_args:Nx \selectlanguage { \l_tmpa_str }
1095       }{}

```

```

1096     } {
1097         \msg_error:nnx{stex}{error/unknownlanguage}{\l_tmpa_str}
1098     }
1099 }

```

We check if we need to extend a signature module, and set `\l_stex_current_module_prop` accordingly:

```

1100 \str_if_empty:NTF \l_stex_module_sig_str {
1101     \exp_args:Nnx \prop_gset_from_keyval:cn {
1102         c_stex_module_\l_stex_module_ns_str?\l_stex_module_name_str _prop
1103     } {
1104         name      = \l_stex_module_name_str ,
1105         ns        = \l_stex_module_ns_str ,
1106         file      = \exp_not:o { \g_stex_currentfile_seq } ,
1107         lang      = \l_stex_module_lang_str ,
1108         sig       = \l_stex_module_sig_str ,
1109         meta      = \l_stex_module_meta_str
1110     }
1111     \seq_clear:c {c_stex_module_\l_stex_module_ns_str?\l_stex_module_name_str _imports}
1112     \seq_clear:c {c_stex_module_\l_stex_module_ns_str?\l_stex_module_name_str _fields}
1113     \seq_clear:c {c_stex_module_\l_stex_module_ns_str?\l_stex_module_name_str _constants}
1114     \tl_clear:c {c_stex_module_\l_stex_module_ns_str?\l_stex_module_name_str _code}
1115     \str_set:Nx\l_stex_current_module_str{\l_stex_module_ns_str?\l_stex_module_name_str}

```

We load the metatheory:

```

Chapter 34

The Implementation

34.1 Package Options

We declare some switches which will modify the behavior according to the package options. Generally, an option `xxx` will just set the appropriate switches to true (otherwise they stay false).¹³

```
3754 \package
3755 \stex_sproof
3756
3757 %%%% sproof.dtx %%%%
3758
```

34.2 Proofs

We first define some keys for the proof environment.

```
3759 \keys_define:nn { stex / spf } {
3760   id          .str_set:N = \l__stex_sproof_spf_id_str,
3761   display     .tl_set:N  = \l__stex_sproof_spf_display_tl,
3762   for         .tl_set:N  = \l__stex_sproof_spf_for_tl ,
3763   from        .tl_set:N  = \l__stex_sproof_spf_from_tl ,
3764   proofend    .tl_set:N  = \l__stex_sproof_spf_proofend_tl,
3765   type        .tl_set:N  = \l__stex_sproof_spf_type_tl,
3766   title       .tl_set:N  = \l__stex_sproof_spf_title_tl,
3767   continues   .tl_set:N  = \l__stex_sproof_spf_continues_tl,
3768   functions   .tl_set:N  = \l__stex_sproof_spf_functions_tl,
3769   method      .tl_set:N  = \l__stex_sproof_spf_method_tl
3770 }
3771 \cs_new_protected:Nn \l__stex_sproof_spf_args:n {
3772   \str_clear:N \l__stex_sproof_spf_id_str
3773   \tl_clear:N \l__stex_sproof_spf_display_tl
3774   \tl_clear:N \l__stex_sproof_spf_for_tl
3775   \tl_clear:N \l__stex_sproof_spf_from_tl
3776   \tl_set:Nn \l__stex_sproof_spf_proofend_tl {\sproof@box}
3777   \tl_clear:N \l__stex_sproof_spf_type_tl
3778   \tl_clear:N \l__stex_sproof_spf_title_tl

```

¹³EDNOTE: need an implementation for L^AT_EX_ML

```

3779 \tl_clear:N \l__stex_sproof_spf_continues_tl
3780 \tl_clear:N \l__stex_sproof_spf_functions_tl
3781 \tl_clear:N \l__stex_sproof_spf_method_tl
3782 \keys_set:nn { stex / spf }{ #1 }
3783 }

```

\spf@flow We define this macro, so that we can test whether the **display** key has the value **flow**

```

3784 \def\spf@flow{flow}

```

(End definition for **\spf@flow**. This function is documented on page ??.)

For proofs, we will have to have deeply nested structures of enumerated list-like environments. However, L^AT_EX only allows **enumerate** environments up to nesting depth 4 and general list environments up to listing depth 6. This is not enough for us. Therefore we have decided to go along the route proposed by Leslie Lamport to use a single top-level list with dotted sequences of numbers to identify the position in the proof tree. Unfortunately, we could not use his **pf.sty** package directly, since it does not do automatic numbering, and we have to add keyword arguments all over the place, to accomodate semantic information.

pst@with@label This environment manages⁶ the path labeling of the proof steps in the description environment of the outermost **proof** environment. The argument is the label prefix up to now; which we cache in **\pst@label** (we need evaluate it first, since are in the right place now!). Then we increment the proof depth which is stored in **\count10** (lower counters are used by T_EX for page numbering) and initialize the next level counter **\count\count10** with 1. In the end call for this environment, we just decrease the proof depth counter by 1 again.

```

3785 \newcount\count_ten
3786 \newenvironment{pst@with@label}[1]{
3787   \edef\pst@label{#1}
3788   \advance\count_ten by 1\relax
3789   \count_ten=1
3790 }{
3791   \advance\count_ten by -1\relax
3792 }

```

\the@pst@label **\the@pst@label** evaluates to the current step label.

```

3793 \def\the@pst@label{
3794   \pst@make@label\pst@label{\number\count_ten}\l__stex_sproof_pstlabel_postfix_tl
3795 }

```

(End definition for **\the@pst@label**. This function is documented on page ??.)

\setpstlabelstyle **\setpstlabelstyle{metaKey-Val pairs}** makes the labeling style customizable. **\setpstlabelstyle{pr}** will change the labeling style from **P.1.2.3** to **Pr-1-2-3†**. **\setpstlabelstyledefault** will set the labeling style back to default.

```

3796 \keys_define:nn { stex / pstlabel }{
3797   prefix      .tl_set:N   = \l__stex_sproof_pstlabel_prefix_tl,
3798   delimiter   .tl_set:N   = \l__stex_sproof_pstlabel_delimiter_tl,
3799   postfix     .tl_set:N   = \l__stex_sproof_pstlabel_postfix_tl
3800 }
3801 \cs_new_protected:Nn \__stex_sproof_pstlabel_args:n {

```

⁶This gets the labeling right but only works 8 levels deep

```

The next two environments (proof steps) and comments, are mostly semantical, they take `KeyVal` arguments that specify their semantic role. In draft mode, they read these values and show them. If the surrounding proof had `display=flow`, then no new `\item` is generated, otherwise it is. In any case, the proof step number (at the current level) is incremented.

spfstep 16

```

3920 \newenvironment{spfstep}[1][]{
3921   \_stex_sproof_spf_args:n{#1}
3922   \@in@omtexttrue

3938   }
3939 }{
3940   \next@pst@label
3941 }

```

The next two environments also take a `KeyVal` argument, but also a regular one, which contains a start text. Both environments start a new numbered proof level.

subproof In the `subproof` environment, a new (lower-level) `proproofof` environment is started.

```

3942 \newenvironment{subproof}[2][]{
3943   \_stex_sproof_spf_args:n{#1}
3944   \def\@test{#2}
3945   \ifx\@test\empty\else
3946     \tl_if_eq:NNF \l__stex_sproof_spf_display_tl\spf@flow{
3947       \item[\the@pst@label]
3948     }{#2}
3949   \fi
3950   \begin{pst@with@label}{\pst@label,\number\count_ten}
3951 }{
3952   \end{pst@with@label}\next@pst@label
3953 }

```

spfcases In the `pfcases` environment, the start text is displayed as the first comment of the proof.

```

3954 \newenvironment{spfcases}[2][]{
3955   \def\@test{#1}
3956   \ifx\@test\empty
3957     \begin{subproof}[method=by-cases]{#2}
3958   \else
3959     \begin{subproof}[#1,method=by-cases]{#2}
3960   \fi
3961 }{

```

¹⁶EdNOTE: MK: labeling of steps does not work yet.

```

3962 \end{subproof}
3963 }

```

spfcase In the **pfcase** environment, the start text is displayed specification of the case after the **\item**

```

3964 \newenvironment{spfcase}[2] [] {
3965   \__stex_sproof_spf_args:n{#1}
3966   \tl_if_eq:NNF \l__stex_sproof_spf_display_tl\spf@flow{

3968   }
3969   \def\@test{#2}
3970   \ifx\@test\@empty
3971   \else
3972     {\titleemph{#2}:~}
3973   \fi
3974   \begin{pst@with@label}{\pst@label,\number\count_ten}
3975 }{
3976   \tl_if_eq:NNF \l__stex_sproof_spf_display_tl\spf@flow{
3977     \sproofend
3978   }
3979   \end{pst@with@label}
3980   \next@pst@label
3981 }

```

spfcase similar to **spfcase**, takes a third argument.

```

3982 \newcommand\spfcasesketch[3] [] {
3983   \__stex_sproof_spf_args:n{#1}
3984   \tl_if_eq:NNF \l__stex_sproof_spf_display_tl\spf@flow{
3985     \item[\the@pst@label]
3986   }
3987   \def\@test{#2}
3988   \ifx\@test\@empty
3989   \else
3990     {\titleemph{#2}:~}
3991   \fi#3
3992   \next@pst@label
3993 }%

```

34.3 Justifications

We define the actions that are undertaken, when the keys for justifications are encountered. Here this is very simple, we just define an internal macro with the value, so that we can use it later.

```

3994 \keys_define:nn { stex / just }{
3995   id          .str_set:x:N = \l__stex_sproof_just_id_str,
3996   method      .tl_set:N    = \l__stex_sproof_just_method_tl,
3997   premises    .tl_set:N    = \l__stex_sproof_just_premises_tl,
3998   args        .tl_set:N    = \l__stex_sproof_just_args_tl
3999 }

```

The next three environments and macros are purely semantic, so we ignore the keyval arguments for now and only display the content.¹⁷

¹⁷EDNOTE: need to do something about the premise in draft mode.

justification

```
4000 \newenvironment{justification}[1] [] {}{}
```

\premise

```
4001 \newcommand\premise[2] [] {#2}
```

(End definition for \premise. This function is documented on page ??.)

\justarg the **\justarg** macro is purely semantic, so we ignore the keyval arguments for now and only display the content.

```
4002 \newcommand\justarg[2] [] {#2}
```

```
4003 \end{package}
```

(End definition for \justarg. This function is documented on page ??.)

Some auxiliary code, and clean up to be executed at the end of the package.

Chapter 38

document-structure.sty Implementation

38.1 The OMDoc Class

The functionality is spread over the `omdoc` class and package. The class provides the `document` environment and the `omdoc` element corresponds to it, whereas the package provides the concrete functionality.

```
4186 \*cls)
4187 \@@=document_structure)
4188 \ProvidesExplClass{omdoc}{2020/10/19}{1.4}{OMDoc Documents}
4189 \RequirePackage{l3keys2e,expl-keystr-compatible}
```

38.2 Class Options

To initialize the `omdoc` class, we declare and process the necessary options using the `kvoptions` package for key/value options handling. For `omdoc.cls` this is quite simple. We have options `report` and `book`, which set the `\omdoc@cls@class` macro and pass on the macro to `omdoc.sty` for further processing.

`\omdoc@cls@class`

```
4190 \keys_define:nn{ document-structure / pkg }{
4191   class      .str_set_x:N = \c_document_structure_class_str,
4192   minimal    .bool_set:N = \c_document_structure_minimal_bool,
4193   report     .code:n      = {
4194     \ClassWarning{omdoc}{the option 'report' is deprecated, use 'class=report', instead}
4195     \str_set:Nn \c_document_structure_class_str {report}
4196   },
4197   book       .code:n      = {
4198     \ClassWarning{omdoc}{the option 'book' is deprecated, use 'class=book', instead}
4199     \str_set:Nn \c_document_structure_class_str {book}
4200   },
4201   bookpart   .code:n      = {
4202     \ClassWarning{omdoc}{the option 'bookpart' is deprecated, use 'class=book,topsect=chapter}
4203     \str_set:Nn \c_document_structure_class_str {book}
4204     \str_set:Nn \c_document_structure_topsect_str {chapter}
4205   },
```

```

4206 docopt      .str_set_x:N = \c_document_structure_docopt_str,
4207 unknown     .code:n      = {
4208   \PassOptionsToPackage{ \CurrentOption }{ omdoc }
4209 }
4210 }
4211 \ProcessKeysOptions{ document-structure / pkg }
4212 \str_if_empty:NT \c_document_structure_class_str {
4213   \str_set:Nn \c_document_structure_class_str {article}
4214 }
4215 \exp_after:wN\LoadClass\exp_after:wN[\c_document_structure_docopt_str]
4216   {\c_document_structure_class_str}
4217

```

38.3 Beefing up the document environment

Now, – unless the option `minimal` is defined – we include the `stex` package

```

4218 \RequirePackage{omdoc}
4219 \bool_if:NF \c_document_structure_minimal_bool {
4220   \RequirePackage{stex-compatibility}

```

And define the environments we need. The top-level one is the `document` environment, which we redefined so that we can provide keyval arguments.

document For the moment we do not use them on the L^AT_EX level, but the document identifier is picked up by L^AT_EXML.¹⁸

```

4221 \keys_define:nn { document-structure / document }{
4222   id .str_set_x:N = \c_document_structure_document_id_str
4223 }
4224 \let\__document_structure_orig_document=\document
4225 \renewcommand{\document}[1][]{
4226   \keys_set:nn{ document-structure / document }{ #1 }
4227   \stex_ref_new_doc_target:n { \c_document_structure_document_id_str }
4228   \__document_structure_orig_document
4229 }

```

Finally, we end the test for the `minimal` option.

```

4230 }
4231 \</cls>

```

38.4 Implementation: OMDoc Package

```

4232 \*package>
4233 \ProvidesExplPackage{omdoc}{2020/10/19}{1.4}{OMDoc document Structure}
4234 \RequirePackage{expl-keys-compact,13keys2e}

```

38.5 Package Options

We declare some switches which will modify the behavior according to the package options. Generally, an option `xxx` will just set the appropriate switches to true (otherwise they stay false).

¹⁸EdNOTE: faking documentkeys for now. @HANG, please implement

```

4235
4236 \keys_define:nn{ document-structure / pkg }{
4237   class      .str_set_x:N = \c_document_structure_class_str,
4238   topsect    .str_set_x:N = \c_document_structure_topsect_str,
4239   % showignores .bool_set:N = \c_document_structure_showignores_bool,
4240 }
4241 \ProcessKeysOptions{ document-structure / pkg }
4242 \str_if_empty:NT \c_document_structure_class_str {
4243   \str_set:Nn \c_document_structure_class_str {article}
4244 }
4245 \str_if_empty:NT \c_document_structure_topsect_str {
4246   \str_set:Nn \c_document_structure_topsect_str {section}
4247 }

```

Then we need to set up the packages by requiring the `sref` package to be loaded.

```

4248 \RequirePackage{xspace}
4249 \RequirePackage{comment}
4250 \@ifpackageloaded{babel}{\RequirePackage[base]{babel}}

```

We set up triggers for the other languages, currently only German.

```

4251 \@ifpackageloaded{babel}{
4252   \clist_set:Nx \l_tmpa_clist {\bbl@loaded}
4253   \clist_if_in:NnT \l_tmpa_clist {ngerman}{
4254     \input{omdoc-ngerman.ldf}
4255   }
4256 }{}
4257 %\AfterBabelLanguage{ngerman}{\input{omdoc-ngerman.ldf}}

```

`\section@level`

Finally, we set the `\section@level` macro that governs sectioning. The default is two (corresponding to the `article` class), then we set the defaults for the standard classes `book` and `report` and then we take care of the levels passed in via the `topsect` option.

```

4258 \int_new:N \l_document_structure_section_level_int
4259 \str_case:VnF \c_document_structure_topsect_str {
4260   {part}{
4261     \int_set:Nn \l_document_structure_section_level_int {0}
4262   }
4263   {chapter}{
4264     \int_set:Nn \l_document_structure_section_level_int {1}
4265   }
4266 }{
4267   \str_case:VnF \c_document_structure_class_str {
4268     {book}{
4269       \int_set:Nn \l_document_structure_section_level_int {0}
4270     }
4271     {report}{
4272       \int_set:Nn \l_document_structure_section_level_int {0}
4273     }
4274   }{
4275     \int_set:Nn \l_document_structure_section_level_int {2}
4276   }
4277 }

```

38.6 Document Structure

The structure of the document is given by the `omgroup` environment just like in OMDoc. The hierarchy is adjusted automatically according to the \LaTeX class in effect.

`\currentsectionlevel` For the `\currentsectionlevel` and `\Currentsectionlevel` macros we use an internal macro `\current@section@level` that only contains the keyword (no markup). We initialize it with “document” as a default. In the generated OMDoc, we only generate a text element of class `omdoc_currentsectionlevel`, which will be instantiated by CSS later.¹⁹

EdN:19

```
4278 \def\current@section@level{document}%
4279 \newcommand\currentsectionlevel{\lowercase\expandafter{\current@section@level}\xspace}%
4280 \newcommand\Currentsectionlevel{\expandafter\MakeUppercase\current@section@level\xspace}%
```

(End definition for \currentsectionlevel. This function is documented on page ??.)

`\skipomgroup`

```
4281 \cs_new_protected:Npn \skipomgroup {
4282   \ifcase\l_document_structure_section_level_int
4283   \or\stepcounter{part}
4284   \or\stepcounter{chapter}
4285   \or\stepcounter{section}
4286   \or\stepcounter{subsection}
4287   \or\stepcounter{subsubsection}
4288   \or\stepcounter{paragraph}
4289   \or\stepcounter{subparagraph}
4290   \fi
4291 }
```

(End definition for \skipomgroup. This function is documented on page ??.)

`blindomgroup`

```
4292 \newcommand\at@begin@blindomgroup[1]{%
4293 \newenvironment{blindomgroup}
4294 {
4295   \int_incr:N\l_document_structure_section_level_int
4296   \at@begin@blindomgroup\l_document_structure_section_level_int
4297 }{}}
```

`\omgroup@nonum` convenience macro: `\omgroup@nonum{<level>}{<title>}` makes an unnumbered sectioning with title `<title>` at level `<level>`.

```
4298 \newcommand\omgroup@nonum[2]{
4299   \ifx\hyper@anchor\@undefined\else\phantomsection\fi
4300   \addcontentsline{toc}{#1}{#2}\@nameuse{#1}*{#2}
4301 }
```

(End definition for \omgroup@nonum. This function is documented on page ??.)

`\omgroup@num` convenience macro: `\omgroup@num{<level>}{<title>}` makes numbered sectioning with title `<title>` at level `<level>`. We have to check the `short` key was given in the `omgroup` environment and – if it is use it. But how to do that depends on whether the `rdfmata` package has been loaded. In the end we call `\sref@label@id` to enable crossreferencing.

```
4302 \newcommand\omgroup@num[2]{
```

¹⁹EDNOTE: MK: we may have to experiment with the more powerful uppercasing macro from `mfirstuc.sty` once we internationalize.

```

4303 \tl_if_empty:NTF \l__document_structure_omgroup_short_tl {
4304   \@nameuse{#1}{#2}
4305 }{
4306   \cs_if_exist:NTF\rdfmata@sectioning{
4307     \@nameuse{rdfmata@#1@old}[\l__document_structure_omgroup_short_tl]{#2}
4308   }{
4309     \@nameuse{#1}[\l__document_structure_omgroup_short_tl]{#2}
4310   }
4311 }
4312 %\sref@label@id@arg{\omdoc@ssect@name~\@nameuse{the#1}}\omgroup@id
4313 }

```

(End definition for \omgroup@num. This function is documented on page ??.)

omgroup

```

4314 \keys_define:nn { document-structure / omgroup }{
4315   id          .str_set_x:N = \l__document_structure_omgroup_id_str,
4316   date        .str_set_x:N = \l__document_structure_omgroup_date_str,

4338 }

```

we define a switch for numbering lines and a hook for the beginning of groups: The \at@begin@omgroup macro allows customization. It is run at the beginning of the omgroup, i.e. after the section heading.

```

4339 \newif\if@mainmatter\@mainmattertrue
4340 \newcommand\at@begin@omgroup[3] []{}

```

Then we define a helper macro that takes care of the sectioning magic. It comes with its own key/value interface for customization.

```

4341 \keys_define:nn { document-structure / sectioning }{
4342   name .str_set_x:N = \l__document_structure_sect_name_str ,
4343   ref .str_set_x:N = \l__document_structure_sect_ref_str ,
4344   clear .bool_set:N = \l__document_structure_sect_clear_bool ,
4345   num .bool_set:N = \l__document_structure_sect_num_bool ,
4346 }

```

```

4347 \cs_new_protected:Nn \__document_structure_sect_args:n {
4348   \str_clear:N \l__document_structure_sect_name_str
4349   \str_clear:N \l__document_structure_sect_ref_str
4350   \bool_set_false:N \l__document_structure_sect_clear_bool
4351   \bool_set_false:N \l__document_structure_sect_num_bool
4352   \keys_set:nn { document-structure / sectioning } { #1 }
4353 }
4354 \newcommand\omdoc@sectioning[3][]{
4355   \__document_structure_sect_args:n {#1}
4356   \let\omdoc@sect@name\l__document_structure_sect_name_str
4357   \bool_if:NT \l__document_structure_sect_clear_bool { \cleardoublepage }
4358   \if@mainmatter% numbering not overridden by frontmatter, etc.
4359     \bool_if:NTF \l__document_structure_sect_num_bool {
4360       \omgroup@num{#2}{#3}
4361     }{
4362       \omgroup@nonum{#2}{#3}
4363     }
4364     \def\current@section@level{\omdoc@sect@name}
4365   \else
4366     \omgroup@nonum{#2}{#3}
4367   \fi
4368 }% if@mainmatter

```

and another one, if redefines the `\addtocontentsline` macro of L^AT_EX to import the respective macros. It takes as an argument a list of module names.

```

4369 \newcommand\omgroup@redefine@addtocontents[1]{%
4370   %\edef\__document_structureimport{#1}%
4371   %\@for\@I:=\__document_structureimport\do{%
4372     %\edef\@path{\csname module@\@I @path\endcsname}%
4373     %\@ifundefined{tf@toc}\relax%
4374     % {\protected@write\tf@toc}{\string\@requiremodules{\@path}}}%
4375   %\ifx\hyper@anchor\@undefined% hyperref.sty loaded?
4376   %\def\addcontentsline##1##2##3{%
4377     %\addtocontents{##1}{\protect\contentsline{##2}{\string\withusedmodules{#1}{##3}}{\thepage}}%
4378   %\else% hyperref.sty not loaded
4379   %\def\addcontentsline##1##2##3{%
4380     %\addtocontents{##1}{\protect\contentsline{##2}{\string\withusedmodules{#1}{##3}}{\thepage}}%
4381   %\fi
4382 }% hyperref.sty loaded?

```

now the `omgroup` environment itself. This takes care of the table of contents via the helper macro above and then selects the appropriate sectioning command from `article.cls`. It also registers the current level of `omgroups` in the `\omgroup@level` counter.

```

4383 \int_new:N \l_document_structure_omgroup_level_int
4384 \newenvironment{omgroup}[2][]{% keys, title
4385 {
4386   \__document_structure_omgroup_args:n { #1 }%\sref@target%

```

If the `loadmodules` key is set on `\begin{omgroup}`, we redefine the `\addcontetsline` macro that determines how the sectioning commands below construct the entries for the table of contents.

```

4387 \bool_if:NT \l__document_structure_omgroup_loadmodules_bool {
4388   \omgroup@redefine@addtocontents{
4389     %\@ifundefined{module@id}\used@modules%
4390     %{\@ifundefined{module@\module@id @path}{\used@modules}\module@id}

```

```

4391     }
4392 }

```

now we only need to construct the right sectioning depending on the value of `\section@level`.

```

4393 \int_incr:N \l_document_structure_omgroup_level_int
4394 \int_incr:N \l_document_structure_section_level_int
4395 \ifcase\l_document_structure_section_level_int
4396   \or\omdoc@sectioning[name=\omdoc@part@kw,clear,num]{part}{#2}
4397   \or\omdoc@sectioning[name=\omdoc@chapter@kw,clear,num]{chapter}{#2}
4398   \or\omdoc@sectioning[name=\omdoc@section@kw,num]{section}{#2}
4399   \or\omdoc@sectioning[name=\omdoc@subsection@kw,num]{subsection}{#2}
4400   \or\omdoc@sectioning[name=\omdoc@subsubsection@kw,num]{subsubsection}{#2}
4401   \or\omdoc@sectioning[name=\omdoc@paragraph@kw,ref=this \omdoc@paragraph@kw]{paragraph}{#2}
4402   \or\omdoc@sectioning[name=\omdoc@subparagraph@kw,ref=this \omdoc@subparagraph@kw]{subparagraph}{#2}
4403 \fi
4404 \at@begin@omgroup[#1]\l_document_structure_section_level_int{#2}
4405 \stex_ref_new_doc_target:n\l__document_structure_omgroup_id_str
4406 }% for customization
4407 {}

```

and finally, we localize the sections

```

4408 \newcommand\omdoc@part@kw{Part}
4409 \newcommand\omdoc@chapter@kw{Chapter}
4410 \newcommand\omdoc@section@kw{Section}
4411 \newcommand\omdoc@subsection@kw{Subsection}
4412 \newcommand\omdoc@subsubsection@kw{Subsubsection}
4413 \newcommand\omdoc@paragraph@kw{paragraph}
4414 \newcommand\omdoc@subparagraph@kw{subparagraph}

```

38.7 Front and Backmatter

Index markup is provided by the `omtext` package [Koh20c], so in the `omdoc` package we only need to supply the corresponding `\printindex` command, if it is not already defined

`\printindex`

```

4415 \providecommand\printindex{\IfFileExists{\jobname.ind}{\input{\jobname.ind}}{}}

```

(End definition for `\printindex`. This function is documented on page ??.)

some classes (e.g. `book.cls`) already have `\frontmatter`, `\mainmatter`, and `\backmatter` macros. As we want to define `frontmatter` and `backmatter` environments, we save their behavior (possibly defining it) in `orig@*matter` macros and make them undefined (so that we can define the environments).

```

4416 \cs_if_exist:NTF\frontmatter{
4417   \let\__document_structure_orig_frontmatter\frontmatter
4418   \let\frontmatter\relax
4419 }{
4420   \tl_set:Nn\__document_structure_orig_frontmatter{
4421     \clearpage
4422     \@mainmatterfalse
4423     \pagenumbering{roman}
4424   }
4425 }
4426 \cs_if_exist:NTF\backmatter{

```

```

4427 \let\__document_structure_orig_backmatter\backmatter
4428 \let\backmatter\relax
4429 }{
4430 \tl_set:Nn\__document_structure_orig_backmatter{
4431 \clearpage
4432 \@mainmatterfalse
4433 \pagenumbering{roman}
4434 }
4435 }

```

Using these, we can now define the `frontmatter` and `backmatter` environments

frontmatter we use the `\orig@frontmatter` macro defined above and `\mainmatter` if it exists, otherwise we define it.

```

4436 \newenvironment{frontmatter}{
4437 \__document_structure_orig_frontmatter
4438 }{
4439 \cs_if_exist:NTF\mainmatter{
4440 \mainmatter
4441 }{
4442 \clearpage
4443 \@mainmattertrue
4444 \pagenumbering{arabic}
4445 }
4446 }

```

backmatter As `backmatter` is at the end of the document, we do nothing for `\endbackmatter`.

```

4447 \newenvironment{backmatter}{
4448 \__document_structure_orig_backmatter
4449 }{
4450 \cs_if_exist:NTF\mainmatter{
4451 \mainmatter
4452 }{
4453 \clearpage
4454 \@mainmattertrue
4455 \pagenumbering{arabic}
4456 }
4457 }

```

finally, we make sure that page numbering is arabic and we have main matter as the default

```

4458 \@mainmattertrue\pagenumbering{arabic}

```

\prematurestop We initialize `\afterprematurestop`, and provide `\prematurestop@endomgroup` which looks up `\omgroup@level` and recursively ends enough `{omgroup}`s.

```

4459 \def \c__document_structure_document_str{document}
4460 \newcommand\afterprematurestop{}
4461 \def\prematurestop@endomgroup{
4462 \unless\ifx\@currentvir\c__document_structure_document_str
4463 \expandafter\expandafter\expandafter\end\expandafter\expandafter\expandafter{\expandafter
4464 \expandafter\prematurestop@endomgroup
4465 \fi
4466 }
4467 \providecommand\prematurestop{

```

```

4468 \message{Stopping~sTeX~processing~prematurely}
4469 \prematurestop@endomgroup
4470 \afterprematurestop
4471 \end{document}
4472 }

```

(End definition for \prematurestop. This function is documented on page ??.)

38.8 Global Variables

\setSGvar set a global variable

```

4473 \RequirePackage{etoolbox}
4474 \newcommand\setSGvar[1]{\@namedef{sTeX@Gvar@#1}}

```

(End definition for \setSGvar. This function is documented on page ??.)

\useSGvar use a global variable

```

4475 \newrobustcmd\useSGvar[1]{%
4476 \@ifundefined{sTeX@Gvar@#1}
4477 {\PackageError{omdoc}
4478 {The sTeX Global variable #1 is undefined}
4479 {set it with \protect\setSGvar}}
4480 \@nameuse{sTeX@Gvar@#1}}

```

(End definition for \useSGvar. This function is documented on page ??.)

\ifSGvar execute something conditionally based on the state of the global variable.

```

4481 \newrobustcmd\ifSGvar[3]{\def\@test{#2}%
4482 \@ifundefined{sTeX@Gvar@#1}
4483 {\PackageError{omdoc}
4484 {The sTeX Global variable #1 is undefined}
4485 {set it with \protect\setSGvar}}
4486 {\expandafter\ifx\csname sTeX@Gvar@#1\endcsname\@test #3\fi}}

```

(End definition for \ifSGvar. This function is documented on page ??.)

Chapter 39

MiKoSlides – Implementation

39.1 Class and Package Options

We define some Package Options and switches for the `mikoslides` class and activate them by passing them on to `beamer.cls` and `omdoc.cls` and the `mikoslides` package. We pass the `nontheorem` option to the `statements` package when we are not in notes mode, since the `beamer` package has its own (overlay-aware) theorem environments.

```
4487 \*cls)
4488 \@@=mikoslides}
4489 \ProvidesExplClass{mikoslides}{2020/12/06}{1.3}{MiKo slides Class}
4490 \RequirePackage{l3keys2e,expl-keystr-compat}
4491
4492 \keys_define:nn{mikoslides / cls}{
4493   class .code:n = {
4494     \PassOptionsToClass{\CurrentOption}{omdoc}
4495     \str_if_eq:nnT{#1}{book}{
4496       \PassOptionsToPackage{defaulttopsec=part}{mikoslides}
4497     }
4498     \str_if_eq:nnT{#1}{report}{
4499       \PassOptionsToPackage{defaulttopsec=part}{mikoslides}
4500     }
4501   },
4502   notes .bool_set:N = \c__mikoslides_notes_bool ,
4503   slides .code:n = { \bool_set_false:N \c__mikoslides_notes_bool },
4504   unknown .code:n = {
4505     \PassOptionsToClass{\CurrentOption}{omdoc}
4506     \PassOptionsToClass{\CurrentOption}{beamer}
4507     \PassOptionsToPackage{\CurrentOption}{mikoslides}
4508   }
4509 }
4510 \ProcessKeysOptions{ mikoslides / cls }
4511 \bool_if:NTF \c__mikoslides_notes_bool {
4512   \PassOptionsToPackage{notes=true}{mikoslides}
4513 }{
4514   \PassOptionsToPackage{notes=false}{mikoslides}
4515 }
4516 \</cls)
```

now we do the same for the mikoslides package.

```

4517 <*package>
4518 \ProvidesExplPackage{mikoslides}{2020/12/06}{1.3}{MiKo slides Package}
4519 \RequirePackage{l3keys2e,expl-keystr-compat}
4520
4521 \keys_define:nn{mikoslides / pkg}{
4522   topsect      .str_set_x:N = \c__mikoslides_topsect_str,
4523   defaulttopsect .str_set_x:N = \c__mikoslides_defaulttopsec_str,
4524   notes        .bool_set:N = \c__mikoslides_notes_bool ,
4525   slides        .code:n      = { \bool_set_false:N \c__mikoslides_notes_bool },
4526   sectocframes .bool_set:N = \c__mikoslides_sectocframes_bool ,
4527   frameimages  .bool_set:N = \c__mikoslides_frameimages_bool ,
4528   fiboxed      .bool_set:N = \c__mikoslides_fiboxed_bool ,
4529   nopproblems  .bool_set:N = \c__mikoslides_nopproblems_bool,
4530   unknown      .code:n      = {
4531     \PassOptionsToClass{\CurrentOption}{stex}
4532     \PassOptionsToClass{\CurrentOption}{tikzinput}
4533   }
4534 }
4535 \ProcessKeysOptions{ mikoslides / pkg }
4536 \newif\ifnotes
4537 \bool_if:NTF \c__mikoslides_notes_bool {
4538   \notesttrue
4539 }{
4540   \notesfalse
4541 }
4542

```

we give ourselves a macro `\@@topsect` that needs only be evaluated once, so that the `\ifdefstring` conditionals work below.

```

4543 \str_if_empty:NTF \c__mikoslides_topsect_str {
4544   \str_set_eq:NN \__mikoslidestopsect \c__mikoslides_defaulttopsec_str
4545 }{
4546   \str_set_eq:NN \__mikoslidestopsect \c__mikoslides_topsect_str
4547 }
4548 </package>

```

Depending on the options, we either load the article-based omdoc or the beamer class (and set some counters).

```

4549 <*cls>
4550 \bool_if:NTF \c__mikoslides_notes_bool {
4551   \LoadClass{omdoc}
4552 }{
4553   \LoadClass[10pt,notheorems,xcolor={dvipsnames,svgnames}]{beamer}
4554   \newcounter{Item}
4555   \newcounter{paragraph}
4556   \newcounter{subparagraph}
4557   \newcounter{Hfootnote}
4558   \RequirePackage{omdoc}
4559 }

```

now it only remains to load the mikoslides package that does all the rest.

```

4560 \RequirePackage{mikoslides}
4561 </cls>

```

In `notes` mode, we also have to make the `beamer`-specific things available to `article` via the `beamerarticle` package. We use options to avoid loading theorem-like environments, since we want to use our own from the `STEX` packages. The first batch of packages we want are loaded on `mikoslides.sty`. These are the general ones, we will load the `STEX`-specific ones after we have done some work (e.g. defined the counters `m*`). Only the `stex-logo` package is already needed now for the default theme.

```

4562 \*package>
4563 \bool_if:NT \c__mikoslides_notes_bool {
4564   \RequirePackage{a4wide}
4565   \RequirePackage{marginnote}
4566   \PassOptionsToPackage{usenames,dvipsnames,svgnames}{xcolor}
4567   \RequirePackage{mdframed}
4568   \RequirePackage[noxcolor,noamsthm]{beamerarticle}
4569   \RequirePackage[bookmarks,bookmarksopen,bookmarksnumbered,breaklinks,hidelinks]{hyperref}
4570 }
4571 \RequirePackage{stex-compatibility}
4572 \RequirePackage{stex-tikzinput}
4573 \RequirePackage{etoolbox}
4574 \RequirePackage{amssymb}
4575 \RequirePackage{amsmath}
4576 \RequirePackage{comment}
4577 \RequirePackage{textcomp}
4578 \RequirePackage{url}
4579 \RequirePackage{graphicx}
4580 \RequirePackage{pgf}

```

39.2 Notes and Slides

For the lecture notes cases, we also provide the `\usetheme` macro that would otherwise come from the `beamer` class. While the latter loads `beamertheme<theme>.sty`, the notes version loads `beamernotestheme<theme>.sty`.²⁰

```

4581 \bool_if:NT \c__mikoslides_notes_bool {
4582   \renewcommand\usetheme[2] [] {\usepackage[#1]{beamernotestheme#2}}
4583 }

```

We define the sizes of slides in the notes. Somehow, we cannot get by with the same here.

```

4584 \newcounter{slide}
4585 \newlength{\slidewidth}\setlength{\slidewidth}{13.5cm}
4586 \newlength{\slideheight}\setlength{\slideheight}{9cm}

```

note The `note` environment is used to leave out text in the `slides` mode. It does not have a counterpart in OMDoc. So for course notes, we define the `note` environment to be a no-operation otherwise we declare the `note` environment as a comment via the `comment` package.

```

4587 \bool_if:NTF \c__mikoslides_notes_bool {
4588   \renewenvironment{note}{\ignorespaces}{\ignorespaces}{}
4589 }{
4590   \excludecomment{note}
4591 }

```

²⁰EDNOTE: MK: This is not ideal, but I am not sure that I want to be able to provide the full theme functionality there.

We first set up the slide boxes in `article` mode. We set up sizes and provide a box register for the frames and a counter for the slides.

```
4592 \bool_if:NT \c__mikoslides_notes_bool {
4593   \newlength{\slideframewidth}
4594   \setlength{\slideframewidth}{1.5pt}
```

frame We first define the keys.

```
4595 \cs_new_protected:Nn \__mikoslides_do_yes_param:Nn {
4596   \exp_args:Nx \str_if_eq:nnTF { \str_uppercase:n{ #2 } }{ yes }{
4597     \bool_set_true:N #1
4598   }{
4599     \bool_set_false:N #1
4600   }
4601 }
4602 \keys_define:nn{mikoslides / frame}{
4603   label .str_set_x:N = \l__mikoslides_frame_label_str,
4604   allowframebreaks .code:n = {
4605     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_allowframebreaks_bool { #1 }
4606   },
4607   allowdisplaybreaks .code:n = {
4608     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_allowdisplaybreaks_bool { #1 }
4609   },
4610   fragile .code:n = {
4611     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_fragile_bool { #1 }
4612   },
4613   shrink .code:n = {
4614     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_shrink_bool { #1 }
4615   },
4616   squeeze .code:n = {
4617     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_squeeze_bool { #1 }
4618   },
4619   t .code:n = {
4620     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_t_bool { #1 }
4621   },
4622 }
4623 \cs_new_protected:Nn \__mikoslides_frame_args:n {
4624   \str_clear:N \l__mikoslides_frame_label_str
4625   \bool_set_true:N \l__mikoslides_frame_allowframebreaks_bool
4626   \bool_set_true:N \l__mikoslides_frame_allowdisplaybreaks_bool
4627   \bool_set_true:N \l__mikoslides_frame_fragile_bool
4628   \bool_set_true:N \l__mikoslides_frame_shrink_bool
4629   \bool_set_true:N \l__mikoslides_frame_squeeze_bool
4630   \bool_set_true:N \l__mikoslides_frame_t_bool
4631   \keys_set:nn { mikoslides / frame }{ #1 }
4632 }
```

We define the environment, read them, and construct the slide number and label.

```
4633 \renewenvironment{frame}[1][]{
4634   \__mikoslides_frame_args:n{#1}
4635   \sffamily
4636   \stepcounter{slide}
4637   \def\@currentlabel{\theslide}
4638   \str_if_empty:NF \l__mikoslides_frame_label_str {
4639     \label{\l__mikoslides_frame_label_str}
```

```
4640 }
```

We redefine the `itemize` environment so that it looks more like the one in `beamer`.

```
4641 \def\itemize@level{outer}
4642 \def\itemize@outer{outer}
4643 \def\itemize@inner{inner}
4644 \renewcommand\newpage{\addtocounter{framenum}{1}}
4645 \newcommand\metakeys@show@keys[2]{\marginnote{\scriptsize ##2}}
4646 \renewenvironment{itemize}{
4647   \ifx\itemize@level\itemize@outer
4648     \def\itemize@label{$\rhd$}
4649   \fi
4650   \ifx\itemize@level\itemize@inner
4651     \def\itemize@label{$\scriptstyle\rhd$}
4652   \fi
4653   \begin{list}
4654     {\itemize@label}
4655     {\setlength{\labelsep}{.3em}
4656      \setlength{\labelwidth}{.5em}
4657      \setlength{\leftmargin}{1.5em}
4658     }
4659   \edef\itemize@level{\itemize@inner}
4660 }{
4661   \end{list}
4662 }
```

We create the box with the `mdframed` environment from the `equinymous` package.

```
4663 \begin{mdframed}[linewidth=\slideframewidth,skipabove=1ex,skipbelow=1ex,userdefinedwidth]
4664 }{
4665   \medskip\miko@slidelabel\end{mdframed}
4666 }
```

Now, we need to redefine the `frametitle` (we are still in course notes mode).

`\frametitle`

```
4667 \renewcommand{\frametitle}[1]{\Large\bf\sf\color{blue}{#1}}\medskip
4668 }
```

(End definition for \frametitle. This function is documented on page ??.)

EdN:21

`\pause` 21

```
4669 \bool_if:NT \c__mikoslides_notes_bool {
4670   \newcommand\pause{}
4671 }
```

(End definition for \pause. This function is documented on page ??.)

`nomtext`

```
4672 \bool_if:NTF \c__mikoslides_notes_bool {
4673   \newenvironment{nomtext}[1][\begin{sparagraph}[#1]}{\end{sparagraph}}
4674 }{
4675   \excludecomment{nomtext}
4676 }
```

²¹EdNOTE: MK: fake it in notes mode for now

nomgroup

```
4677 \bool_if:NTF \c__mikoslides_notes_bool {  
4678   \newenvironment{nomgroup}[2] [] {\begin{omgroup}[#1]{#2}}{\end{omgroup}}  
4679 }{  
4680   \excludecomment{nomgroup}  
4681 }
```

\inputref@*skip We customize the hooks for in \inputref.

```
4702 \def\inputref@preskip{\smallskip}  
4703 \def\inputref@postskip{\medskip}
```

(End definition for \inputref@*skip. This function is documented on page ??.)

\inputref*

```
4704 \let\orig@inputref\inputref  
4705 \def\inputref{\@ifstar\ninputref\orig@inputref}  
4706 \newcommand\ninputref[2] [] {  
4707   \bool_if:NT \c__mikoslides_notes_bool {  
4708     \orig@inputref[#1]{#2}  
4709   }  
4710 }
```

(End definition for \inputref*. This function is documented on page ??.)

39.3 Header and Footer Lines

Now, we set up the infrastructure for the footer line of the slides, we use boxes for the logos, so that they are only loaded once, that considerably speeds up processing.

\setslidelogo The default logo is the \TeX logo. Customization can be done by `\setslidelogo{<logo name>}`.

```

4711 \newlength{\slidelogoheight}
4712
4713 \bool_if:NTF \c__mikoslides_notes_bool {
4714   \setlength{\slidelogoheight}{.4cm}
4715 }{
4716   \setlength{\slidelogoheight}{1cm}
4717 }
4718 \newsavebox{\slidelogo}
4719 \sbox{\slidelogo}{\TeX}
4720 \newrobustcmd{\setslidelogo}[1]{
4721   \sbox{\slidelogo}{\includegraphics[height=\slidelogoheight]{#1}}
4722 }
```

(End definition for `\setslidelogo`. This function is documented on page ??.)

\setsource `\source` stores the writer's name. By default it is *Michael Kohlhase* since he is the main user and designer of this package. `\setsource{<name>}` can change the writer's name.

```

4723 \def\source{Michael Kohlhase}% customize locally
4724 \newrobustcmd{\setsource}[1]{\def\source{#1}}
```

(End definition for `\setsource`. This function is documented on page ??.)

\setlicensing Now, we set up the copyright and licensing. By default we use the Creative Commons Attribution-ShareAlike license to strengthen the public domain. If package `hyperref` is loaded, then we can attach a hyperlink to the license logo. `\setlicensing[<url>]{<logo name>}` is used for customization, where `<url>` is optional.

```

4725 \def\copyrightnotice{\footnotesize\copyright : \hspace{.3ex}{\source}}
4726 \newsavebox{\cclogo}
4727 \sbox{\cclogo}{\includegraphics[height=\slidelogoheight]{cc_somerights}}
4728 \newif\ifcchref\cchreffalse
4729 \AtBeginDocument{
4730   \ifpackageloaded{hyperref}{\cchreftrue}{\cchreffalse}
4731 }
4732 \def\licensing{
4733   \ifcchref
4734     \href{http://creativecommons.org/licenses/by-sa/2.5/}{\usebox{\cclogo}}
4735   \else
4736     {\usebox{\cclogo}}
4737   \fi
4738 }
4739 \newrobustcmd{\setlicensing}[2][]{
4740   \def@url{#1}
4741   \sbox{\cclogo}{\includegraphics[height=\slidelogoheight]{#2}}
4742   \ifx@url@empty
4743     \def\licensing{{\usebox{\cclogo}}}
4744   \else
4745     \def\licensing{
```

```

4746     \ifcchref
4747     \href{#1}{\usebox{\cclogo}}
4748   \else
4749     {\usebox{\cclogo}}
4750   \fi
4751 }
4752 \fi
4753 }

```

(End definition for `\setlicensing`. This function is documented on page ??.)

EdN:22

`\slidelabel` Now, we set up the slide label for the article mode.²²

```

4754 \newrobustcmd\miko@slidelabel{
4755   \vbox to \slidelogoheight{
4756     \vss\hbox to \slidewidth
4757     {\licensing\hfill\copyrightnotice\hfill\arabic{slide}\hfill\usebox{\slidelogo}}
4758   }
4759 }

```

(End definition for `\slidelabel`. This function is documented on page ??.)

39.4 Frame Images

`\frameimage` We have to make sure that the width is overwritten, for that we check the `\Gin@ewidth` macro from the `graphicx` package. We also add the `label` key.

```

4760 \def\Gin@mhrepos{}
4761 \define@key{Gin}{mhrepos}{\def\Gin@mhrepos{#1}}
4762 \define@key{Gin}{label}{\def\currentlabel{\arabic{slide}}\label{#1}}
4763 \newrobustcmd\frameimage[2][]{
4764   \stepcounter{slide}
4765   \bool_if:NT \c__mikoslides_frameimages_bool {
4766     \def\Gin@ewidth{}\setkeys{Gin}{#1}
4767     \bool_if:NF \c__mikoslides_notes_bool { \vfill }
4768     \begin{center}
4769       \bool_if:NTF \c__mikoslides_fiboxed_bool {
4770         \fbox{
4771           \ifx\Gin@ewidth\@empty
4772             \ifx\Gin@mhrepos\@empty
4773               \mhgraphics[width=\slidewidth,#1]{#2}
4774             \else
4775               \mhgraphics[width=\slidewidth,#1,mhrepos=\Gin@mhrepos]{#2}
4776             \fi
4777           \else% Gin@ewidth empty
4778             \ifx\Gin@mhrepos\@empty
4779               \mhgraphics[#1]{#2}
4780             \else
4781               \mhgraphics[#1,mhrepos=\Gin@mhrepos]{#2}
4782             \fi
4783           \fi% Gin@ewidth empty
4784         }
4785       }{
4786         \ifx\Gin@ewidth\@empty

```

²²EdNOTE: see that we can use the themes for the slides some day. This is all fake.

```

4787         \ifx\Gin@mhrepos\empty
4788             \mhgraphics[width=\slidewidth,#1]{#2}
4789         \else
4790             \mhgraphics[width=\slidewidth,#1,mhrepos=\Gin@mhrepos]{#2}
4791         \fi
4792         \ifx\Gin@mhrepos\empty

4794         \else
4795             \mhgraphics[#1,mhrepos=\Gin@mhrepos]{#2}
4796         \fi
4797     \fi% Gin@ewidth empty
4798 }
4799 \end{center}
4800 \par\strut\hfill{\footnotesize Slide \arabic{slide}}%
4801 \bool_if:NF \c__mikoslides_notes_bool { \vfill }
4802 }
4803 } % ifmks@sty@frameimages

```

(End definition for `\frameimage`. This function is documented on page ??.)

39.5 Colors and Highlighting

We first specify sans serif fonts as the default.

```

4804 \sffamily

```

Now, we set up an infrastructure for highlighting phrases in slides. Note that we use content-oriented macros for highlighting rather than directly using color markup. The first thing to do is to adapt the green so that it is dark enough for most beamers

```

4805 \AddToHook{begindocument}{
4806     \definecolor{green}{rgb}{0,.5,0}
4807     \definecolor{purple}{cmk}{.3,1,0,.17}
4808 }

```

We customize the `\defemph`, `\symrefemph`, `\compemph`, and `\titleemph` macros with colors. Furthermore we customize the `__omtextlec` macro for the appearance of line end comments in `\lec`.

```

4809 % \def\STpresent#1{\textcolor{blue}{#1}}
4810 \def\defemph#1{\textcolor{magenta}{#1}}
4811 \def\symrefemph#1{\textcolor{cyan}{#1}}
4812 \def\compemph#1{\textcolor{blue}{#1}}
4813 \def\titleemph#1{\textcolor{blue}{#1}}
4814 \def\__omtext_lec#1(\textcolor{green}{#1})

```

I like to use the dangerous bend symbol for warnings, so we provide it here.

`\textwarning` as the macro can be used quite often we put it into a box register, so that it is only loaded once.

```

4815 \pgfdeclareimage[width=.8em]{miko@small@dbend}{dangerous-bend}
4816 \def\smalltextwarning{
4817     \pgfuseimage{miko@small@dbend}
4818     \xspace
4819 }
4820 \pgfdeclareimage[width=1.2em]{miko@dbend}{dangerous-bend}

```

```

4821 \newrobustcmd\textwarning{
4822   \raisebox{-.05cm}{\pgfuseimage{miko@dbend}}
4823   \xspace
4824 }
4825 \pgfdeclareimage[width=2.5em]{miko@big@dbend}{dangerous-bend}
4826 \newrobustcmd\bigtextwarning{
4827   \raisebox{-.05cm}{\pgfuseimage{miko@big@dbend}}
4828   \xspace
4829 }
(End definition for \textwarning. This function is documented on page ??.)
4830 \newrobustcmd\putgraphicsat[3]{
4831   \begin{picture}(0,0)\put(#1){\includegraphics[#2]{#3}}\end{picture}
4832 }
4833 \newrobustcmd\putat[2]{
4834   \begin{picture}(0,0)\put(#1){#2}\end{picture}
4835 }

```

39.6 Sectioning

If the `sectocframes` option is set, then we make section frames. We first define counters for `part` and `chapter`, which `beamer.cls` does not have and we make the `section` counter which it does dependent on `chapter`.

```

4836 \bool_if:NT \c__mikoslides_sectocframes_bool {
4837   \str_if_eq:VnTF \__mikoslidestopsect{part}{
4838     \newcounter{chapter}\counterwithin*{section}{chapter}
4839   }{
4840     \str_if_eq:VnT\__mikoslidestopsect{chapter}{
4841       \newcounter{chapter}\counterwithin*{section}{chapter}
4842     }
4843   }
4844 }

```

`\section@level` We set the `\section@level` counter that governs sectioning according to the class options. We also introduce the sectioning counters accordingly.

```

\section@level
4845 \def\part@prefix{}
4846 \@ifpackageloaded{omdoc}{}{
4847   \str_case:VnF \__mikoslidestopsect {
4848     {part}{
4849       \int_set:Nn \l_document_structure_section_level_int {0}
4850       \def\thesection{\arabic{chapter}.\arabic{section}}
4851       \def\part@prefix{\arabic{chapter}.}
4852     }
4853     {chapter}{
4854       \int_set:Nn \l_document_structure_section_level_int {1}
4855       \def\thesection{\arabic{chapter}.\arabic{section}}
4856       \def\part@prefix{\arabic{chapter}.}
4857     }
4858   }{
4859     \int_set:Nn \l_document_structure_section_level_int {2}
4860     \def\part@prefix{}

```

```

4861 }
4862 }
4863
4864 \bool_if:NF \c__mikoslides_notes_bool { % only in slides

```

(End definition for \section@level. This function is documented on page ??.)

The new counters are used in the omgroup environment that choses the L^AT_EX sectioning macros according to \section@level.

omgroup

```

```

(End definition for \excursiongroup. This function is documented on page ??.)

Chapter 40

The Implementation

40.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. They all come with their own conditionals that are set by the options.

```
4988 <*package>
4989 <@@=problems>
4990 \ProvidesExplPackage{problem}{2019/03/20}{1.3}{Semantic Markup for Problems}
4991 \RequirePackage{l3keys2e,expl-keystr-compatible}
4992
4993 \keys_define:nn { problem / pkg }{
4994   notes      .default:n    = { true },
4995   notes      .bool_set:N   = \c__problems_notes_bool,
4996   gnotes     .default:n    = { true },
4997   gnotes     .bool_set:N   = \c__problems_gnotes_bool,
4998   hints      .default:n    = { true },
4999   hints      .bool_set:N   = \c__problems_hints_bool,
5000   solutions  .default:n    = { true },
5001   solutions  .bool_set:N   = \c__problems_solutions_bool,
5002   pts        .default:n    = { true },
5003   pts        .bool_set:N   = \c__problems_pts_bool,
5004   min        .default:n    = { true },
5005   min        .bool_set:N   = \c__problems_min_bool,
5006   boxed      .default:n    = { true },
5007   boxed      .bool_set:N   = \c__problems_boxed_bool,
5008   unknown    .code:n       = {}
5009 }
5010 \def\solutionstrue{
5011   \bool_set_true:N \c__problems_solutions_bool
5012 }
5013 \def\solutionsfalse{
5014   \bool_set_false:N \c__problems_solutions_bool
5015 }
5016
5017 \ProcessKeysOptions{ problem / pkg }
```

Then we make sure that the necessary packages are loaded (in the right versions).

```

5018 \RequirePackage{stex-compatibility}
5019 \RequirePackage{comment}

```

The next package relies on the L^AT_EX3 kernel, which L^AT_EXML only partially supports. As it is purely presentational, we only load it when the boxed option is given and we run L^AT_EXML.

```

5020 \bool_if:NT \c__problems_boxed_bool { \RequirePackage{mdframed} }

```

`\prob@*@kw` For multilinguality, we define internal macros for keywords that can be specialized in *.ldf files.

```

5021 \def\prob@problem@kw{Problem}
5022 \def\prob@solution@kw{Solution}
5023 \def\prob@hint@kw{Hint}
5024 \def\prob@note@kw{Note}
5025 \def\prob@gnote@kw{Grading}
5026 \def\prob@pt@kw{pt}
5027 \def\prob@min@kw{min}

```

(End definition for `\prob@*@kw`. This function is documented on page ??.)

For the other languages, we set up triggers

```

5028 \@ifpackageloaded{babel}{
5029   \clist_set:Nx \l_tmpa_clist {\bbl@loaded}
5030   \clist_if_in:NnT \l_tmpa_clist {ngerman}{
5031     \input{problem-ngerman.ldf}
5032   }
5033   \clist_if_in:NnT \l_tmpa_clist {finnish}{
5034     \input{problem-finnish.ldf}
5035   }
5036   \clist_if_in:NnT \l_tmpa_clist {french}{
5037     \input{problem-french.ldf}
5038   }
5039   \clist_if_in:NnT \l_tmpa_clist {russian}{
5040     \input{problem-russian.ldf}
5041   }
5042 }{}

```

40.2 Problems and Solutions

We now prepare the KeyVal support for problems. The key macros just set appropriate internal macros.

```

5043 \keys_define:nn{ problem / problem }{
5044   id      .str_set:x:N = \l__problems_prob_id_str,
5045   pts     .tl_set:N    = \l__problems_prob_pts_tl,
5046   min     .tl_set:N    = \l__problems_prob_min_tl,
5047   title   .tl_set:N    = \l__problems_prob_title_tl,
5048   refnum  .int_set:N   = \l__problems_prob_refnum_int
5049 }
5050 \cs_new_protected:Nn \__problems_prob_args:n {
5051   \str_clear:N \l__problems_prob_id_str
5052   \tl_clear:N \l__problems_prob_pts_tl
5053   \tl_clear:N \l__problems_prob_min_tl
5054   \tl_clear:N \l__problems_prob_title_tl

```

```

5055 \int_zero_new:N \l__problems_prob_refnum_int
5056 \keys_set:nn { problem / problem }{ #1 }
5057 \int_compare:nNnT \l__problems_prob_refnum_int = 0 {
5058   \let\l__problems_inclprob_refnum_int\undefined
5059 }
5060 }

```

Then we set up a counter for problems.

`\numberproblemsin`

```

5061 \newcounter{problem}
5062 \newcommand\numberproblemsin[1]{\@addtoreset{problem}{#1}}

```

(End definition for `\numberproblemsin`. This function is documented on page ??.)

`\prob@label` We provide the macro `\prob@label` to redefine later to get context involved.

```

5063 \newcommand\prob@label[1]{#1}

```

(End definition for `\prob@label`. This function is documented on page ??.)

`\prob@number` We consolidate the problem number into a reusable internal macro

```

5064 \newcommand\prob@number{
5065   \int_if_exist:NTF \l__problems_inclprob_refnum_int {
5066     \prob@label{\int_use:N \l__problems_inclprob_refnum_int }
5067   }{
5068     \int_if_exist:NTF \l__problems_prob_refnum_int {
5069       \prob@label{\int_use:N \l__problems_prob_refnum_int }
5070     }{
5071       \prob@label\theproblem
5072     }
5073   }
5074 }

```

(End definition for `\prob@number`. This function is documented on page ??.)

`\prob@title` We consolidate the problem title into a reusable internal macro as well. `\prob@title` takes three arguments the first is the fallback when no title is given at all, the second and third go around the title, if one is given.

```

5075 \newcommand\prob@title[3]{%
5076   \tl_if_exist:NTF \l__problems_inclprob_title_tl {
5077     #2 \l__problems_inclprob_title_tl #3
5078   }{
5079     \tl_if_exist:NTF \l__problems_prob_title_tl {
5080       #2 \l__problems_prob_title_tl #3
5081     }{
5082       #1
5083     }
5084   }
5085 }

```

(End definition for `\prob@title`. This function is documented on page ??.)

With these the problem header is a one-liner

`\prob@heading` We consolidate the problem header line into a separate internal macro that can be reused in various settings.

```

5086 \def\prob@heading{
5087   \prob@problem@kw~\prob@number\prob@title{~}{~}{~}\strut}
5088   %\sref@label{id{\prob@problem@kw~\prob@number}}{~}
5089 }

```

(End definition for `\prob@heading`. This function is documented on page ??.)

With this in place, we can now define the `problem` environment. It comes in two shapes, depending on whether we are in boxed mode or not. In both cases we increment the problem number and output the points and minutes (depending) on whether the respective options are set.

`problem`

```

5090 \newenvironment{problem}[1][1]{
5091   \__problems_prob_args:n{#1}%\sref@target%
5092   \@in@omtexttrue% we are in a statement (for inline definitions)
5093   \stepcounter{problem}\record@problem
5094   \def\current@section@level{\prob@problem@kw}
5095   \par\noindent\textbf{\prob@heading\show@pts\show@min\\ignorespacesandpars
5096 }%
5097 {\smallskip}
5098 \bool_if:NT \c__problems_boxed_bool {
5099   \surroundwithmdframed{problem}
5100 }

```

`\record@problem` This macro records information about the problems in the `*.aux` file.

```

5101 \def\record@problem{
5102   \protected@write\@auxout{}
5103   {
5104     \string\@problem{\prob@number}
5105     {
5106       \tl_if_exist:NTF \l__problems_inclprob_pts_tl {
5107         \l__problems_inclprob_pts_tl
5108       }{
5109         \l__problems_prob_pts_tl
5110       }
5111     }%
5112     {
5113       \tl_if_exist:NTF \l__problems_inclprob_min_tl {
5114         \l__problems_inclprob_min_tl
5115       }{
5116         \l__problems_prob_min_tl
5117       }
5118     }
5119   }
5120 }

```

(End definition for `\record@problem`. This function is documented on page ??.)

`\@problem` This macro acts on a problem's record in the `*.aux` file. It does not have any functionality here, but can be redefined elsewhere (e.g. in the `assignment` package).

```

5121 \def\@problem#1#2#3{}

```

(End definition for \@problem. This function is documented on page ??.)

solution The `solution` environment is similar to the `problem` environment, only that it is independent of the boxed mode. It also has it's own keys that we need to define first.

```

5122 \keys_define:nn { problem / solution }{
5123   id          .str_set_x:N = \l__problems_solution_id_str ,
5124   for         .tl_set:N    = \l__problems_solution_for_tl ,
5125   height      .dim_set:N   = \l__problems_solution_height_dim ,
5126   creators    .clist_set:N = \l__problems_solution_creators_clist ,
5127   contributors .clist_set:N = \l__problems_solution_contributors_clist ,
5128   srccite     .tl_set:N    = \l__problems_solution_srccite_tl
5129 }
5130 \cs_new_protected:Nn \__problems_solution_args:n {
5131   \str_clear:N \l__problems_solution_id_str
5132   \tl_clear:N \l__problems_solution_for_tl
5133   \tl_clear:N \l__problems_solution_srccite_tl
5134   \clist_clear:N \l__problems_solution_creators_clist
5135   \clist_clear:N \l__problems_solution_contributors_clist
5136   \dim_zero:N \l__problems_solution_height_dim
5137   \keys_set:nn { problem / solution }{ #1 }
5138 }

```

the next step is to define a helper macro that does what is needed to start a solution.

```

5139 \newcommand\@startsolution[1][ ]{
5140   \__problems_solution_args:n { #1 }
5141   \@in@omtexttrue% we are in a statement.
5142   \bool_if:NF \c__problems_boxed_bool { \hrule }
5143   \smallskip\noindent
5144   {\textbf\prob@solution@kw : \enspace}
5145   \begin{small}
5146   \def\current@section@level{\prob@solution@kw}
5147   \ignorespacesandpars
5148 }

```

\startsolutions for the `\startsolutions` macro we use the `\specialcomment` macro from the `comment` package. Note that we use the `\@startsolution` macro in the start codes, that parses the optional argument.

```

5149 \newcommand\startsolutions{
5150   \specialcomment{solution}{\@startsolution}{
5151     \bool_if:NF \c__problems_boxed_bool {
5152       \hrule\medskip
5153     }
5154     \end{small}%
5155   }
5156   \bool_if:NT \c__problems_boxed_bool {
5157     \surroundwithmdframed{solution}
5158   }
5159 }

```

(End definition for \startsolutions. This function is documented on page ??.)

\stopsolutions

```

5160 \newcommand\stopsolutions{\excludecomment{solution}}

```

(End definition for \stopsolutions. This function is documented on page ??.)

so it only remains to start/stop solutions depending on what option was specified.

```

5161 \bool_if:NTF \c__problems_solutions_bool {

5257 } %solutions

```

(End definition for \mcc. This function is documented on page ??.)

40.4 Including Problems

`\includeproblem` The `\includeproblem` command is essentially a glorified `\input` statement, it sets some internal macros first that overwrite the local points. Importantly, it resets the `inclprob` keys after the input.

```

5258
5259 \keys_define:nn{ problem / inclproblem }{
5260   % id      .str_set_x:N = \l__problems_inclprob_id_str,
5261   pts      .tl_set:N    = \l__problems_inclprob_pts_tl,
5262   min      .tl_set:N    = \l__problems_inclprob_min_tl,
5263   title    .tl_set:N    = \l__problems_inclprob_title_tl,
5264   refnum   .int_set:N    = \l__problems_inclprob_refnum_int,
5265   mhrepos  .str_set_x:N = \l__problems_inclprob_mhrepos_str
5266 }
5267 \cs_new_protected:Nn \__problems_inclprob_args:n {
5268   % \str_clear:N \l__problems_prob_id_str
5269   \tl_clear:N \l__problems_inclprob_pts_tl
5270   \tl_clear:N \l__problems_inclprob_min_tl
5271   \tl_clear:N \l__problems_inclprob_title_tl
5272   \int_zero_new:N \l__problems_inclprob_refnum_int
5273   \str_clear:N \l__problems_inclprob_mhrepos_str
5274   \keys_set:nn { problem / inclproblem }{ #1 }
5275   \tl_if_empty:NT \l__problems_inclprob_pts_tl {
5276     \let\l__problems_inclprob_pts_tl\undefined
5277   }
5278   \tl_if_empty:NT \l__problems_inclprob_min_tl {
5279     \let\l__problems_inclprob_min_tl\undefined
5280   }
5281   \tl_if_empty:NT \l__problems_inclprob_title_tl {
5282     \let\l__problems_inclprob_title_tl\undefined
5283   }
5284   \int_compare:nNnT \l__problems_inclprob_refnum_int = 0 {
5285     \let\l__problems_inclprob_refnum_int\undefined
5286   }
5287 }
5288
5289 \cs_new_protected:Nn \__problems_inclprob_clear: {

5306   }
5307   \__problems_inclprob_clear:
5308 }

```

(End definition for \includeproblem. This function is documented on page ??.)

40.5 Reporting Metadata

For messages it is OK to have them in English as the whole documentation is, and we can therefore assume authors can deal with it.

```

5309 \AddToHook{enddocument}{
5310   \bool_if:NT \c__problems_pts_bool {
5311     \message{Total:~\arabic{pts}~points}
5312   }
5313   \bool_if:NT \c__problems_min_bool {
5314     \message{Total:~\arabic{min}~minutes}
5315   }
5316 }

```

The margin pars are reader-visible, so we need to translate

```

5317 \def\pts#1{
5318   \bool_if:NT \c__problems_pts_bool {
5319     \marginpar{#1~\prob@pt@kw}
5320   }
5321 }
5322 \def\min#1{
5323   \bool_if:NT \c__problems_min_bool {
5324     \marginpar{#1~\prob@min@kw}
5325   }
5326 }

```

\show@pts The **\show@pts** shows the points: if no points are given from the outside and also no points are given locally do nothing, else show and add. If there are outside points then we show them in the margin.

```

5327 \newcounter{pts}
5328 \def\show@pts{
5329   \tl_if_exist:NTF \l__problems_inclprob_pts_tl {
5330     \bool_if:NT \c__problems_pts_bool {
5331       \marginpar{\l__problems_inclprob_pts_tl;\prob@pt@kw\smallskip}
5332       \addtocounter{pts}{\l__problems_inclprob_pts_tl}

```

```

5333     }
5334   }{
5335     \tl_if_exist:NT \l__problems_prob_pts_tl {
5336       \bool_if:NT \c__problems_pts_bool {
5337         \marginpar{\l__problems_prob_pts_tl;\prob@pt@kw\smallskip}
5338         \addtocounter{pts}{\l__problems_prob_pts_tl}
5339       }
5340     }
5341   }
5342 }

```

(End definition for \show@pts. This function is documented on page ??.)
and now the same for the minutes

\show@min

```

5343 \newcounter{min}
5344 \def\show@min{
5345   \tl_if_exist:NTF \l__problems_inclprob_min_tl {
5346     \bool_if:NT \c__problems_min_bool {
5347       \marginpar{\l__problems_inclprob_pts_tl;min}
5348       \addtocounter{min}{\l__problems_inclprob_min_tl}
5349     }
5350   }{
5351     \tl_if_exist:NT \l__problems_prob_min_tl {
5352       \bool_if:NT \c__problems_min_bool {
5353         \marginpar{\l__problems_prob_min_tl;min}
5354         \addtocounter{min}{\l__problems_prob_min_tl}
5355       }
5356     }
5357   }
5358 }
5359 \</package>

```

(End definition for \show@min. This function is documented on page ??.)

Chapter 41

Implementation: The hwexam Class

The functionality is spread over the `hwexam` class and package. The class provides the `document` environment and pre-loads some convenience packages, whereas the package provides the concrete functionality.

41.1 Class Options

To initialize the `hwexam` class, we declare and process the necessary options by passing them to the respective packages and classes they come from.

```
5360 <@@=hwexam>
5361 <*cls>
5362 \ProvidesExplClass{hwexam}{2019/03/20}{1.1}{homework assignments and exams}
5363 \RequirePackage{l3keys2e,expl-keystr-compatible}
5364 \DeclareOption*{
5365   \PassOptionsToClass{\CurrentOption}{omdoc}
5366   \PassOptionsToPackage{\CurrentOption}{stex}
5367   \PassOptionsToPackage{\CurrentOption}{hwexam}
5368   \PassOptionsToPackage{\CurrentOption}{tikzinput}
5369 }
5370 \ProcessOptions
```

We load `omdoc.cls`, and the desired packages. For the L^AT_EXML bindings, we make sure the right packages are loaded.

```
5371 \LoadClass{omdoc}
5372 \RequirePackage{stex}
5373 \RequirePackage{hwexam}
5374 \RequirePackage{tikzinput}
5375 \RequirePackage{graphicx}
5376 \RequirePackage{a4wide}
5377 \RequirePackage{amssymb}
5378 \RequirePackage{amstext}
5379 \RequirePackage{amsmath}
```

Finally, we register another keyword for the `document` environment. We give a default assignment type to prevent errors

```

5380 \newcommand\assig@default@type{\hwexam@assignment@kw}
5381 \def\document@hwexamtype{\assig@default@type}
5382 <@@=document_structure>
5383 \keys_define:nn { document-structure / document }{
5384 id .str_set_x:N = \c_document_structure_document_id_str,
5385 hwexamtype .tl_set:N = \document@hwexamtype
5386 }
5387 <@@=hwexam>
5388 </cls>

```

Chapter 42

Implementation: The hwexam Package

42.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. Some come with their own conditionals that are set by the options, the rest is just passed on to the `problems` package.

```
5389 \*package>
5390 \ProvidesExplPackage{hwexam}{2019/03/20}{1.1}{homework assignments and exams}
5391 \RequirePackage{l3keys2e,expl-keystr-compat}
5392
5393 \newif\iftest\testfalse
5394 \DeclareOption{test}{\testtrue}
5395 \newif\ifmultiple\multiplefalse
5396 \DeclareOption{multiple}{\multipletrue}
5397 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{problem}}
5398 \ProcessOptions
```

Then we make sure that the necessary packages are loaded (in the right versions).

```
5399 \RequirePackage{keyval}[1997/11/10]
5400 \RequirePackage{problem}
```

`\hwexam@*kw` For multilinguality, we define internal macros for keywords that can be specialized in `*.ldf` files.

```
5401 \newcommand\hwexam@assignment@kw{Assignment}
5402 \newcommand\hwexam@given@kw{Given}
5403 \newcommand\hwexam@due@kw{Due}
5404 \newcommand\hwexam@testemptypage@kw{This page was intentionally left blank for extra
5405   space}%
5406 \newcommand\correction@probs@kw{prob.}%
5407 \newcommand\correction@pts@kw{total}%
5408 \newcommand\correction@reached@kw{reached}%
5409 \newcommand\correction@sum@kw{Sum}%
5410 \newcommand\correction@grade@kw{grade}%
5411 \newcommand\correction@forgrading@kw{To be used for grading, do not write here}
```

(End definition for \hwexam@*kw. This function is documented on page ??.)

For the other languages, we set up triggers

```

5412 \ifpackageloaded{babel}{\RequirePackage[base]{babel}}
5413
5414 \clist_set:Nx \l_tmpa_clist {\bbl@loaded}
5415 \clist_if_in:NnT \l_tmpa_clist {ngerman}{
5416   \input{hwexam-ngerman.ldf}
5417 }
5418 \clist_if_in:NnT \l_tmpa_clist {finnish}{
5419   \input{hwexam-finnish.ldf}
5420 }
5421 \clist_if_in:NnT \l_tmpa_clist {french}{
5422   \input{hwexam-french.ldf}
5423 }
5424 \clist_if_in:NnT \l_tmpa_clist {russian}{
5425   \input{hwexam-russian.ldf}
5426 }

```

42.2 Assignments

Then we set up a counter for problems and make the problem counter inherited from `problem.sty` depend on it. Furthermore, we specialize the `\prob@label` macro to take the assignment counter into account.

```

5427 \newcounter{assignment}
5428 \numberproblemsin{assignment}
5429 \renewcommand\prob@label[1]{\arabic{assignment}.#1}

```

We will prepare the keyval support for the `assignment` environment.

```

5430 \keys_define:nn { hwexam / assignment } {
5431   id .str_set:N = \l__hwexam_assign_id_str,
5432   number .int_set:N = \l__hwexam_assign_number_int,
5433   title .tl_set:N = \l__hwexam_assign_title_tl,
5434   type .tl_set:N = \l__hwexam_assign_type_tl,
5435   given .tl_set:N = \l__hwexam_assign_given_tl,
5436   due .tl_set:N = \l__hwexam_assign_due_tl,
5437   loadmodules .code:n = {
5438     \bool_set_true:N \l__hwexam_assign_loadmodules_bool
5439   }
5440 }
5441 \cs_new_protected:Nn \__hwexam_assignment_args:n {
5442   \str_clear:N \l__hwexam_assign_id_str
5443   \int_set:Nn \l__hwexam_assign_number_int {-1}
5444   \tl_clear:N \l__hwexam_assign_title_tl
5445   \tl_clear:N \l__hwexam_assign_type_tl
5446   \tl_clear:N \l__hwexam_assign_given_tl
5447   \tl_clear:N \l__hwexam_assign_due_tl
5448   \bool_set_false:N \l__hwexam_assign_loadmodules_bool
5449   \keys_set:nn { hwexam / assignment }{ #1 }
5450 }

```

The next three macros are intermediate functions that handle the case gracefully, where the respective token registers are undefined.

The `\given@due` macro prints information about the given and due status of the assignment. Its arguments specify the brackets.

```

5451 \newcommand\given@due[2]{
5452 \bool_lazy_all:nF {
5453 { \tl_if_empty_p:V \l__hwexam_inclasssign_given_tl }
5454 { \tl_if_empty_p:V \l__hwexam_assign_given_tl }
5455 { \tl_if_empty_p:V \l__hwexam_inclasssign_due_tl }
5456 { \tl_if_empty_p:V \l__hwexam_assign_due_tl }
5457 }{ #1 }
5458
5459 \tl_if_empty:NTF \l__hwexam_inclasssign_given_tl {
5460 \tl_if_empty:NF \l__hwexam_assign_given_tl {
5461 \hwexam@given@kw\xspace\l__hwexam_assign_given_tl
5462 }
5463 }{
5464 \hwexam@given@kw\xspace\l__hwexam_inclasssign_given_tl
5465 }
5466
5467 \bool_lazy_or:nnF {
5468 \bool_lazy_and_p:nn {
5469 \tl_if_empty_p:V \l__hwexam_inclasssign_due_tl
5470 }{
5471 \tl_if_empty_p:V \l__hwexam_assign_due_tl
5472 }
5473 }{
5474 \bool_lazy_and_p:nn {
5475 \tl_if_empty_p:V \l__hwexam_inclasssign_due_tl
5476 }{
5477 \tl_if_empty_p:V \l__hwexam_assign_due_tl
5478 }
5479 }{ ,~ }
5480
5481 \tl_if_empty:NTF \l__hwexam_inclasssign_due_tl {
5482 \tl_if_empty:NF \l__hwexam_assign_due_tl {
5483 \hwexam@due@kw\xspace \l__hwexam_assign_due_tl
5484 }
5485 }{
5486 \hwexam@due@kw\xspace \l__hwexam_inclasssign_due_tl
5487 }
5488
5489 \bool_lazy_all:nF {
5490 { \tl_if_empty_p:V \l__hwexam_inclasssign_given_tl }
5491 { \tl_if_empty_p:V \l__hwexam_assign_given_tl }
5492 { \tl_if_empty_p:V \l__hwexam_inclasssign_due_tl }
5493 { \tl_if_empty_p:V \l__hwexam_assign_due_tl }
5494 }{ #2 }
5495 }

```

`\assignment@title` This macro prints the title of an assignment, the local title is overwritten, if there is one from the `\inputassignment`. `\assignment@title` takes three arguments the first is the fallback when no title is given at all, the second and third go around the title, if one is given.

```

5496 \newcommand\assignment@title[3]{

```

```

5497 \tl_if_empty:NTF \l__hwexam_inclassassign_title_tl {
5498 \tl_if_empty:NTF \l__hwexam_assign_title_tl {
5499 #1
5500 }{
5501 #2\l__hwexam_assign_title_tl#3
5502 }
5503 }{
5504 #2\l__hwexam_inclassassign_title_tl#3
5505 }
5506 }

```

(End definition for \assignment@title. This function is documented on page ??.)

\assignment@number Like \assignment@title only for the number, and no around part.

```

5507 \newcommand\assignment@number{
5508 \int_compare:nNnTF \l__hwexam_inclassassign_number_int = {-1} {
5509 \int_compare:nNnF \l__hwexam_assign_number_int = {-1} {
5510 \int_use:N \l__hwexam_assign_number_int
5511 }
5512 }{
5513 \int_use:N \l__hwexam_inclassassign_number_int
5514 }
5515 }

```

(End definition for \assignment@number. This function is documented on page ??.)

With them, we can define the central **assignment** environment. This has two forms (separated by \ifmultiple) in one we make a title block for an assignment sheet, and in the other we make a section heading and add it to the table of contents. We first define an assignment counter

assignment For the assignment environment we delegate the work to the @assignment environment that depends on whether multiple option is given.

```

5516 \newenvironment{assignment}[1][ ]{
5517 \__hwexam_assignment_args:n { #1 }
5518 %\sref@target
5519 \let\__hwexamnum\l__hwexam_assign_number_int
5520 \int_compare:nNnF \l__hwexam_assign_number_int = {-1} {
5521 \stepcounter{assignment}
5522 }{
5523 \setcounter{assignment}{\int_use:N\__hwexamnum}
5524 }
5525 \setcounter{problem}{0}
5526 \def\current@section@level{\document@hwexamtype}
5527 %\sref@label@id{\document@hwexamtype \thesection}
5528 \begin{@assignment}
5529 }{
5530 \end{@assignment}
5531 }

```

In the multi-assignment case we just use the omdoc environment for suitable sectioning.

```

5532 \def\__hwexasstitle{
5533 \protect\document@hwexamtype~\arabic{assignment}
5534 \assignment@title{}\;{}{}\; -- \given@due{}\}
5535 }

```

```

5536 \ifmultiple
5537 \newenvironment{@assignment}{
5538 \bool_if:NTF \l__hwexam_assign_loadmodules_bool {
5539 \begin{omgroup}[loadmodules]{\__hwexasstitle}
5540 }{
5541 \begin{omgroup}{\__hwexasstitle}
5542 }
5543 }{
5544 \end{omgroup}
5545 }

```

for the single-page case we make a title block from the same components.

```

5546 \else
5547 \newenvironment{@assignment}{
5548 \begin{center}\bf
5549 \Large\@title\strut\
5550 \document@hwexamtype~\arabic{assignment}\assignment@title{\;}{:\;}{\}
5551 \large\given@due{--\;}{\;}{--}
5552 \end{center}
5553 }{}
5554 \fi% multiple

```

42.3 Including Assignments

\in*assignment This macro is essentially a glorified `\include` statement, it just sets some internal macros first that overwrite the local points. Importantly, it resets the `inclassig` keys after the input.

```

5555 \keys_define:nn { hwexam / inclassignment } {
5556 %id .str_set_x:N = \l__hwexam_assign_id_str,
5557 number .int_set:N = \l__hwexam_inclassign_number_int,
5558 title .tl_set:N = \l__hwexam_inclassign_title_tl,
5559 type .tl_set:N = \l__hwexam_inclassign_type_tl,
5560 given .tl_set:N = \l__hwexam_inclassign_given_tl,
5561 due .tl_set:N = \l__hwexam_inclassign_due_tl,
5562 mhrepos .str_set_x:N = \l__hwexam_inclassign_mhrepos_str
5563 }
5564 \cs_new_protected:Nn \__hwexam_inclassignment_args:n {
5565 \int_set:Nn \l__hwexam_inclassign_number_int {-1}
5566 \tl_clear:N \l__hwexam_inclassign_title_tl
5567 \tl_clear:N \l__hwexam_inclassign_type_tl
5568 \tl_clear:N \l__hwexam_inclassign_given_tl
5569 \tl_clear:N \l__hwexam_inclassign_due_tl
5570 \str_clear:N \l__hwexam_inclassign_mhrepos_str
5571 \keys_set:nn { hwexam / inclassignment }{ #1 }
5572 }
5573 \__hwexam_inclassignment_args:n {}
5574
5575 \newcommand\inputassignment[2][ ]{
5576 \__hwexam_inclassignment_args:n { #1 }
5577 \str_if_empty:NTF \l__hwexam_inclassign_mhrepos_str {
5578 \input{#2}
5579 }{
5580 \stex_in_repository:nn{\l__hwexam_inclassign_mhrepos_str}{

```

```

5581 \input{\mhp{path}\l__hwexam_inclasssign_mhrepos_str}{#2}}
5582 }
5583 }
5584 \__hwexam_inclasssign_args:n {}
5585 }
