2 Manual

2.1 Archives and Imports

2.1.1 Namespaces

Ideally, $\text{\texttt{\textsf{S}}\text{\textsf{T}}\text{\textsf{E}}\text{\textsf{X}}}$ would use arbitrary URIs for modules, with no forced relationships between the *logical* namespace of a module and the *physical* location of the file declaring the module – like MMT does things.

Unfortunately, $\text{\texttt{\textsf{T}}\text{\textsf{E}}\text{\textsf{X}}}$ only provides very restricted access to the file system, so we are forced to generate namespaces systematically in such a way that they reflect the physical location of the associated files, so that $\text{\texttt{\textsf{S}}\text{\textsf{T}}\text{\textsf{E}}\text{\textsf{X}}}$ can resolve them accordingly. Largely, users need not concern themselves with namespaces at all, but for completeness sake, we describe how they are constructed:

- If $\text{\texttt{\textbackslash begin\{module\}\{Foo\}}}$ occurs in a file `/path/to/file/Foo[. $\langle lang \rangle$].tex` which does not belong to an archive, the namespace is `file://path/to/file`.
- If the same statement occurs in a file `/path/to/file/bar[. $\langle lang \rangle$].tex`, the namespace is `file://path/to/file/bar`.

In other words: outside of archives, the namespace corresponds to the file URI with the filename dropped iff it is equal to the module name, and ignoring the (optional) language suffix¹.

If the current file is in an archive, the procedure is the same except that the initial segment of the file path up to the archive's `source`-folder is replaced by the archive's namespace URI.

2.1.2 Paths in Import-Statements

Conversely, here is how namespaces/URIs and file paths are computed in import statements, exemplary $\text{\texttt{\textbackslash importmodule}}$:

- $\text{\texttt{\textbackslash importmodule\{Foo\}}}$ outside of an archive refers to module `Foo` in the current namespace. Consequently, `Foo` must have been declared earlier in the same document or, if not, in a file `Foo[. $\langle lang \rangle$].tex` in the same directory.
- The same statement *within* an archive refers to either the module `Foo` declared earlier in the same document, or otherwise to the module `Foo` in the archive's top-level namespace. In the latter case, it has to be declared in a file `Foo[. $\langle lang \rangle$].tex` directly in the archive's `source`-folder.
- Similarly, in $\text{\texttt{\textbackslash importmodule\{some/path?Foo\}}}$ the path `some/path` refers to either the sub-directory and relative namespace path of the current directory and namespace outside of an archive, or relative to the current archive's top-level namespace and `source`-folder, respectively.

The module `Foo` must either be declared in the file $\langle top-directory \rangle / \text{some/path} / \text{Foo}[. $\langle lang \rangle$].tex$, or in $\langle top-directory \rangle / \text{some/path}[. $\langle lang \rangle$].tex$ (which are checked in that order).

- Similarly, $\text{\texttt{\textbackslash importmodule[Some/Archive]\{some/path?Foo\}}}$ is resolved like the previous cases, but relative to the archive `Some/Archive` in the mathhub-directory.

¹which is internally attached to the module name instead, but a user need not worry about that.

- Finally, `\importmodule{full://uri?Foo}` naturally refers to the module `Foo` in the namespace `full://uri`. Since the file this module is declared in can not be determined directly from the URI, the module must be in memory already, e.g. by being referenced earlier in the same document.

Since this is less compatible with a modular development, using full URIs directly is discouraged.

3 Documentation

3.1 Utils

<code>\sTeX</code>	both print this sTeX logo.
<code>\stex</code>	

<code>\stex_debug:n</code>	<code>\stex_debug:n {⟨message⟩}</code>
----------------------------	--

Logs `⟨message⟩`, if the package option `debug` is used.

<code>\stex_kpsewhich:n</code>	<code>\stex_kpsewhich:n</code> executes <code>kpsewhich</code> and stores the return in <code>\l_stex_kpsewhich_return_str</code> . This does not require shell escaping.
--------------------------------	---

<code>\stex_addtosms:n</code>	Adds the provided code to the <code>.sms</code> -file of the document.
-------------------------------	--

3.1.1 SCALATEX, LATEXML and HTML Annotations

<code>\if@latexml</code>	L ^A T _E X2e and L ^A T _E X3 conditionals for L ^A T _E XML.
<code>\latexml_if_p:</code>	
<code>\latexml_if:T</code>	
<code>\latexml_if:F</code>	
<code>\latexml_if:TF</code>	

We have four macros for annotating generated HTML (via L^AT_EXML or SCALATEX) with attributes:

<code>\stex_annotate:nnn</code>	<code>\stex_annotate:nnn {⟨property⟩} {⟨resource⟩} {⟨content⟩}</code>
<code>\stex_annotate_invisible:nnn</code>	
<code>\stex_annotate_invisible:n</code>	

Annotates the HTML generated by `⟨content⟩` with

`property="stex:⟨property⟩", resource="⟨resource⟩".`

`\stex_annotate_invisible:n` adds the attributes

`stex:visible="false", style="display:none".`

`\stex_annotate_invisible:nnn` combines the functionality of both.

<code>stex_annotate_env</code>	$\begin{array}{l} \backslash\text{begin}\{\text{stex_annotate_env}\}\{\langle\text{property}\rangle\}\{\langle\text{resource}\rangle\} \\ \langle\text{content}\rangle \\ \backslash\text{end}\{\text{stex_annotate_env}\} \end{array}$ behaves like <code>\stex_annotate:nnn</code> $\{\langle\text{property}\rangle\} \{\langle\text{resource}\rangle\} \{\langle\text{content}\rangle\}$.
--------------------------------	---

3.1.2 Languages

<code>\c_stex_languages_prop</code>
<code>\c_stex_language_abbrevs_prop</code>

Map language abbreviations to their full babel names and vice versa. e.g. `\c_stex_languages_prop{en}` yields `english`, and `\c_stex_language_abbrevs_prop{english}` yields `en`.

3.2 Files, Paths, URIs

<code>\stex_path_from_string:Nn</code>	<code>\stex_path_from_string:Nn</code> $\langle\text{path-variable}\rangle \{\langle\text{string}\rangle\}$
<code>\stex_path_from_string:(NV cn cV)</code>	

turns the $\langle\text{string}\rangle$ into a path by splitting it at `/`-characters and stores the result in $\langle\text{path-variable}\rangle$. Also applies `\stex_path_canonicalize:N`.

<code>\stex_path_to_string:NN</code>
<code>\stex_path_to_string:N</code>

The inverse; turns a path into a string and stores it in the second argument variable, or leaves it in the input stream.

<code>\stex_path_canonicalize:N</code>
--

Canonicalizes the path provided; in particular, resolves `.` and `..` path segments.

<code>\stex_path_if_absolute_p:N</code> *
<code>\stex_path_if_absolute:NTF</code> *

Checks whether the path provided is *absolute*, i.e. starts with an empty segment

<code>\c_stex_pwd_seq</code>
<code>\c_stex_pwd_str</code>
<code>\c_stex_mainfile_seq</code>

Store the current working directory as path-sequence and string, respectively, and the (heuristically guessed) full path to the main file, based on the PWD and `\jobname`.

<code>\g_stex_currentfile_seq</code>

The file being currently processed (respecting `\input` etc.)

3.3 MathHub Archives

`\mathhub`
`\c_stex_mathhub_seq`
`\c_stex_mathhub_str`

We determine the path to the local MathHub folder via one of three means, in order of precedence:

1. The `mathhub` package option, or
2. the `\mathhub-macro`, if it has been defined before the `\usepackage{stex}`-statement, or
3. the `MATHHUB` system variable.

In all three cases, `\c_stex_mathhub_seq` and `\c_stex_mathhub_str` are set accordingly.

`\l_stex_current_repository_prop`

Always points to the *current* MathHub repository (if we currently are in one). Has the fields `id`, `ns` (namespace), `narr` (narrative namespace; currently not in use) and `deps` (dependencies; currently not in use).

`\stex_set_current_repository:n`

Sets the current repository to the one with the provided ID. calls `_stex_mathhub-do_manifest:n`, so works whether this repository's `MANIFEST.MF`-file has already been read or not.

`\stex_require_repository:n`

Calls `_stex_mathhub-do_manifest:n` iff the corresponding archive property list does not already exist, and adds a corresponding definition to the `.sms`-file.

3.4 The Module System

`\l_stex_current_module_prop`

All information of a module is stored as a property list. `\l_stex_current_module_prop` always points to the current module (if existent).

Most importantly, the `content`-field stores all the code to execute on activation; i.e. when this module is being included.

Additionally, it stores:

- The *name* in field `name`,
- the *namespace* in field `ns`,
- this module's *language* in field `lang`,
- if a language module that translates some other modules, the *original* module in field `sig` (for signature),
- the *metatheory* in field `meta`,
- the URIs of all *imported modules* in field `imports`,
- the names of all *declarations* in field `constants`,
- the *file* this module was declared in in field `file`,

`\stex_if_in_module_p: *` Conditional for whether we are currently in a module
`\stex_if_in_module:TF *`

`\stex_if_module_exists_p:n *`
`\stex_if_module_exists:nTF *`

Conditional for whether a module with the provided URI is already known.

`\stex_add_to_current_module:n`

Adds the provided tokens to the `content` field of the current module.

`\stex_add_constant_to_current_module:n`

Adds the declaration with the provided name to the `constants` field of the current module.

`\stex_add_import_to_current_module:n`

Adds the module with the provided full URI to the `imports` field of the current module.

<code>\stex_modules_compute_namespace:nN</code>	<code>\stex_modules_compute_namespace:nN</code> <code>{\langle namespace \rangle} {\langle path \rangle}</code>
---	--

Computes the namespace for file $\langle path \rangle$ in repository with namespace $\langle namespace \rangle$ as follows:

If the file is `.../source/sub/file.tex` and the namespace `http://some.namespace/foo`, then the namespace of is `http://some.namespace/foo/sub/file`.

<code>\stex_modules_current_namespace:</code>

Computes the current namespace

3.4.1 SMS Mode

“SMS Mode” is used when loading modules from external tex files. It deactivates any output and ignores all T_EX commands not explicitly allowed via the following lists:

<code>\g_stex_smsmode_allowedmacros_tl</code>

Macros that are executed as is; i.e. with the category code scheme used in SMS mode.

<code>\g_stex_smsmode_allowedmacros_escape_tl</code>
--

Macros that are executed with the category codes restored.

Importantly, these macros need to call `\stex_smsmode_set_codes:` after reading all arguments. Note, that `\stex_smsmode_set_codes:` takes care of checking whether we are in SMS mode in the first place, so calling this function eagerly is unproblematic.

<code>\g_stex_smsmode_allowedenvs_seq</code>
--

The names of environments that should be allowed in SMS mode. The corresponding `\begin`-statements are treated like the macros in `\g_stex_smsmode_allowedmacros_escape_tl`, so `\stex_smsmode_set_codes:` should be called at the end of the `\begin`-code. Since `\end`-statements take no arguments anyway, those are called with the SMS mode category code scheme active.

<code>\stex_if_smsmode_p: *</code>	Tests whether SMS mode is currently active.
<code>\stex_if_smsmode:TF *</code>	

<code>\stex_smsmode_set_codes:</code>

Sets the current category code scheme to that of the SMS mode, if SMS mode is currently active and if necessary.

This method should be called at the end of every macro or `\begin` environment code that are allowed in SMS mode.

<code>\stex_in_smsmode:nN</code>	<code>\stex_in_smsmode:nN {\langle name \rangle} {\langle code \rangle}</code>
----------------------------------	--

Executes $\langle code \rangle$ in SMS mode. $\langle name \rangle$ can be arbitrary, but should be distinct, since it allows for nesting `\stex_in_smsmode:nN` without spuriously terminating SMS mode.

3.4.2 Imports and Inheritance

<code>\importmodule</code>	<code>\importmodule[⟨archive-ID⟩]{⟨module-path⟩}</code>
----------------------------	---

Imports a module by reading it from a file and “activating” it. \TeX determines the module and its containing file by passing its arguments on to `\stex_import_module_path:nn`.

<code>\usemodule</code>	<code>\importmodule[⟨archive-ID⟩]{⟨module-path⟩}</code>
-------------------------	---

Like `\importmodule`, but does not export its contents; i.e. including the current module will not activate the used module

<code>\stex_import_module_uri:nn</code>	<code>\stex_import_module_uri:nn {⟨archive-ID⟩} {⟨module-path⟩}</code>
---	--

Determines the URI of a module by splitting `⟨module-path⟩` into `⟨path⟩?⟨name⟩`. If `⟨module-path⟩` does *not* contain a `?`-character, we consider it to be the `⟨name⟩`, and `⟨path⟩` to be empty.

If `⟨archive-ID⟩` is empty, it is automatically set to the ID of the current archive (if one exists).

1. If `⟨archive-ID⟩` is empty:

- (a) If `⟨path⟩` is empty, then `⟨name⟩` must have been declared earlier in the same file and retrievable from `\g_stex_modules_in_file_seq`, or a file with name `⟨name⟩.⟨lang⟩.tex` must exist in the same folder, containing a module `⟨name⟩`. That module should have the same namespace as the current one.

- (b) If `⟨path⟩` is not empty, it must point to the relative path of the containing file as well as the namespace.

2. Otherwise:

- (a) If `⟨path⟩` is empty, then `⟨name⟩` must have been declared earlier in the same file and retrievable from `\g_stex_modules_in_file_seq`, or a file with name `⟨name⟩.⟨lang⟩.tex` must exist in the top `source` folder of the archive, containing a module `⟨name⟩`.

That module should lie directly in the namespace of the archive.

- (b) If `⟨path⟩` is not empty, it must point to the path of the containing file as well as the namespace, relative to the namespace of the archive.

If a module by that namespace exists, it is returned. Otherwise, we call `\stex_require_module:nn` on the `source` directory of the archive to find the file.

<code>\stex_import_require_module:nnnn</code>

TODO

```
\g_stex_module_files_prop
\g_stex_modules_in_file_seq
```

A property list mapping file paths to the lists of all modules declared therein. `\g_stex_modules_in_file_seq` always points to the current file(-stream - `\inputs` are considered the same file).

4 Implementation

4.1 The sTeX document class

```
1 <*cls>
2 \RequirePackage{expl3,l3keys2e}
3 \ProvidesExplClass{stex}{2021/08/01}{1.9}{bla}
4 \LoadClass[border=1px,varwidth]{standalone}
5 \setlength\textwidth{15cm}
6 \g@addto@macro{\@parboxrestore}{\setlength\parskip{\baselineskip}}
7
8 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{stex}}
9 \ProcessOptions
10
11 \RequirePackage{stex}
12 </cls>
```

4.2 Preliminaries

```
13 <*package>
14 \RequirePackage{expl3,l3keys2e}
15 \ProvidesExplPackage{stex}{2021/08/01}{1.9}{bla}

Package options:
16 \keys_define:nn { stex } {
17   debug      .bool_set:N = \c_stex_debug_bool ,
18   showmods   .bool_set:N = \c_stex_showmods_bool ,
19   lang        .clist_set:N = \c_stex_languages_clist ,
20   mathhub     .tl_set_x:N = \mathhub ,
21   sms         .bool_set:N = \c_stex_persist_mode_bool
22 }
23 \ProcessKeysOptions { stex }
```

sTeX The sTeX logo:

```
24 \protected\def\stex{%
25   \@ifundefined{texorpdfstring}%
26   {\let\texorpdfstring\@firstoftwo}%
27   {}%
28   \texorpdfstring{\raisebox{-.5ex}{S\kern-.5exTeX}{sTeX}\xspace}%
29 }
30 \def\sTeX{\stex}
```

(End definition for `\sTeX`. This function is documented on page 4.)

Messages

```
31 \msg_new:nnn{stex}{debug}{}
32 \msg_new:nnn{stex}{warning/nomathhub}{
33   MATHHUB~system~variable~not~found~and~no~
```

```

34 \detokenize{\mathhub}-value~set!
35 }
36 \msg_new:nnn{stex}{error/norepository}{}
37 \msg_new:nnn{stex}{error/modulemissing}{}

```

\stex_debug:n Debug mode

```

38 \cs_new_protected:Nn \stex_debug:n {
39   \bool_if:nT{\c_stex_debug_bool}{
40     \exp_args:Nnnx\msg_set:nnn{stex}{debug}{\Debug:~#1\\}
41     \msg_term:nn{stex}{debug} % should be \msg_note:nn
42   }
43 }
44
45 \stex_debug:n{Debug~mode~on}

```

(End definition for \stex_debug:n. This function is documented on page 4.)

\c__stex_sms_iow File variable used for the sms-File

```

46 \iow_new:N \c__stex_sms_iow
47 \AddToHook{begindocument}{
48   \bool_if:NTF \c_stex_persist_mode_bool {
49     \ExplSyntaxOn \input{\jobname.sms} \ExplSyntaxOff
50   } {
51     \iow_open:Nn \c__stex_sms_iow {\jobname.sms}
52   }
53 }
54 \AddToHook{enddocument}{
55   \bool_if:NF \c_stex_persist_mode_bool {
56     \iow_close:N \c__stex_sms_iow
57   }
58 }

```

(End definition for \c__stex_sms_iow.)

\stex_addtosms:n

```

59 \cs_new_protected:Nn \stex_addtosms:n {
60   \iow_now:Nn \c__stex_sms_iow { #1 }
61 }

```

(End definition for \stex_addtosms:n. This function is documented on page 4.)

4.2.1 L^AT_EX_ML and S^CA_LT_EX

```

62 \RequirePackage{scalatex}

```

We add the namespace abbreviation `ns:stex="http://kwarc.info/ns/sTeX"` to S^CA_LT_EX:

```

63 \scalatex_add_Namespace:nn{stex}{http://kwarc.info/ns/sTeX}

```

\if@latexml Conditionals for L^AT_EX_ML:

```

\latexml_if_p:
\latexml_if:TF
64 \ifcsname if@latexml\endcsname\else
65   \expandafter\newif\csname if@latexml\endcsname\@latexmlfalse
66 \fi
67
68 \prg_new_conditional:Nnn \latexml_if: {p, T, F, TF} {

```

```

69 \if@latexml
70   \prg_return_true:
71 \else:
72   \prg_return_false:
73 \fi:
74 }

```

(End definition for `\if@latexml` and `\latexml_if:TF`. These functions are documented on page 4.)

4.2.2 HTML Annotations

```

75 <@@=stex_annotate>

```

`\l__stex_annotate_arg_tl` Used by annotation macros to ensure that the HTML output to annotate is not empty.

```

\c__stex_annotate_emptyarg_tl
76 \tl_new:N \l__stex_annotate_arg_tl
77 \tl_const:Nx \c__stex_annotate_emptyarg_tl {
78   \scalatex_if:TF {
79     \scalatex_direct_HTML:n { \c_ampersand_str lrm; }
80   }{~}
81 }

```

(End definition for `\l__stex_annotate_arg_tl` and `\c__stex_annotate_emptyarg_tl`.)

```

\__stex_annotate_checkempty:n

```

```

82 \cs_new_protected:Nn \__stex_annotate_checkempty:n {
83   \tl_set:Nn \l__stex_annotate_arg_tl { #1 }
84   \tl_if_empty:NT \l__stex_annotate_arg_tl {
85     \tl_set_eq:NN \l__stex_annotate_arg_tl \c__stex_annotate_emptyarg_tl
86   }
87 }

```

(End definition for `__stex_annotate_checkempty:n`.)

```

\stex_annotate:enw

```

We define four macros for introducing attributes in the HTML output. The definitions depend on the “backend” used (L^AT_EX_ML, S^CA_LT_EX, p_df_la_te_x).

```

\stex_annotate_invisible:n

```

```

\stex_annotate_invisible:nnn

```

The p_df_la_te_x-macros largely do nothing; the S^CA_LT_EX-implementations are pretty clear in what they do, the L^AT_EX_ML-implementations resort to perl bindings.

```

88 \scalatex_if:TF{
89   \cs_new_protected:Nn \stex_annotate:nnn {
90     \__stex_annotate_checkempty:n { #3 }

166   \cs_new_protected:Nn \stex_annotate_invisible:n {}
167   \cs_new_protected:Nn \stex_annotate_invisible:nnn {}
168   \NewDocumentEnvironment{stex_annotate_env} { m m } {\par}{\par}
169 }
170 }

```

(End definition for `\stex_annotate:nnn`, `\stex_annotate_invisible:n`, and `\stex_annotate_invisible:nnn`. These functions are documented on page 4.)

4.2.3 Languages

```

171 <@@=stex_language>

```

`\c_stex_languages_prop`
`\c_stex_language_abbrevs_prop`

We store language abbreviations in two (mutually inverse) property lists:

```

172 \prop_const_from_keyval:Nn \c_stex_languages_prop {
173   en = english ,
174   de = ngerman ,
175   ar = arabic ,
176   bg = bulgarian ,
177   ru = russian ,
178   fi = finnish ,
179   ro = romanian ,
180   tr = turkish ,
181   fr = french
182 }
183
184 \prop_const_from_keyval:Nn \c_stex_language_abbrevs_prop {
185   english   = en ,
186   ngerman   = de ,
187   arabic    = ar ,
188   bulgarian = bg ,
189   russian   = ru ,
190   finnish   = fi ,
191   romanian  = ro ,
192   turkish   = tr ,
193   french    = fr
194 }
195 % todo: chinese simplified (zhs)
196 %       chinese traditional (zht)

```

(End definition for `\c_stex_languages_prop` and `\c_stex_language_abbrevs_prop`. These variables are documented on page 5.)

we use the `lang`-package option to load the corresponding babel languages:

```

197 \clist_if_empty:NF \c_stex_languages_clist {
198   \clist_clear:N \l_tmpa_clist
199   \clist_map_inline:Nn \c_stex_languages_clist {
200     \prop_get:NnNTF \c_stex_languages_prop { #1 } \l_tmpa_str {
201       \clist_put_right:No \l_tmpa_clist \l_tmpa_str

```

```

202     } {
203     % TODO throw an error
204     }
205 }
206 \stex_debug:n {Languages:~\clist_use:Nn \l_tmpa_clist {,~} }
207 \RequirePackage[\clist_use:Nn \l_tmpa_clist ,]{babel}
208 }

```

4.3 Files, Paths and URIs

```

209 <@@=stex_path>

```

4.3.1 Generic Path Handling

We treat paths as L^AT_EX3-sequences (of the individual path segments, i.e. separated by a /-character) unix-style; i.e. a path is absolute if the sequence starts with an empty entry.

```

\stex_path_from_string:Nn
\stex_path_from_string:NV
\stex_path_from_string:cn
\stex_path_from_string:cV
210 %% TODO Windows paths
211 \cs_new_protected:Nn \stex_path_from_string:Nn {
212   \exp_args:NNe \str_set:Nn \l_tmpa_tl { #2 }
213   \tl_trim_spaces:N \l_tmpa_tl
214   \str_if_empty:NTF \l_tmpa_tl {
215     \seq_set_eq:NN #1 \c_empty_seq
216   }{
217     \exp_args:NNNo \seq_set_split:Nnn #1 / { \l_tmpa_tl }
218     \stex_path_canonicalize:N #1
219   }
220 }
221 \cs_generate_variant:Nn \stex_path_from_string:Nn

aaa/bbb/././		

4.3.3 File Hooks and Tracking

294 `<@=stex_files>`

We introduce hooks for file inputs that keep track of the absolute paths of files used. This will be useful to keep track of modules, their archives, namespaces etc.

Note that the absolute paths are only accurate in `\input`-statements for paths relative to the PWD, so they shouldn't be relied upon in any other setting than for \TeX -purposes.

`\g_stex_files_stack` keeps track of file changes

295 `\seq_gclear_new:N\g_stex_files_stack`

(End definition for `\g_stex_files_stack`.)

`\c_stex_mainfile_seq`

296 `\stex_path_from_string:Nn \c_stex_mainfile_seq {`
 297 `\c_stex_pwd_str/\g_file_curr_name_str.tex`
 298 `}`

(End definition for `\c_stex_mainfile_seq`. This variable is documented on page 5.)

`\g_stex_currentfile_seq` Hooks for file inputs that push/pop `\g_stex_files_stack` to update `\c_stex_mainfile_seq`.

299 `\seq_gclear_new:N\g_stex_currentfile_seq`
 300 `\AddToHook{file/before}{`
 301 `\stex_path_from_string:Nn\g_stex_currentfile_seq{\CurrentFilePath}`
 302 `\stex_path_if_absolute:NTF\g_stex_currentfile_seq{`
 303 `\exp_args:NNe\seq_put_right:Nn\g_stex_currentfile_seq{\CurrentFile}`
 304 `}{`
 305 `\stex_path_from_string:Nn\g_stex_currentfile_seq{`
 306 `\c_stex_pwd_str/\CurrentFilePath/\CurrentFile`
 307 `}`
 308 `}`
 309 `\seq_gset_eq:NN\g_stex_currentfile_seq\g_stex_currentfile_seq`
 310 `\exp_args:NNo\seq_gpush:Nn\g_stex_files_stack\g_stex_currentfile_seq`
 311 `}`
 312 `\AddToHook{file/after}{`
 313 `\seq_if_empty:NF\g_stex_files_stack{`
 314 `\seq_gpop:NN\g_stex_files_stack\l_tmpa_seq`
 315 `}`
 316 `\seq_if_empty:NTF\g_stex_files_stack{`
 317 `\seq_gset_eq:NN\g_stex_currentfile_seq\c_stex_mainfile_seq`
 318 `}{`
 319 `\seq_get:NN\g_stex_files_stack\l_tmpa_seq`
 320 `\seq_gset_eq:NN\g_stex_currentfile_seq\l_tmpa_seq`
 321 `}`
 322 `}`

(End definition for `\g_stex_currentfile_seq`. This variable is documented on page 5.)

4.4 MathHub Repositories

```
