# Chapter 1

## Stuff

### 1.1 Modules

---

`\sTeX`  
`\stex`

---

Both print this  $\text{\TeX}$  logo.

#### 1.1.1 Semantic Macros and Notations

Semantic macros invoke a formally declared symbol.

To declare a symbol (in a module), we use `\symdecl`, which takes as argument the name of the corresponding semantic macro, e.g. `\symdecl{foo}` introduces the macro `\foo`. Additionally, `\symdecl` takes several options, the most important one being its arity. `foo` as declared above yields a *constant* symbol. To introduce an *operator* which takes arguments, we have to specify which arguments it takes.

For example, to introduce binary multiplication, we can do `\symdecl[args=2]{mult}`. We can then supply the semantic macro with arbitrarily many notations, such as `\notation{mult}{#1 #2}`.

##### Example 1

```
\symdecl[args=2]{mult}
\notation{mult}{#1 #2}
 $\mult{a}{b}$ 
```

$ab$

Since usually, a freshly introduced symbol also comes with a notation from the start, the `\symdef` command combines `\symdecl` and `\notation`. So instead of the above, we could have also written

```
\symdef[args=2]{mult}{#1 #2}
```

Adding more notations like `\notation[cdot]{mult}{#1 \comp{\cdot} #2}` or `\notation[times]{mult}{#1 \comp{\times} #2}` allows us to write  $\mult[cdot]{a}{b}$  and  $\mult[times]{a}{b}$ :

### Example 2

```
\notation[cdot]{mult}{#1 \comp{\cdot} #2}
\notation[times]{mult}{#1 \comp{\times} #2}
 $\mult[cdot]{a}{b}$  and  $\mult[times]{a}{b}$ 
```

$a \cdot b$  and  $a \times b$

.

Not using an explicit option with a semantic macro yields the first declared notation, unless changed<sup>1</sup>.

Outside of math mode, or by using the starred variant `\foo*`, allows to provide a custom notation, where notational (or textual) components can be given explicitly in square brackets.

### Example 3

```
 $\mult*{a}[\comp{\ast}]{b}$  is the
\mult[\comp{product of}][ $\$a$ ][\comp{and}][ $\$b$ ]
```

$a * b$  is the product of  $a$  and  $b$

.

In custom mode, prefixing an argument with a star will not print that argument, but still export it to OMDoc:

### Example 4

```
\mult[\comp{Multiplying}]* $\mult{a}{b}$ [ again by  $\$b$  yields ...
```

Multiplying again by  $b$  yields...

The syntax `*[int]` allows switching the order of arguments. For example, given a 2-ary semantic macro `\forevery` with exemplary notation `\forall #1. #2`, we can write

### Example 5

```
\symdecl[ args=2]{forevery}
\forevery* [2]{The proposition  $\$P$ [\comp{holds for every}]*[1]{ $\$x$  in  $A$ }}
```

The proposition  $P$  holds for every  $x \in A$

<sup>1</sup>EdNOTE: TODO

When using `*[n]`, after reading the provided ( $n$ th) argument, the “argument counter” automatically continues where we left off, so the `*[1]` in the above example can be omitted.

For a macro with `arity > 0`, we can refer to the operator *itself* semantically by suffixing the semantic macro with an exclamation point `!` in either text or math mode. For that reason `\notation` (and thus `\symdef`) take an additional optional argument `op=`, which allows to assign a notation for the operator itself. e.g.

### Example 6

```
\symdef[ args=2,op={+}]{add}{#1 \comp+ #2}
The operator  $\textcolor{teal}{\$}\textcolor{teal}{add}\textcolor{teal}{\$}$  adds two elements, as in  $\textcolor{teal}{\$}\textcolor{teal}{add}\textcolor{teal}{ab}\textcolor{teal}{\$}$ .
```

The operator  $+$  adds two elements, as in  $a+b$ .

`*` is composable with `!` for custom notations, as in:

### Example 7

```
\mult![\comp{Multiplication}] (denoted by  $\textcolor{teal}{\$}\textcolor{teal}{mult}\textcolor{teal}{*}\textcolor{teal}{!}\textcolor{teal}{[\comp{cdot}]\textcolor{teal}{\$}}$  is defined by...
```

$\textcolor{teal}{Multiplication}$  (denoted by  $\cdot$ ) is defined by...

The macro `\comp` as used everywhere above is responsible for highlighting, linking, and tooltips, and should be wrapped around the notation (or text) components that should be treated accordingly. While it is attractive to just wrap a whole notation, this would also wrap around e.g. the arguments themselves, so instead, the user is tasked with marking the notation components themselves.

The precise behaviour of `\comp` is governed by the macro `\@comp`, which takes two arguments: The tex code of the text (unexpanded) to highlight, and the URI of the current symbol. `\@comp` can be safely redefined to customize the behaviour.

The starred variant `\symdecl*{foo}` does not introduce a semantic macro, but still declares a corresponding symbol. `foo` (like any other symbol, for that matter) can then be accessed via `\STEXsymbol{foo}` or (if `foo` was declared in a module `Foo`) via `\STEXModule{Foo}?{foo}`.

both `\STEXsymbol` and `\STEXModule` take any arbitrary ending segment of a full URI to determine which symbol or module is meant. e.g. `\STEXsymbol{Foo?foo}` is also valid, as are e.g. `\STEXModule{path?Foo}?{foo}` or `\STEXsymbol{path?Foo?foo}`

There’s also a convient shortcut `\symref{?foo}{some text}` for `\STEXsymbol{?foo}![some text]`

## Other Argument Types

So far, we have stated the arity of a semantic macro directly. This works if we only have “normal” (or more precisely: *i*-type) arguments. To make use of other argument types, instead of providing the arity numerically, we can provide it as a sequence of characters

representing the argument types – e.g. instead of writing `args=2`, we can equivalently write `args=ii`, indicating that the macro takes two i-type arguments.

Besides i-type arguments,  $\text{\TeX}$  has two other types, which we will discuss now.

The first are *binding* (b-type) arguments, representing variables that are *bound* by the operator. This is the case for example in the above `\forevery`-macro: The first argument is not actually an argument that the `forevery` “function” is “applied” to; rather, the first argument is a new variable (e.g.  $x$ ) that is *bound* in the subsequent argument. More accurately, the macro should therefore have been implemented thusly:

```
\symdef[args=bi]{forevery}{\forall #1.\; #2}
```

b-type arguments are indistinguishable from i-type arguments within  $\text{\TeX}$ , but are treated very differently in OMDOC and by MMT. More interesting *within*  $\text{\TeX}$  are a-type arguments, which represent (associative) arguments of flexible arity, which are provided as comma-separated lists. This allows e.g. better representing the `\mult`-macro above:

### Example 8

```
\symdef[ args=a]{mult}{#1}{#1 \comp\cdot #2}
$\mult{a,b,c,{d^e},f}$
```

$$a \cdot b \cdot c \cdot d^e \cdot f$$

As the example above shows, notations get a little more complicated for associative arguments. For every a-type argument, the `\notation`-macro takes an additional argument that declares how individual entries in an a-type argument list are aggregated. The first notation argument then describes how the aggregated expression is combined into the full representation.

For a more interesting example, consider a flexary operator for ordered sequences in ordered set, that taking arguments  $\{a, b, c\}$  and `\mathbb{R}` prints  $a \leq b \leq c \in \mathbb{R}$ . This operator takes two arguments (an a-type argument and an i-type argument), aggregates the individuals of the associative argument using `\leq`, and combines the result with `\in` and the second argument thusly:

### Example 9

```
\symdef[ args=ai]{numseq}{#1 \comp\in #2}{#1 \comp\leq #2}
$numseq{a,b,c}{\mathbb{R}}$
```

$$a \leq b \leq c \in \mathbb{R}$$

Finally, B-type arguments combine the functionalities of a and b, i.e. they represent flexary binding operator arguments.

2 3

<sup>2</sup>EDNOTE: what about e.g. `\int \_x \int \_y \int \_z f dx dy dz`?

<sup>3</sup>EDNOTE: “decompose” a-type arguments into fixed-arity operators?

## Precedences

Every notation has an (upwards) *operator precedence* and for each argument a (downwards) *argument precedence* used for automated bracketing. For example, a notation for a binary operator `\foo` could be declared like this:

```
\notation[prec=200;500x600]{foo}{#1 \comp{+} #2}
```

assigning an operator precedence of 200, an argument precedence of 500 for the first argument, and an argument precedence of 600 for the second argument.

$\TeX$  insert brackets thusly: Upon encountering a semantic macro (such as `\foo`), its operator precedence (e.g. 200) is compared to the current downwards precedence (initially `\neginfprec`). If the operator precedence is *larger* than the current downwards precedence, parentheses are inserted around the semantic macro.

Notations for symbols of arity 0 have a default precedence of `\infprec`, i.e. by default, parentheses are never inserted around constants. Notations for symbols with arity  $> 0$  have a default operator precedence of 0. If no argument precedences are explicitly provided, then by default they are equal to the operator precedence.

Consequently, if some operator  $A$  should bind stronger than some operator  $B$ , then  $A$  as operator precedence should be smaller than  $B$ 's argument precedences.

For example:

### Example 10

```
\notation[prec=100]{plus}{#1 \comp{+} #2}
\notation[prec=50]{times}{#1 \comp{\cdot} #2}
 $\plus{a}{\times{b}{c}}$  and  $\times{a}{\plus{b}{c}}$ 
```

$a+b \cdot c$  and  $a \cdot (b+c)$

## 1.1.2 Archives and Imports

### Namespaces

Ideally,  $\TeX$  would use arbitrary URIs for modules, with no forced relationships between the *logical* namespace of a module and the *physical* location of the file declaring the module – like MMT does things.

Unfortunately,  $\TeX$  only provides very restricted access to the file system, so we are forced to generate namespaces systematically in such a way that they reflect the physical location of the associated files, so that  $\TeX$  can resolve them accordingly. Largely, users need not concern themselves with namespaces at all, but for completeness sake, we describe how they are constructed:

- If `\begin{module}{Foo}` occurs in a file `/path/to/file/Foo[.<lang>].tex` which does not belong to an archive, the namespace is `file://path/to/file`.
- If the same statement occurs in a file `/path/to/file/bar[.<lang>].tex`, the namespace is `file://path/to/file/bar`.

In other words: outside of archives, the namespace corresponds to the file URI with the filename dropped iff it is equal to the module name, and ignoring the (optional) language suffix<sup>1</sup>.

If the current file is in an archive, the procedure is the same except that the initial segment of the file path up to the archive's `source`-folder is replaced by the archive's namespace URI.

## Paths in Import-Statements

Conversely, here is how namespaces/URIs and file paths are computed in import statements, exemplary `\importmodule`:

- `\importmodule{Foo}` outside of an archive refers to module `Foo` in the current namespace. Consequently, `Foo` must have been declared earlier in the same document or, if not, in a file `Foo[.<lang>].tex` in the same directory.
- The same statement *within* an archive refers to either the module `Foo` declared earlier in the same document, or otherwise to the module `Foo` in the archive's top-level namespace. In the latter case, it has to be declared in a file `Foo[.<lang>].tex` directly in the archive's `source`-folder.
- Similarly, in `\importmodule{some/path?Foo}` the path `some/path` refers to either the sub-directory and relative namespace path of the current directory and namespace outside of an archive, or relative to the current archive's top-level namespace and `source`-folder, respectively.

The module `Foo` must either be declared in the file `<top-directory>/some/path/Foo[.<lang>].tex`, or in `<top-directory>/some/path[.<lang>].tex` (which are checked in that order).

- Similarly, `\importmodule[Some/Archive]{some/path?Foo}` is resolved like the previous cases, but relative to the archive `Some/Archive` in the mathhub-directory.
- Finally, `\importmodule{full://uri?Foo}` naturally refers to the module `Foo` in the namespace `full://uri`. Since the file this module is declared in can not be determined directly from the URI, the module must be in memory already, e.g. by being referenced earlier in the same document.

Since this is less compatible with a modular development, using full URIs directly is discouraged.

---

<sup>1</sup>which is internally attached to the module name instead, but a user need not worry about that.

## Part II

# Documentation

## Chapter 2

# sTeX-Basics

Both the sTeX package and class offer the following package options:

**debug** ( $\langle\log\text{-}prefix\rangle*$ ) Logs debugging information with the given prefixes to the terminal, or all if **all** is given.

**showmods** ( $\langle\text{boolean}\rangle$ ) Shows explicit module information at the document margins.

**lang** ( $\langle\text{language}\rangle*$ ) Languages to load with the **babel** package.

**mathhub** ( $\langle\text{directory}\rangle$ ) MathHub folder to search for repositories.

**sms** ( $\langle\text{boolean}\rangle$ ) use *persisted* mode (see ???).

**image** ( $\langle\text{boolean}\rangle$ ) passed on to tikzinput.

### 2.1 Macros and Environments

---

<code>\sTeX</code>	Both print this sTeX logo.
<code>\stex</code>	

---

---

<code>\stex_debug:nn</code>	<code>\stex_debug:nn {<math>\langle\log\text{-}prefix\rangle</math>} {<math>\langle\text{message}\rangle</math>}</code>
	Logs $\langle\text{message}\rangle$ , if the package option <b>debug</b> contains $\langle\log\text{-}prefix\rangle$ .

---

---

<code>\stex_add_to_sms:n</code>	Adds the provided code to the <code>.sms</code> -file of the document.
---------------------------------	--

---

---

<code>\if@latexml</code>	L <sup>A</sup> T <sub>E</sub> X2e and L <sup>A</sup> T <sub>E</sub> X3 conditionals for L <sup>A</sup> T <sub>E</sub> XML.
<code>\latexml_if_p:</code>	
<code>\latexml_if:T</code>	
<code>\latexml_if:F</code>	
<code>\latexml_if:TF</code>	

---

We have four macros for annotating generated HTML (via L<sup>A</sup>T<sub>E</sub>XML or S<sup>C</sup>A<sup>L</sup>L<sup>A</sup>T<sub>E</sub>X) with attributes:

---

<code>\stex_annotate:nnn</code>	<code>\stex_annotate:nnn {⟨property⟩} {⟨resource⟩} {⟨content⟩}</code>
<code>\stex_annotate_invisible:nnn</code>	
<code>\stex_annotate_invisible:n</code>	

---

Annotates the HTML generated by  $\langle content \rangle$  with

`property="stex:⟨property⟩", resource="⟨resource⟩".`

`\stex_annotate_invisible:n` adds the attributes

`stex:visible="false", style="display:none".`

`\stex_annotate_invisible:nnn` combines the functionality of both.

<code>stex_annotate_env</code>	<code>\begin{stex_annotate_env}{⟨property⟩}{⟨resource⟩}</code> $\langle content \rangle$ <code>\end{stex_annotate_env}</code> behaves like <code>\stex_annotate:nnn {⟨property⟩} {⟨resource⟩} {⟨content⟩}</code> .
--------------------------------	---

---

<code>\c_stex_languages_prop</code>
<code>\c_stex_language_abbrevs_prop</code>

---

Map language abbreviations to their full babel names and vice versa. e.g. `\c_stex_languages_prop{en}` yields `english`, and `\c_stex_language_abbrevs_prop{english}` yields `en`.

---

<code>\stex_deactivate_macro:Nn</code>	<code>\stex_deactivate_macro:Nn⟨cs⟩{⟨environments⟩}</code>
<code>\stex_reactivate_macro:N</code>	

---

Makes the macro  $\langle cs \rangle$  throw an error, indicating that it is only allowed in the context of  $\langle environments \rangle$ .

`\stex_reactivate_macro:N⟨cs⟩` reactivates it again, i.e. this happens ideally in the  $\langle begin \rangle$ -code of the associated environments.

---

<code>\MSC</code>	<code>\MSC{⟨msc⟩}</code>
-------------------	--------------------------

---

Designates the *math subject classifier* of the current module / file.

## Chapter 3

# STEX-MathHub

Code related to managing and using MathHub repositories, files, paths and related hooks and methods.

### 3.1 Macros and Environments

---

<code>\stex_kpsewhich:n</code>	<code>\stex_kpsewhich:n</code> executes <code>kpsewhich</code> and stores the return in <code>\l_stex_kpsewhich_return_str</code> . This does not require shell escaping.
--------------------------------	---

---

#### 3.1.1 Files, Paths, URIs

---

<code>\stex_path_from_string:Nn</code>	<code>\stex_path_from_string:Nn</code> $\langle path-variable \rangle$ $\{ \langle string \rangle \}$
<code>\stex_path_from_string:(NV cn cV)</code>	

---

turns the  $\langle string \rangle$  into a path by splitting it at `/`-characters and stores the result in  $\langle path-variable \rangle$ . Also applies `\stex_path_canonicalize:N`.

---

<code>\stex_path_to_string:NN</code>	The inverse; turns a path into a string and stores it in the second argument variable, or
<code>\stex_path_to_string:N</code>	leaves it in the input stream.

---

---

<code>\stex_path_canonicalize:N</code>	Canonicalizes the path provided; in particular, resolves <code>.</code> and <code>..</code> path segments.
--	--

---

---

<code>\stex_path_if_absolute_p:N</code>	$\star$
<code>\stex_path_if_absolute:N</code>	$\underline{TF}$ $\star$

---

Checks whether the path provided is *absolute*, i.e. starts with an empty segment

---

<code>\c_stex_pwd_seq</code>	Store the current working directory as path-sequence and string, respectively, and the (heuristically guessed) full path to the main file, based on the PWD and <code>\jobname</code> .
<code>\c_stex_pwd_str</code>	
<code>\c_stex_mainfile_seq</code>	
<code>\c_stex_mainfile_str</code>	

---

---

`\g_stex_currentfile_seq`

---

The file being currently processed (respecting `\input` etc.)

### Test 1

```
\ExplSyntaxOn

aaa/bbb/./ddd	aaa/bbb/ddd	aaa/bbb/ddd
./		
aaa/bbb/./..		

## 3.1.2 MathHub Archives

---

`\mathhub`

---

`\c_stex_mathhub_seq`

`\c_stex_mathhub_str`

---

We determine the path to the local MathHub folder via one of three means, in order of precedence:

1. The `mathhub` package option, or
2. the `\mathhub`-macro, if it has been defined before the `\usepackage{stex}`-statement, or
3. the `MATHHUB` system variable.

In all three cases, `\c_stex_mathhub_seq` and `\c_stex_mathhub_str` are set accordingly.

---

`\l_stex_current_repository_prop`

---

Always points to the *current* MathHub repository (if we currently are in one). Has the fields `id`, `ns` (namespace), `narr` (narrative namespace; currently not in use) and `deps` (dependencies; currently not in use).

<hr/> <hr/> <code>\stex_set_current_repository:n</code>	Sets the current repository to the one with the provided ID. calls <code>\__stex_mathhub_do_manifest:n</code> , so works whether this repository's MANIFEST.MF-file has already been read or not.
<hr/> <hr/> <code>\stex_require_repository:n</code>	Calls <code>\__stex_mathhub_do_manifest:n</code> iff the corresponding archive property list does not already exist, and adds a corresponding definition to the <code>.sms</code> -file.
<hr/> <hr/> <code>\stex_in_repository:nn</code>	<code>\stex_in_repository:nn{&lt;repository-name&gt;}{&lt;code&gt;}</code> Change the current repository to <code>{&lt;repository-name&gt;}</code> (or not, if <code>{&lt;repository-name&gt;}</code> is empty), and passes its ID on to <code>{&lt;code&gt;}</code> as #1. Switches back to the previous repository after executing <code>{&lt;code&gt;}</code> .
<hr/> <hr/> <code>\mhpath *</code>	<code>\mhpath{&lt;archive-ID&gt;}{&lt;filename&gt;}</code> Expands to the full path of file <code>&lt;filename&gt;</code> in repository <code>&lt;archive-ID&gt;</code> . Does not check whether the file or the repository exist.
<hr/> <hr/> <code>\inputref</code> <hr/> <code>\inputref:nn</code>	<code>\inputref[&lt;archive-ID&gt;]{&lt;filename&gt;}</code> <code>\inputs</code> the file <code>&lt;filename&gt;</code> in repository <code>&lt;archive-ID&gt;</code> .
<hr/> <hr/> <code>\libinput</code>	<code>\libinput{&lt;filename&gt;}</code> Inputs <code>&lt;filename&gt;.tex</code> from the <code>lib</code> folders in the current archive and the <code>meta-inf</code> -archive of the current archive group (if existent). Throws an error if no file by that name exists in either folder, includes both if both exist.

## Test 2

```

\ExplSyntaxOn
\stex_require_repository:n { Foo/Bar }
id:-\prop_item:cn {c_stex_mathhub_Foo/Bar_manifest_prop} {id}\ \
narr:-\prop_item:cn {c_stex_mathhub_Foo/Bar_manifest_prop} {narr}\ \

## Chapter 4

# sTeX-References

Code related to links and cross-references

### 4.1 Macros and Environments

# Chapter 5

## sTeX-Modules

Code related to Modules

### 5.1 Macros and Environments

---

`\l_stex_current_module_prop`

---

All information of a module is stored as a property list. `\l_stex_current_module_prop` always points to the current module (if existent).

Most importantly, the `content`-field stores all the code to execute on activation; i.e. when this module is being included.

Additionally, it stores:

- The *name* in field `name`,
- the *namespace* in field `ns`,
- this module's *language* in field `lang`,
- if a language module that translates some other modules, the *original* module in field `sig` (for signature),
- the *metatheory* in field `meta`,
- the URIs of all *imported modules* in field `imports`,
- the names of all *declarations* in field `constants`,
- the *file* this module was declared in in field `file`,

---

`\l_stex_all_modules_seq`

---

Stores full URIs for all modules currently in scope.

---

```
\g_stex_module_files_prop
\g_stex_modules_in_file_seq
```

---

A property list mapping file paths to the lists of all modules declared therein. `\g_stex_modules_in_file_seq` always points to the current file(-stream - `\inputs` are considered the same file).

---

```
\stex_if_in_module_p: * Conditional for whether we are currently in a module
\stex_if_in_module:TF *
```

---

---

```
\stex_if_module_exists_p:n *
\stex_if_module_exists:nTF *
```

---

Conditional for whether a module with the provided URI is already known.

---

```
\stex_add_to_current_module:n
\STEXexport
```

---

Adds the provided tokens to the `content` field of the current module.

---

```
\stex_add_constant_to_current_module:n
```

---

Adds the declaration with the provided name to the `constants` field of the current module.

---

```
\stex_add_import_to_current_module:n
```

---

Adds the module with the provided full URI to the `imports` field of the current module.

---

```
\stex_modules_compute_namespace:nN \stex_modules_compute_namespace:nN
{\<namespace>} {\<path>}
```

---

Computes the namespace for file `<path>` in repository with namespace `<namespace>` as follows:

If the file is `.../source/sub/file.tex` and the namespace `http://some.namespace/foo`, then the namespace of is `http://some.namespace/foo/sub/file`.

---

```
\stex_modules_current_namespace:
```

---

Computes the current namespace

### Test 3

```
\ExplSyntaxOn
\stex_modules_current_namespace:

```

.

### 5.1.1 The module-environment

`module`      `\begin{module}[\langle options \rangle]{\langle name \rangle}`  
 Opens a new module with name  $\langle name \rangle$ .  
 TODO document options.

---

`\stex_module_setup:nn`      `\stex_module_setup:nn{\langle params \rangle}{\langle name \rangle}`  
 Sets up a new module with name  $\langle name \rangle$  and optional parameters  $\langle params \rangle$ . In particular, sets `\l_stex_current_module_prop` appropriately.

---

`\stex_modules_heading:`      Takes care of the module header, if the `showmods` package option is true. This macro can be overridden for customization.

`@module`      `\begin{@module}[\langle options \rangle]{\langle name \rangle}`  
 Core functionality of the `module-environment` without a header.

### Test 4

\end{module}
\ExplSyntaxOff
```

```
Module 5.1.1[Bar] (FooBar)
Module path: http://mathhub.info/tests/Foo/Bar/Foo?Bar
Language:
Signature:
Metatheory:
```

---

`\STEXModule` `\STEXModule {⟨fragment⟩}`

---

Attempts to find a module whose URI ends with `⟨fragment⟩` in the current scope and passes the full URI on to `\stex_invoke_module:n`.

---

`\stex_invoke_module:n`

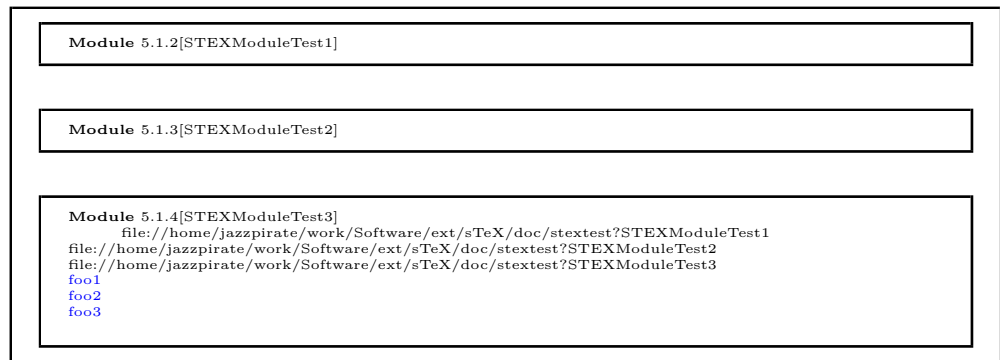

---

Invoked by `\STEXModule`. Needs to be followed either by `!⟨macro⟩` or `?{⟨symbolname⟩}`. In the first case, it stores the full URI in `⟨macro⟩`; in the second case, it invokes the symbol `⟨symbolname⟩` in the selected module.

## Test 6

```
\begin{module}{STEXModuleTest1}
\symdecl{foo}
\end{module}
\begin{module}{STEXModuleTest2}
\importmodule{STEXModuleTest1}
\symdecl{foo}
\end{module}
\begin{module}{STEXModuleTest3}
\importmodule{STEXModuleTest2}
\symdecl{foo}
\STEXModule{STEXModuleTest1}!\teststring
\teststring\
\STEXModule{STEXModuleTest2}!\teststring
\teststring\
\STEXModule{STEXModuleTest3}!\teststring
\teststring\
\STEXModule{STEXModuleTest1}?{foo}[\comp{foo1}]\
\STEXModule{STEXModuleTest2}?{foo}[\comp{foo2}]\
\STEXModule{STEXModuleTest3}?{foo}[\comp{foo3}]\
\end{module}
```

---

`\stex_activate_module:n`

---

Activate the module with the provided URI; i.e. executes all macro code of the module's `content`-field (does nothing if the module is already activated in the current context) and adds the module to `\l_stex_all_modules_seq`.

## Chapter 6

# STEX-Module Inheritance

Code related to Module Inheritance, in particular *sms mode*.

### 6.1 Macros and Environments

#### 6.1.1 SMS Mode

“SMS Mode” is used when loading modules from external tex files. It deactivates any output and ignores all T<sub>E</sub>X commands not explicitly allowed via the following lists:

---

`\g_stex_smsmode_allowedmacros_tl`

---

Macros that are executed as is; i.e. with the category code scheme used in SMS mode.

---

`\g_stex_smsmode_allowedmacros_escape_tl`

---

Macros that are executed with the category codes restored.

Importantly, these macros need to call `\stex_smsmode_set_codes:` after reading all arguments. Note, that `\stex_smsmode_set_codes:` takes care of checking whether we are in SMS mode in the first place, so calling this function eagerly is unproblematic.

---

`\g_stex_smsmode_allowedenvs_seq`

---

The names of environments that should be allowed in SMS mode. The corresponding `\begin`-statements are treated like the macros in `\g_stex_smsmode_allowedmacros_escape_tl`, so `\stex_smsmode_set_codes:` should be called at the end of the `\begin`-code. Since `\end`-statements take no arguments anyway, those are called with the SMS mode category code scheme active.

---

`\stex_if_smsmode_p: *`  
`\stex_if_smsmode:TF *`

---

Tests whether SMS mode is currently active.

---

`\stex_smsmode_set_codes:`

---

Sets the current category code scheme to that of the SMS mode, if SMS mode is currently active and if necessary.

This method should be called at the end of every macro or `\begin` environment code that are allowed in SMS mode.

---

`\stex_in_smsmode:nn`    `\stex_in_smsmode:nn {<name>} {<code>}`

---

Executes `<code>` in SMS mode. `<name>` can be arbitrary, but should be distinct, since it allows for nesting `\stex_in_smsmode:nn` without spuriously terminating SMS mode.

### Test 7

```
\immediate\openout\testfile=./tests/sometest.tex
\immediate\write\testfile{\detokenize{\this is \a test}^J}
\immediate\write\testfile{\detokenize{this \is a \test}}
\immediate\closeout\testfile
\ExplSyntaxOn
\stex_in_smsmode:nn { foo } {
  \input{tests/sometest.tex}
}
\ExplSyntaxOff
```

## 6.1.2 Imports and Inheritance

---

`\importmodule`    `\importmodule[<archive-ID>]{<module-path>}`

---

Imports a module by reading it from a file and “activating” it.  $\TeX$  determines the module and its containing file by passing its arguments on to `\stex_import_module_path:nn`.

### Test 8

```
\begin{module}{Foo}
\symdecl[name=foo, args=3]{bar}
\symdecl[ args=bai]{foobar}
Meaning:-\present\bar\
\end{module}
Meaning:-\present\bar\
\begin{module}{Importtest}
\importmodule{Foo}
Meaning:-\present\bar\
\end{module}
\begin{module}{Importtest2}
\importmodule{Importtest}
Meaning:-\present\bar\
\end{module}
```

**Module 6.1.1[Foo]**  
Meaning:  $\rightarrow$  `\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo?foo}<`

Meaning:  $\rightarrow$  `\protect \bar <`

**Module 6.1.2[Importtest]**  
Meaning:  $\rightarrow$  `\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo?foo}<`

**Module 6.1.3[Importtest2]**  
Meaning:  $\rightarrow$  `\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo?foo}<`

---

`\usemodule` `\importmodule[⟨archive-ID⟩]{⟨module-path⟩}`

---

Like `\importmodule`, but does not export its contents; i.e. including the current module will not activate the used module

### Test 9

```

\begin{module}{UseTest1}
\symdecl{foo}
\end{module}
\begin{module}{UseTest2}
\usemodule{UseTest1}
\symdecl{bar}
Meaning:~\present\foo\\
\end{module}
\begin{module}{UseTest3}
\importmodule{UseTest2}
Meaning:~\present\foo\\
Meaning:~\present\bar\\

All modules: \ExplSyntaxOn
\seq_use:Nn \l_stex_all_modules_seq {,~} \\
All~symbols:~
\seq_use:Nn \l_stex_all_symbols_seq {,~}
\ExplSyntaxOff
\end{module}

```

**Module 6.1.4[UseTest1]**

**Module 6.1.5[UseTest2]**  
Meaning: `>macro:->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest1?foo}<`

**Module 6.1.6[UseTest3]**  
Meaning: `>undefined<`  
Meaning: `>macro:->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest2?bar}<`

All modules: `http://mathhub.info/sTeX?Metatheory`, `file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest3`,  
`file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest2`  
All symbols: `http://mathhub.info/sTeX?Metatheory?isa`, `http://mathhub.info/sTeX?Metatheory?bind`, `http://mathhub.info/sTeX?Metatheory?fromto`, `http://mathhub.info/sTeX?Metatheory?apply`, `http://mathhub.info/sTeX?Metatheory?collec`,  
`http://mathhub.info/sTeX?Metatheory?seqtype`, `http://mathhub.info/sTeX?Metatheory?sequence-index`, `http://mathhub.info/sTeX?Metatheory?aseqfromto`, `http://mathhub.info/sTeX?Metatheory?aseqfromtovia`, `http://mathhub.info/sTeX?Metatheory?mathematical-structure`,  
`file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?UseTest2?bar`

### Test 10

```

Circular dependencies:
\begin{module}{CircDep1}
\importmodule[Foo/Bar]{circular1?Circular1}
\importmodule[Bar/Foo]{circular2?Circular2}
\present\fooA\\
\present\fooB\\
\end{module}

```

Circular dependencies:

**Module 6.1.7[CircDep1]**  
`>macro:->\stex_invoke_symbol:n {http://mathhub.info/tests/Foo/Bar/circular1?Circular1?fooA}<`  
`>macro:->\stex_invoke_symbol:n {http://mathhub.info/tests/Bar/Foo//circular2?Circular2?fooB}<`

---

---

`\stex_import_module_uri:nn`

`\stex_import_module_uri:nn {<archive-ID>} {<module-path>}`

Determines the URI of a module by splitting `<module-path>` into `<path>?<name>`. If `<module-path>` does *not* contain a `?`-character, we consider it to be the `<name>`, and `<path>` to be empty.

If `<archive-ID>` is empty, it is automatically set to the ID of the current archive (if one exists).

1. If `<archive-ID>` is empty:

(a) If `<path>` is empty, then `<name>` must have been declared earlier in the same file and retrievable from `\g_stex_modules_in_file_seq`, or a file with name `<name>.<lang>.tex` must exist in the same folder, containing a module `<name>`. That module should have the same namespace as the current one.

(b) If `<path>` is not empty, it must point to the relative path of the containing file as well as the namespace.

2. Otherwise:

(a) If `<path>` is empty, then `<name>` must have been declared earlier in the same file and retrievable from `\g_stex_modules_in_file_seq`, or a file with name `<name>.<lang>.tex` must exist in the top `source` folder of the archive, containing a module `<name>`.

That module should lie directly in the namespace of the archive.

(b) If `<path>` is not empty, it must point to the path of the containing file as well as the namespace, relative to the namespace of the archive.

If a module by that namespace exists, it is returned. Otherwise, we call `\stex_require_module:nn` on the `source` directory of the archive to find the file.

---

---

`\stex_import_require_module:nnnn`

`{<ns>} {<archive-ID>} {<path>} {<name>}`

Checks whether a module with URI `<ns>?<name>` already exists. If not, it looks for a plausible file that declares a module with that URI.

Finally, activates that module by executing its `content`-field.

# Chapter 7

## STEX-Symbols

Code related to symbol declarations and notations

### 7.1 Macros and Environments

---

<u><code>\symdecl</code></u>	<code>\symdecl[⟨args⟩]{⟨macroname⟩}</code>
------------------------------	--

Declares a new symbol with semantic macro `\macroname`. Optional arguments are:

- **name**: An (OMDOC) name. By default equal to `⟨macroname⟩`.
- **type**: An (ideally semantic) term. Not used by STEX, but passed on to MMT for semantic services.
- **local**: A boolean (by default false). If set, this declaration will not be added to the module content, i.e. importing the current module will not make this declaration available.
- **args**: Specifies the “signature” of the semantic macro. Can be either an integer  $0 \leq n \leq 9$ , or a (more precise) sequence of the following characters:
  - i a “normal” argument, e.g. `\symdecl[args=ii]{plus}` allows for `\plus{2}{2}`.
  - a an *associative* argument; i.e. a sequence of arbitrarily many arguments provided as a comma-separated list, e.g. `\symdecl[args=a]{plus}` allows for `\plus{2,2,2}`.
  - b a *variable* argument. Is treated by STEX like an i-argument, but an application is turned into an OMBind in OMDoc, binding the provided variable in the subsequent arguments of the operator; e.g. `\symdecl[args=bi]{forall}` allows for `\forall{x\in\Nat}{x\geq0}`.

---

---

`\stex_symdecl_do:n`

Implements the core functionality of `\symdecl`, and is called by `\symdecl` and `\symdef`.

Ultimately stores the symbol  $\langle URI \rangle$  in the property list `\g_stex_symdecl_⟨URI⟩_prop` with fields:

- `name` (string),
- `module` (string),
- `notations` (sequence of strings; initially empty),
- `local` (boolean),
- `type` (token list),
- `args` (string of `is`, `as` and `bs`),
- `arity` (integer string),
- `assocs` (integer string; number of associative arguments),

### Test 11

```
\begin{module}{SymdeclTest}
\symdecl[name=foo, args=3]{bar}
\symdecl[name=foobar, args=iab]{bari}
\symdecl[def=\bar* abc]{bardef}
\ExplSyntaxOn
Meaning:~\present\bar\\
\stex_get_symbol:n { bar }
Result:~\l_stex_get_symbol_uri_str\\
Meaning:~\present\bardef\\
\ExplSyntaxOff
\end{module}
```

```
Module 7.1.1[SymdeclTest]
Meaning: >macro:->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?foo}<
Result: file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?foo
Meaning: >macro:->\stex_invoke_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?bardef}<
```

---

---

`\l_stex_all_symbols_seq`

Stores full URIs for all modules currently in scope.

---

---

`\stex_get_symbol:n`

Computes the full URI of a symbol from a macro argument, e.g. the macro name, the macro itself, the full URI...

---

---

`\notation`

`\notation[⟨args⟩]{⟨symbol⟩}{⟨notations+⟩}`

Introduces a new notation for  $\langle symbol \rangle$ , see `\stex_notation_do:nn`

---

`\stex_notation_do:nn` `\stex_notation_do:nn{<URI>}{<notations+>}`

---

Implements the core functionality of `\notation`, and is called by `\notation` and `\symdef`.

Ultimately stores the notation in the property list `\g_stex_notation_<URI>#<variant>#<lang>_prop` with fields:

- symbol (URI string),
- language (string),
- variant (string),
- opprec (integer string),
- argprecs (sequence of integer strings)

### Test 12

```
\begin{module}{NotationTest}
\importmodule{Foo}
\notation{foo, prec=500;20x20x20}{bar}{\comp\langle {#1} ^ {#2} _ {#3} \comp\rangle }
\notation{foo, prec=500;20x20x20}{foobar}{\comp\langle #1 \comp\mid [ #2 ] ^ {#3} \comp\rangle }{ {#1}_\comp{#2}}
\end{module}
```

Module 7.1.2[NotationTest]

---

`\symdef` `\symdef[<args>]{<symbol>}{<notations+>}`

---

Combines `\symdecl` and `\notation` by introducing a new symbol and assigning a new notation for it.

### Test 13

```
\begin{module}{SymdefTest}
\symdef[ args=a, prec=50]{plus}{ #1 }{#1 \comp+ #2}
$\plus{a,b,c}$
\end{module}
```

Module 7.1.3[SymdefTest]  
 $a+b+c$

# Chapter 8

## STEX-Terms

Code related to symbolic expressions, typesetting notations, notation components, etc.

### 8.1 Macros and Environments

<hr/> <hr/> <code>\STEXsymbol</code>	Uses <code>\stex_get_symbol:n</code> to find the symbol denoted by the first argument and passes the result on to <code>\stex_invoke_symbol:n</code>
<hr/> <hr/> <code>\symref</code>	<code>\symref{&lt;symbol&gt;}{&lt;text&gt;}</code> shortcut for <code>\STEXsymbol{&lt;symbol&gt;}! [ &lt;text&gt; ]</code>
<hr/> <hr/> <code>\stex_invoke_symbol:n</code>	Executes a semantic macro. Outside of math mode or if followed by <code>*</code> , it continues to <code>\stex_term_custom:nn</code> . In math mode, it uses the default or optionally provided notation of the associated symbol. If followed by <code>!</code> , it will invoke the symbol <i>itself</i> rather than its application (and continue to <code>\stex_term_custom:nn</code> ), i.e. it allows to refer to <code>\plus!</code> [addition] as an operation, rather than <code>\plus[addition of]{some}{terms}</code> .
<hr/> <hr/> <code>\_stex_term_math_oms:nnnn</code> <code>\_stex_term_math_oma:nnnn</code> <code>\_stex_term_math_omb:nnnn</code>	<code>&lt;URI&gt;&lt;fragment&gt;&lt;precedence&gt;&lt;body&gt;</code> Annotates <code>&lt;body&gt;</code> as an OMDOC-term (OMID, OMA or OMBIND, respectively) with head symbol <code>&lt;URI&gt;</code> , generated by the specific notation <code>&lt;fragment&gt;</code> with (upwards) operator precedence <code>&lt;precedence&gt;</code> . Inserts parentheses according to the current downwards precedence and operator precedence.
<hr/> <hr/> <code>\_stex_term_math_arg:nnn</code>	<code>\stex_term_arg:nnn&lt;int&gt;&lt;prec&gt;&lt;body&gt;</code> Annotates <code>&lt;body&gt;</code> as the <code>&lt;int&gt;</code> th argument of the current OMA or OMBIND, with (downwards) argument precedence <code>&lt;prec&gt;</code> .
<hr/> <hr/> <code>\_stex_term_math_assoc_arg:nnnn</code>	<code>\stex_term_arg:nnn&lt;int&gt;&lt;prec&gt;&lt;notation&gt;&lt;body&gt;</code> Annotates <code>&lt;body&gt;</code> as the <code>&lt;int&gt;</code> th (associative) <i>sequence</i> argument (as comma-separated list of terms) of the current OMA or OMBIND, with (downwards) argument precedence <code>&lt;prec&gt;</code> and associative notation <code>&lt;notation&gt;</code> .

<hr/> <hr/>	<code>\infprec</code> <code>\neginfprec</code>	Maximal and minimal notation precedences.
<hr/> <hr/>	<code>\dobrackets</code>	<code>\dobrackets {⟨body⟩}</code>  Puts $\langle body \rangle$ in parentheses; scaled if in display mode unscaled otherwise. Uses the current $\text{\S I E X}$ brackets (by default ( and )), which can be changed temporarily using <code>\withbrackets</code> .
<hr/> <hr/>	<code>\withbrackets</code>	<code>\withbrackets ⟨left⟩ ⟨right⟩ {⟨body⟩}</code>  Temporarily (i.e. within $\langle body \rangle$ ) sets the brackets used by $\text{\S I E X}$ for automated bracketing (by default ( and )) to $\langle left \rangle$ and $\langle right \rangle$ . Note that $\langle left \rangle$ and $\langle right \rangle$ need to be allowed after <code>\left</code> and <code>\right</code> in display-mode.

#### Test 14

```

\begin{module}{MathTest1}
\importmodule{Foo}
\notation[foo, prec=500;20x20x20]{bar}{\comp\langle {#1} ^ {#2} _{#3} \comp\rangle }
$\bar{abc}$ and $\bar{foo} abc$.
\end{module}

```

Module 8.1.1[MathTest1]  
 $\langle a^b c \rangle$  and  $\langle a^b c \rangle$ .

#### Test 15

```

\begin{module}{MathTest2}
\importmodule{Foo}
\notation[foo, prec=500;20x20x20]{foobar}{\comp\langle #1 \comp\mid [ #2 ] ^{#3} \comp\rangle }{ {#1}_{\comp} }
$\foobar{a\{b,c,d,e,f\}g}$ and $\foobar[foo]{a\{b,c\}g}$ and $\foobar{abc}$

\symdecl[ args=a]{ plus }
\symdecl[ args=a]{ mult }
\notation[prec=50]{ plus }{#1}{#1 \comp+ #2}
\notation[prec=100]{ mult }{#1}{#1 \comp\cdot #2}
$\plus{a,\mult{b,c}}$ and $\mult{a,\plus{\frac{ab}{c}}}$
$[\plus{a,\mult{b,c}}]\text{ and }[\mult{a,\plus{\frac{ab}{c}}}]$
$\displaystyle \plus{a,\mult{b,c}}$ and
\withbrackets[]{$\displaystyle
\mult{a,\plus{\frac{ab}{c}}}$}
\end{module}

```

Module 8.1.2[MathTest2]  
 $\langle a|[b;c,d,e,f]^g \rangle$  and  $\langle a|[b;c]^g \rangle$  and  $\langle a|[b]^c \rangle$   
 $a+(b\cdot c)$  and  $a\cdot\frac{a}{b}+\frac{a}{c}$   
 $a+(b\cdot c)$  and  $a\cdot\frac{a}{b}+\frac{a}{c}$

---

---

`\stex_term_custom:nn`

`\stex_term_custom:nn{<URI>}{<args>}`

Implements custom one-time notation. Invoked by `\stex_invoke_symbol:n` in text mode, or if followed by `*` in math mode, or whenever followed by `!`.

### Test 16

```
\begin{module}{TextTest}
\importmodule{Foo}

\bar[some ]a[ and some ]b[ and also some ]c[ here].

$\bar*[\text{some }]a[\text{ and some }]b[\text{ and also some }]c[\text{ here}]\$.

$\bar![\mathtt{bar}]$

\bar*{a}*{b}[or just some ]c

\bar![bar]

\bar[or first ]*[2]{b}[ , then ]*[3]{c}[ , and finally ]a

\end{module}
```

```
Module 8.1.3[TextTest]
  some a and some b and also some c here.
  some a and some b and also some c here.

  or just some c
  bar
  or first b, then c, and finally a
```

---

---

`\stex_highlight_term:nn`

`\stex_highlight_term:nn{<URI>}{<args>}`

Establishes a context for `\comp`. Stores the URI in a variable so that `\comp` knows which symbol governs the current notation.

---

`\comp`

`\comp{<args>}`

`\compemph`

`\compemph@uri`

`\defemph`

`\defemph@uri`

`\symrefemph`

`\symrefemph@uri`

---

Marks `<args>` as a notation component of the current symbol for highlighting, linking, etc.

The precise behavior is governed by `\@comp`, which takes as additional argument the URI of the current symbol. By default, `\@comp` adds the URI as a PDF tooltip and colors the highlighted part in blue.

`\@defemph` behaves like `\@comp`, and can be similarly redefined, but marks an expression as *definiendum* (used by `\definiendum`)

---

`\STEXinvisible`

---

Exports its argument as OMDOC (invisible), but does not produce PDF output. Useful e.g. for semantic macros that take arguments that are not part of the symbolic notation.

---

`\ellipses`

---

# sTeX-Proofs: Structural Markup for Proofs

The `sproof` package is part of the sTeX collection, a version of T<sub>E</sub>X/L<sup>A</sup>T<sub>E</sub>X that allows to markup T<sub>E</sub>X/L<sup>A</sup>T<sub>E</sub>X documents semantically without leaving the document format, essentially turning T<sub>E</sub>X/L<sup>A</sup>T<sub>E</sub>X into a document format for mathematical knowledge management (MKM).

This package supplies macros and environment that allow to annotate the structure of mathematical proofs in sTeX files. This structure can be used by MKM systems for added-value services, either directly from the sTeX sources, or after translation.

## Contents

## 11.1 Introduction

The **sproof** (semantic proofs) package supplies macros and environment that allow to annotate the structure of mathematical proofs in  $\text{\LaTeX}$  files. This structure can be used by MKM systems for added-value services, either directly from the  $\text{\LaTeX}$  sources, or after translation. Even though it is part of the  $\text{\LaTeX}$  collection, it can be used independently, like it's sister package **statements**.

$\text{\LaTeX}$  is a version of  $\text{\TeX}/\text{\LaTeX}$  that allows to markup  $\text{\TeX}/\text{\LaTeX}$  documents semantically without leaving the document format, essentially turning  $\text{\TeX}/\text{\LaTeX}$  into a document format for mathematical knowledge management (MKM).

```
\begin{sproof}[id=simple-proof,for=sum-over-odds]
  {We prove that  $\sum_{i=1}^n (2i-1) = n^2$  by induction over  $n$ }
  \begin{spfcase}{For the induction we have to consider the following cases:}
    \begin{spfcase}{ $n=1$ }
      \begin{spfstep}[display=flow] then we compute  $1=1^2$ \end{spfstep}
    \end{spfcase}
    \begin{spfcase}{ $n=2$ }
      \begin{sproofcomment}[display=flow]
        This case is not really necessary, but we do it for the
        fun of it (and to get more intuition).
      \end{sproofcomment}
      \begin{spfstep}[display=flow] We compute  $1+3=2^2=4$ .\end{spfstep}
    \end{spfcase}
    \begin{spfcase}{ $n>1$ }
      \begin{spfstep}[type=assumption,id=ind-hyp]
        Now, we assume that the assertion is true for a certain  $k \geq 1$ ,
        i.e.  $\sum_{i=1}^k (2i-1) = k^2$ $.
      \end{spfstep}
      \begin{sproofcomment}
        We have to show that we can derive the assertion for  $n=k+1$  from
        this assumption, i.e.  $\sum_{i=1}^{k+1} (2i-1) = (k+1)^2$ $.
      \end{sproofcomment}
      \begin{spfstep}
        We obtain  $\sum_{i=1}^{k+1} (2i-1) = \sum_{i=1}^k (2i-1) + 2(k+1) - 1$ 
        \begin{justification}[method=arith:split-sum]
          by splitting the sum.
        \end{justification}
      \end{spfstep}
      \begin{spfstep}
        Thus we have  $\sum_{i=1}^{k+1} (2i-1) = k^2 + 2k + 1$ 
        \begin{justification}[method=fertilize]
          by inductive hypothesis.
        \end{justification}
      \end{spfstep}
      \begin{spfstep}[type=conclusion]
        We can \begin{justification}[method=simplify]simplify\end{justification}
        the right-hand side to  $(k+1)^2$ , which proves the assertion.
      \end{spfstep}
    \end{spfcase}
    \begin{spfstep}[type=conclusion]
      We have considered all the cases, so we have proven the assertion.
    \end{spfstep}
  \end{spfcase}
\end{sproof}
```

Example 1: A very explicit proof, marked up semantically

We will go over the general intuition by way of our running example (see Figure 1 for the source and Figure 2 for the formatted result).<sup>4</sup>

<sup>4</sup>EdNOTE: talk a bit more about proofs and their structure,... maybe copy from OMDoc spec.

## 11.2 The User Interface

### 11.2.1 Package Options

`showmeta` The `sproof` package takes a single option: `showmeta`. If this is set, then the metadata keys are shown (see [Kohlhase:metakeys] for details and customization options).

### 11.2.2 Proofs and Proof steps

`sproof` The `proof` environment is the main container for proofs. It takes an optional `KeyVal` argument that allows to specify the `id` (identifier) and `for` (for which assertion is this a proof) keys. The regular argument of the `proof` environment contains an introductory comment, that may be used to announce the proof style. The `proof` environment contains a sequence of `\step`, `proofcomment`, and `pfcases` environments that are used to markup the proof steps. The `proof` environment has a variant `Proof`, which does not use the proof end marker. This is convenient, if a proof ends in a case distinction, which brings it's own proof end marker with it. The `Proof` environment is a variant of `proof` that does not mark the end of a proof with a little box; presumably, since one of the subproofs already has one and then a box supplied by the outer proof would generate an otherwise empty line. The `\spfidea` macro allows to give a one-paragraph description of the proof idea.

`spfsketch` For one-line proof sketches, we use the `\spfsketch` macro, which takes the `KeyVal` argument as `sproof` and another one: a natural language text that sketches the proof.

`spfstep` Regular proof steps are marked up with the `step` environment, which takes an optional `KeyVal` argument for annotations. A proof step usually contains a local assertion (the text of the step) together with some kind of evidence that this can be derived from already established assertions.

Note that both `\premise` and `\justarg` can be used with an empty second argument to mark up premises and arguments that are not explicitly mentioned in the text.

### 11.2.3 Justifications

`justification` This evidence is marked up with the `justification` environment in the `sproof` package. This environment totally invisible to the formatted result; it wraps the text in the proof step that corresponds to the evidence. The environment takes an optional `KeyVal` argument, which can have the `method` key, whose value is the name of a proof method (this will only need to mean something to the application that consumes the semantic annotations). Furthermore, the justification can contain “premises” (specifications to assertions that were used justify the step) and “arguments” (other information taken into account by the proof method).

`\premise` The `\premise` macro allows to mark up part of the text as reference to an assertion that is used in the argumentation. In the example in Figure 1 we have used the `\premise` macro to identify the inductive hypothesis.

`\justarg` The `\justarg` macro is very similar to `\premise` with the difference that it is used to mark up arguments to the proof method. Therefore the content of the first argument is interpreted as a mathematical object rather than as an identifier as in the case of `\premise`. In our example, we specified that the simplification should take place on the right hand side of the equation. Other examples include proof methods that instantiate. Here we would indicate the substituted object in a `\justarg` macro.

<b>Proof:</b>	We prove that $\sum_{i=1}^n 2i - 1 = n^2$ by induction over $n$	
<b>P.1</b>	For the induction we have to consider the following cases:	
<b>P.1.1</b>	$n = 1$ : then we compute $1 = 1^2$	□
<b>P.1.1</b>	$n = 2$ : This case is not really necessary, but we do it for the fun of it (and to get more intuition). We compute $1 + 3 = 2^2 = 4$	□
<b>P.1.1</b>	$n > 1$ :	
<b>P.1.1.1</b>	Now, we assume that the assertion is true for a certain $k \geq 1$ , i.e. $\sum_{i=1}^k (2i - 1) = k^2$ .	
<b>P.1.1.1</b>	We have to show that we can derive the assertion for $n = k + 1$ from this assumption, i.e. $\sum_{i=1}^{k+1} (2i - 1) = (k + 1)^2$ .	
<b>P.1.1.1</b>	We obtain $\sum_{i=1}^{k+1} (2i - 1) = \sum_{i=1}^k (2i - 1) + 2(k + 1) - 1$ by splitting the sum	
<b>P.1.1.1</b>	Thus we have $\sum_{i=1}^{k+1} (2i - 1) = k^2 + 2k + 1$ by inductive hypothesis.	
<b>P.1.1.1</b>	We can simplify the right-hand side to $(k + 1)^2$ , which proves the assertion.	□
<b>P.1.1</b>	We have considered all the cases, so we have proven the assertion.	□

Example 2: The formatted result of the proof in Figure 1

#### 11.2.4 Proof Structure

<b>subproof</b>	The <b>pfcases</b> environment is used to mark up a subproof. This environment takes an optional <b>KeyVal</b> argument for semantic annotations and a second argument that allows to specify an introductory comment (just like in the <b>proof</b> environment). The <b>method</b> key can be used to give the name of the proof method executed to make this subproof.
<b>spfcases</b>	The <b>pfcases</b> environment is used to mark up a proof by cases. Technically it is a variant of the <b>subproof</b> where the <b>method</b> is <b>by-cases</b> . Its contents are <b>spfcases</b> environments that mark up the cases one by one.
<b>spfcases</b>	The content of a <b>pfcases</b> environment are a sequence of case proofs marked up in the <b>pfcases</b> environment, which takes an optional <b>KeyVal</b> argument for semantic annotations. The second argument is used to specify the the description of the case under consideration. The content of a <b>pfcases</b> environment is the same as that of a <b>proof</b> , i.e. <b>steps</b> , <b>proofcomments</b> , and <b>pfcases</b> environments. <b>\spfcasesketch</b> is a variant of the <b>spfcases</b> environment that takes the same arguments, but instead of the <b>spfsteps</b> in the body uses a third argument for a proof sketch.
<b>\spfcasesketch</b>	
<b>sproofcomment</b>	The <b>proofcomment</b> environment is much like a <b>step</b> , only that it does not have an object-level assertion of its own. Rather than asserting some fact that is relevant for the proof, it is used to explain where the proof is going, what we are attempting to to, or what we have achieved so far. As such, it cannot be the target of a <b>\premise</b> .

1. The numbering scheme of proofs cannot be changed. It is more geared for teaching proof structures (the author's main use case) and not for writing papers. reported by Tobias Pfeiffer (fixed)
2. currently proof steps are formatted by the `LATEX description` environment. We would like to configure this, e.g. to use the `inparaenum` environment for more condensed proofs. I am just not sure what the best user interface would be I can imagine redefining an internal environment `spf@proofstep@list` or adding a key `prooflistenv` to the `proof` environment that allows to specify the environment directly. Maybe we should do both.

## Chapter 12

# sTeX-Metatheory

The default meta theory for an sTeX module. Contains symbols so ubiquitous, that it is virtually impossible to describe any flexiformal content without them, or that are required to annotate even the most primitive symbols with meaningful (foundation-independent) “type”-annotations, or required for basic structuring principles (theorems, definitions).

Foundations should ideally instantiate these symbols with their formal counterparts, e.g. `isa` corresponds to a typing operation in typed setting, or the  $\in$ -operator in set-theoretic contexts; `bind` corresponds to a universal quantifier in ( $n$ th-order) logic, or a  $\Pi$  in dependent type theories.

## Chapter 14

# document-structure.sty: Semantic Markup for Open Mathematical Documents in L<sup>A</sup>T<sub>E</sub>X

The `omdoc` package is part of the  $\text{\texttt{sTeX}}$  collection, a version of  $\text{\texttt{TeX/LaTeX}}$  that allows to markup  $\text{\texttt{TeX/LaTeX}}$  documents semantically without leaving the document format, essentially turning  $\text{\texttt{TeX/LaTeX}}$  into a document format for mathematical knowledge management (MKM).

This package supplies an infrastructure for writing OMDOC documents in  $\text{\texttt{LaTeX}}$ . This includes a simple structure sharing mechanism for  $\text{\texttt{sTeX}}$  that allows to move from a copy-and-paste document development model to a copy-and-reference model, which conserves space and simplifies document management. The augmented structure can be used by MKM systems for added-value services, either directly from the  $\text{\texttt{sTeX}}$  sources, or after translation.

### 14.1 Introduction

$\text{\texttt{sTeX}}$  is a version of  $\text{\texttt{TeX/LaTeX}}$  that allows to markup  $\text{\texttt{TeX/LaTeX}}$  documents semantically without leaving the document format, essentially turning  $\text{\texttt{TeX/LaTeX}}$  into a document format for mathematical knowledge management (MKM). The package supports direct translation to the OMDOC format [Koh06]

The `omdoc` package supplies macros and environments that allow to label document fragments and to reference them later in the same document or in other documents. In essence, this enhances the document-as-trees model to documents-as-directed-acyclic-graphs (DAG) model. This structure can be used by MKM systems for added-value services, either directly from the  $\text{\texttt{sTeX}}$  sources, or after translation. Currently, trans-document referencing provided by this package can only be used in the  $\text{\texttt{sTeX}}$  collection.

DAG models of documents allow to replace the “Copy and Paste” in the source document with a label-and-reference model where document are shared in the document

source and the formatter does the copying during document formatting/presentation.<sup>6</sup>

## 14.2 The User Interface

The `omdoc` package generates two files: `omdoc.cls`, and `omdoc.sty`. The `OMDOC` class is a minimally changed variant of the standard `article` class that includes the functionality provided by `omdoc.sty`. The rest of the documentation pertains to the functionality introduced by `omdoc.sty`.

### 14.2.1 Package and Class Options

The `omdoc` class accept the following options:

<code>class=&lt;name&gt;</code>	load <code>&lt;name&gt;.cls</code> instead of <code>article.cls</code>
<code>topsect=&lt;sect&gt;</code>	The top-level sectioning level; the default for <code>&lt;sect&gt;</code> is <code>section</code>
<code>showignores</code>	show the the contents of the <code>ignore</code> environment after all
<code>showmeta</code>	show the metadata; see <code>metakeys.sty</code>
<code>showmods</code>	show modules; see <code>modules.sty</code>
<code>extrefs</code>	allow external references; see <code>sref.sty</code>
<code>defindex</code>	index definienda; see <code>statements.sty</code>
<code>minimal</code>	for testing; do not load any $\text{\LaTeX}$ packages

The `omdoc` package accepts the same except the first two.

### 14.2.2 Document Structure

`document` The top-level `document` environment can be given key/value information by the `\documentkeys` macro in the preamble<sup>2</sup>. This can be used to give metadata about the document. For the moment only the `id` key is used to give an identifier to the `omdoc` element resulting from the  $\text{\LaTeX}$ ML transformation.

`omgroup` The structure of the document is given by the `omgroup` environment just like in `OMDOC`. In the  $\text{\LaTeX}$  route, the `omgroup` environment is flexibly mapped to sectioning commands, inducing the proper sectioning level from the nesting of `omgroup` environments. Correspondingly, the `omgroup` environment takes an optional key/value argument for metadata followed by a regular argument for the (section) title of the `omgroup`. The optional metadata argument has the keys `id` for an identifier, `creators` and `contributors` for the Dublin Core metadata [DCM03]; see [Koh20a] for details of the format. The `short` allows to give a short title for the generated section. If the title contains semantic macros, they need to be protected by `\protect`, and we need to give the `loadmodules` key it needs no value. For instance we would have

```
\begin{module}{foo}
\symdef{bar}{B^a_r}
...
\begin{omgroup}[id=sec.barderv,loadmodules]{Introducing $\protect\bar$ Derivations}
```

$\text{\LaTeX}$  automatically computes the sectioning level, from the nesting of `omgroup` environments. But sometimes, we want to skip levels (e.g. to use a subsection\* as an introduction for a chapter). Therefore the `omdoc` package provides a variant `blindomgroup`

<sup>6</sup>EDNOTE: integrate with `latexml`'s `XMRef` in the `Math` mode.

<sup>2</sup>We cannot patch the document environment to accept an optional argument, since other packages we load already do; pity.

that does not produce markup, but increments the sectioning level and logically groups document parts that belong together, but where traditional document markup relies on convention rather than explicit markup. The `blindomgroup` environment is useful e.g. for creating frontmatter at the correct level. Example 3 shows a typical setup for the outer document structure of a book with parts and chapters. We use two levels of `blindomgroup`:

- The outer one groups the introductory parts of the book (which we assume to have a sectioning hierarchy topping at the part level). This `blindomgroup` makes sure that the introductory remarks become a “chapter” instead of a “part”.
- The inner one groups the frontmatter<sup>3</sup> and makes the preface of the book a section-level construct. Note that here the `display=flow` on the `omgroup` environment prevents numbering as is traditional for prefaces.

```
\begin{document}
\begin{blindomgroup}
\begin{blindomgroup}
\begin{frontmatter}
\maketitle\newpage
\begin{omgroup}[display=flow]{Preface}
... <<preface>> ...
\end{omgroup}
\clearpage\setcounter{tocdepth}{4}\tableofcontents\clearpage
\end{frontmatter}
\end{blindomgroup}
... <<introductory remarks>> ...
\end{blindomgroup}
\begin{omgroup}{Introduction}
... <<intro>> ...
\end{omgroup}
... <<more chapters>> ...
\bibliographystyle{alpha}\bibliography{kwarc}
\end{document}
```

Example 3: A typical Document Structure of a Book

`\skipomgroup`

The `\skipomgroup` “skips an `omgroup`”, i.e. it just steps the respective sectioning counter. This macro is useful, when we want to keep two documents in sync structurally, so that section numbers match up: Any section that is left out in one becomes a `\skipomgroup`.

`\currentsectionlevel`

`\CurrentSectionLevel`

The `\currentsectionlevel` macro supplies the name of the current sectioning level, e.g. “chapter”, or “subsection”. `\CurrentSectionLevel` is the capitalized variant. They are useful to write something like “In this `\currentsectionlevel`, we will...” in an `omgroup` environment, where we do not know which sectioning level we will end up.

### 14.2.3 Ignoring Inputs

`ignore`  
`showignores`

The `ignore` environment can be used for hiding text parts from the document structure. The body of the environment is not PDF or DVI output unless the `showignores` option

<sup>3</sup>We shied away from redefining the `frontmatter` to induce a `blindomgroup`, but this may be the “right” way to go in the future.

is given to the `omdoc` class or `package`. But in the generated OMDoc result, the body is marked up with a `ignore` element. This is useful in two situations. For

**editing** One may want to hide unfinished or obsolete parts of a document

**narrative/content markup** In  $\text{\LaTeX}$  we mark up narrative-structured documents. In the generated OMDoc documents we want to be able to cache content objects that are not directly visible. For instance in the `statements` package [Koh20d] we use the `\inlinedef` macro to mark up phrase-level definitions, which verbalize more formal definitions. The latter can be hidden by an `ignore` and referenced by the `verbalizes` key in `\inlinedef`.

For prematurely stopping the formatting of a document,  $\text{\LaTeX}$  provides the `\prematurestop` macro. It can be used everywhere in a document and ignores all input after that – backing out of the `omgroup` environment as needed. After that – and before the implicit `\end{document}` it calls the internal `\afterprematurestop`, which can be customized to do additional cleanup or e.g. print the bibliography.

`\prematurestop` is useful when one has a driver file, e.g. for a course taught multiple years and wants to generate course notes up to the current point in the lecture. Instead of commenting out the remaining parts, one can just move the `\prematurestop` macro. This is especially useful, if we need the rest of the file for processing, e.g. to generate a theory graph of the whole course with the already-covered parts marked up as an overview over the progress; see `import_graph.py` from the `lmhtools` utilities [LMH].

#### 14.2.4 Structure Sharing

The `\STRlabel` macro takes two arguments: a label and the content and stores the content for later use by `\STRcopy`[ $\langle URL \rangle$ ]{ $\langle label \rangle$ }, which expands to the previously stored content. If the `\STRlabel` macro was in a different file, then we can give a URL  $\langle URL \rangle$  that lets  $\text{\LaTeX}$ ML generate the correct reference.

The `\STRlabel` macro has a variant `\STRsemantics`, where the label argument is optional, and which takes a third argument, which is ignored in  $\text{\LaTeX}$ . This allows to specify the meaning of the content (whatever that may mean) in cases, where the source document is not formatted for presentation, but is transformed into some content markup format.<sup>7</sup>

#### 14.2.5 Global Variables

Text fragments and modules can be made more re-usable by the use of global variables. For instance, the admin section of a course can be made course-independent (and therefore re-usable) by using variables (actually token registers) `courseAcronym` and `courseTitle` instead of the text itself. The variables can then be set in the  $\text{\LaTeX}$  preamble of the course notes file. `\setSGvar`{ $\langle vname \rangle$ }{ $\langle text \rangle$ } to set the global variable  $\langle vname \rangle$  to  $\langle text \rangle$  and `\useSGvar`{ $\langle vname \rangle$ } to reference it.

With `\ifSGvar` we can test for the contents of a global variable: the macro call `\ifSGvar`{ $\langle vname \rangle$ }{ $\langle val \rangle$ }{ $\langle ctext \rangle$ } tests the content of the global variable  $\langle vname \rangle$ , only if (after expansion) it is equal to  $\langle val \rangle$ , the conditional text  $\langle ctext \rangle$  is formatted.

<sup>7</sup>EdNOTE: document LMID und LMXRef here if we decide to keep them.

### 14.2.6 Colors

For convenience, the `omdoc` package defines a couple of color macros for the `color` package: For instance `\blue` abbreviates `\textcolor{blue}`, so that `\blue{<something>}` writes *<something>* in blue. The macros `\red`, `\green`, `\cyan`, `\magenta`, `\brown`, `\yellow`, `\orange`, `\gray`, and finally `\black` are analogous.

## 14.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the `TeX` GitHub repository [\[sTeX\]](#).

1. when option `book` which uses `\pagestyle{headings}` is given and semantic macros are given in the `omgroup` titles, then they sometimes are not defined by the time the heading is formatted. Need to look into how the headings are made.

# Chapter 15

## Slides and Course Notes

We present a document class from which we can generate both course slides and course notes in a transparent way.

### 15.1 Introduction

The `mikoslides` document class is derived from `beamer.cls` [Tana], it adds a “notes version” for course notes derived from the `omdoc` class [Kohlhase:smomdl] that is more suited to printing than the one supplied by `beamer.cls`.

### 15.2 The User Interface

The `mikoslides` class takes the notion of a slide frame from Till Tantau’s excellent `beamer` class and adapts its notion of frames for use in the  $\text{\TeX}$ and OMDoc. To support semantic course notes, it extends the notion of mixing frames and explanatory text, but rather than treating the frames as images (or integrating their contents into the flowing text), the `mikoslides` package displays the slides as such in the course notes to give students a visual anchor into the slide presentation in the course (and to distinguish the different writing styles in slides and course notes).

In practice we want to generate two documents from the same source: the slides for presentation in the lecture and the course notes as a narrative document for home study. To achieve this, the `mikoslides` class has two modes: *slides mode* and *notes mode* which are determined by the package option.

#### 15.2.1 Package Options

The `mikoslides` class takes a variety of class options:<sup>8</sup>

- |                           |   |
|---------------------------|---|
| <code>slides</code>       | • The options <code>slides</code> and <code>notes</code> switch between slides mode and notes mode (see Section 15.2.2).  |
| <code>notes</code>        |   |
| <code>sectocframes</code> | • If the option <code>sectocframes</code> is given, then for the <code>omgroups</code> , special frames with the <code>omgroup</code> title (and number) are generated. |

<code>showmeta</code>	<ul style="list-style-type: none"> <li>• <code>showmeta</code>. If this is set, then the metadata keys are shown (see [Koh20b] for details and customization options).</li> </ul>
<code>frameimages</code> <code>fiboxed</code>	<ul style="list-style-type: none"> <li>• If the option <code>frameimages</code> is set, then slide mode also shows the <code>\frameimage</code>-generated frames (see section 15.2.4). If also the <code>fiboxed</code> option is given, the slides are surrounded by a box.</li> </ul>
<code>topsect</code>	<ul style="list-style-type: none"> <li>• <code>topsect=&lt;sect&gt;</code> can be used to specify the top-level sectioning level; the default for <code>&lt;sect&gt;</code> is <code>section</code>.</li> </ul>

### 15.2.2 Notes and Slides

`frame` Slides are represented with the `frame` just like in the `beamer` class, see [Tanb] for details.  
`note` The `mikoslides` class adds the `note` environment for encapsulating the course note fragments.<sup>4</sup>

⚠ Note that it is essential to start and end the `notes` environment at the start of the line – in particular, there may not be leading blanks – else L<sup>A</sup>T<sub>E</sub>X becomes confused and throws error messages that are difficult to decipher.

```
\ifnotes\maketitle\else
\frame[noframenumbering]\maketitle\fi

\begin{note}
  We start this course with ...
\end{note}

\begin{frame}
  \frametitle{The first slide}
  ...
\end{frame}
\begin{note}
  ... and more explanatory text
\end{note}

\begin{frame}
  \frametitle{The second slide}
  ...
\end{frame}
...
```

Example 4: A typical Course Notes File

By interleaving the `frame` and `note` environments, we can build course notes as shown in Figure 4.

`\ifnotes` Note the use of the `\ifnotes` conditional, which allows different treatment between `notes` and `slides` mode – manually setting `\notesttrue` or `\notesfalse` is strongly discouraged however.

<sup>8</sup>EDNOTE: leaving out `noproblems` for the moment until we decide what to do with it.

<sup>4</sup>MK: it would be very nice, if we did not need this environment, and this should be possible in principle, but not without intensive L<sup>A</sup>T<sub>E</sub>X trickery. Hints to the author are welcome.

⚠: We need to give the title frame the `noframenumbering` option so that the frame numbering is kept in sync between the slides and the course notes.

⚠: The `beamer` class recommends not to use the `allowframebreaks` option on frames (even though it is very convenient). This holds even more in the `mikoslides` case: At least in conjunction with `\newpage`, frame numbering behaves funnily (we have tried to fix this, but who knows).

If we want to transclude a the contents of a file as a note, we can use a new variant `\inputref*` of the `\inputref` macro from [KGA20]: `\inputref*{foo}` is equivalent to `\begin{note}\inputref{foo}\end{note}`.

There are some environments that tend to occur at the top-level of `note` environments. We make convenience versions of these: e.g. the `nomtext` environment is just an `omtext` inside a `note` environment (but looks nicer in the source, since it avoids one level of source indenting). Similarly, we have the `nomgroup`, `ndefinition`, `nexample`, `nsproof`, and `nassertion` environments.

### 15.2.3 Header and Footer Lines of the Slides

The default logo provided by the `mikoslides` package is the  $\text{\LaTeX}$  logo it can be customized using `\setslidelogo{<logo name>}`.

The default footer line of the `mikoslides` package mentions copyright and licensing. In the `beamer` class, `\source` stores the author's name as the copyright holder. By default it is *Michael Kohlhase* in the `mikoslides` package since he is the main user and designer of this package. `\setsource{<name>}` can change the writer's name. For licensing, we use the Creative Commons Attribution-ShareAlike license by default to strengthen the public domain. If package `hyperref` is loaded, then we can attach a hyperlink to the license logo. `\setlicensing[<url>]{<logo name>}` is used for customization, where `<url>` is optional.

### 15.2.4 Frame Images

Sometimes, we want to integrate slides as images after all – e.g. because we already have a PowerPoint presentation, to which we want to add  $\text{\LaTeX}$ notes. In this case we can use `\frameimage[<opt>]{<path>}`, where `<opt>` are the options of `\includegraphics` from the `graphicx` package [CR99] and `<path>` is the file path (extension can be left off like in `\includegraphics`). We have added the `label` key that allows to give a frame label that can be referenced like a regular `beamer` frame.<sup>9</sup>

The `\mhframeimage` macro is a variant of `\frameimage` with repository support. Instead of writing

```
\frameimage{\MathHub{fooMH/bar/source/baz/foobar}}
```

we can simply write (assuming that `\MathHub` is defined as above)

```
\mhframeimage[fooMH/bar]{baz/foobar}
```

Note that the `\mhframeimage` form is more semantic, which allows more advanced document management features in `MathHub`.

If `baz/foobar` is the “current module”, i.e. if we are on the `MathHub` path `...MathHub/fooMH/bar...`, then stating the repository in the first optional argument is redundant, so we can just use

<sup>9</sup>EdNOTE: MK: the `hyperref` link does not seem to work yet. I wonder why but do not have the time to fix it.

`\mhframeimage{baz/foobar}`

## 15.2.5 Colors and Highlighting

`\textwarning` The `\textwarning` macro generates a warning sign: 

## 15.2.6 Front Matter, Titles, etc.

### 15.2.7 Excursions

In course notes, we sometimes want to point to an “excursion” – material that is either presupposed or tangential to the course at the moment – e.g. in an appendix. The typical setup is the following:

```
\excursion{founif}{../ex/founif}{We will cover first-order unification in}
...
\begin{appendix}\printexcursions\end{appendix}
```

```
\excursion      The \excursion{<ref>}{<path>}{<text>} is syntactic sugar for
\activateexcursion \begin{nomtext}[title=Excursion]
                  \activateexcursion{founif}{../ex/founif}
                  We will cover first-order unification in \sref{founif}.
                  \end{nomtext}
```

```
\activateexcursion where \activateexcursion{<path>} augments the \printexcursions macro by a
\printexcursions call \inputref{<path>}. In this way, the \printexcursions macro (usually in the
                  appendix) will collect up all excursions that are specified in the main text.
```

Sometimes, we want to reference – in an excursion – part of another. We can use `\excursionref{<label>}` for that.

Finally, we usually want to put the excursions into an `omgroup` environment and add an introduction, therefore we provide the a variant of the `\printexcursions` macro:

```
\excursiongroup \excursiongroup[id=<id>,intro=<path>] is equivalent to

\begin{note}
\begin{omgroup}[id=<id>]{Excursions}
  \inputref{<path>}
  \printexcursions
\end{omgroup}
\end{note}
```

## 15.2.8 Miscellaneous

## 15.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the [sTeXGitHub](#) repository [[sTeX](#)].

1. when option `book` which uses `\pagestyle{headings}` is given and semantic macros are given in the `omgroup` titles, then they sometimes are not defined by the time the heading is formatted. Need to look into how the headings are made. This is a problem of the underlying `omdoc` package.

# Chapter 16

## problem.sty: An Infrastructure for formatting Problems

The `problem` package supplies an infrastructure that allows specify problems and to reuse them efficiently in multiple environments.

### 16.1 Introduction

The `problem` package supplies an infrastructure that allows specify problem. Problems are text fragments that come with auxiliary functions: hints, notes, and solutions<sup>5</sup>. Furthermore, we can specify how long the solution to a given problem is estimated to take and how many points will be awarded for a perfect solution.

Finally, the `problem` package facilitates the management of problems in small files, so that problems can be re-used in multiple environment.

### 16.2 The User Interface

#### 16.2.1 Package Options

<code>solutions</code>	The <code>problem</code> package takes the options <code>solutions</code> (should solutions be output?), <code>notes</code>
<code>notes</code>	(should the problem notes be presented?), <code>hints</code> (do we give the hints?), <code>gnotes</code> (do we
<code>hints</code>	show grading notes?), <code>pts</code> (do we display the points awarded for solving the problem?),
<code>gnotes</code>	<code>min</code> (do we display the estimated minutes for problem soling). If theses are specified, then
<code>pts</code>	the corresponding auxiliary parts of the problems are output, otherwise, they remain
<code>min</code>	invisible.
<code>boxed</code>	The <code>boxed</code> option specifies that problems should be formatted in framed boxes so
<code>test</code>	that they are more visible in the text. Finally, the <code>test</code> option signifies that we are in
	a test situation, so this option does not show the solutions (of course), but leaves space
	for the students to solve them.
<code>mh</code>	The <code>mh</code> option turns on MathHub support; see [ <code>Kohlhase:mss</code> ].
<code>showmeta</code>	Finally, if the <code>showmeta</code> is set, then the metadata keys are shown (see [ <code>Kohlhase:metakeys</code> ]
	for details and customization options).

---

<sup>5</sup>for the moment multiple choice problems are not supported, but may well be in a future version

## 16.2.2 Problems and Solutions

**problem** The main environment provided by the **problem** package is (surprise surprise) the **problem** environment. It is used to mark up problems and exercises. The environment takes an optional KeyVal argument with the keys **id** as an identifier that can be reference later, **pts** for the points to be gained from this exercise in homework or quiz situations, **min** for the estimated minutes needed to solve the problem, and finally **title** for an informative title of the problem. For an example of a marked up problem see Figure 5 and the resulting markup see Figure 6.

```
\usepackage[solutions,hints,pts,min]{problem}
\begin{document}
  \begin{problem}[id=elephants,pts=10,min=2,title=Fitting Elephants]
    How many Elephants can you fit into a Volkswagen beetle?
  \begin{hint}
    Think positively, this is simple!
  \end{hint}
  \begin{exnote}
    Justify your answer
  \end{exnote}
  \begin{solution}[for=elephants,height=3cm]
    Four, two in the front seats, and two in the back.
  \begin{gnote}
    if they do not give the justification deduct 5 pts
  \end{gnote}
  \end{solution}
  \end{problem}
\end{document}
```

Example 5: A marked up Problem

**solution** The **solution** environment can be to specify a solution to a problem. If the **solutions** option is set or **\solutionstrue** is set in the text, then the solution will be presented in the output. The **solution** environment takes an optional KeyVal argument with the keys **id** for an identifier that can be reference **for** to specify which problem this is a solution for, and **height** that allows to specify the amount of space to be left in test situations (i.e. if the **test** option is set in the **\usepackage** statement).

```
Problem0.0 ()
How many Elephants can you fit into a Volkswagen beetle?

---

Hint: Think positively, this is simple!

---

Note:Justify your answer

---

Solution: Four, two in the front seats, and two in the back.

---

```

Example 6: The Formatted Problem from Figure 5

**hint** The **hint** and **exnote** environments can be used in a **problem** environment to give hints and to make notes that elaborate certain aspects of the problem.

**gnote** The **gnote** (grading notes) environment can be used to document situations that

may arise in grading.

Sometimes we would like to locally override the `solutions` option we have given to the package. To turn on solutions we use the `\startsolutions`, to turn them off, `\stopsolutions`. These two can be used at any point in the documents.

Also, sometimes, we want content (e.g. in an exam with master solutions) conditional on whether solutions are shown. This can be done with the `\ifsolutions` conditional.

### 16.2.3 Multiple Choice Blocks

Multiple choice blocks can be formatted using the `mcb` environment, in which single choices are marked up with `\mcc[⟨keyvals⟩]{⟨text⟩}` macro, which takes an optional key/value argument `⟨keyvals⟩` for choice metadata and a required argument `⟨text⟩` for the proposed answer text. The following keys are supported

- `T` • `T` for true answers, `F` for false ones,
- `F` • `Ttext` the verdict for true answers, `Ftext` for false ones, and
- `Ttext` • `feedback` for a short feedback text given to the student.
- `Ftext`
- `feedback`

See Figure ?? for an example

### 16.2.4 Including Problems

The `\includeproblem` macro can be used to include a problem from another file. It takes an optional `KeyVal` argument and a second argument which is a path to the file containing the problem (the macro assumes that there is only one problem in the include file). The keys `title`, `min`, and `pts` specify the problem title, the estimated minutes for solving the problem and the points to be gained, and their values (if given) overwrite the ones specified in the `problem` environment in the included file.

### 16.2.5 Reporting Metadata

The sum of the points and estimated minutes (that we specified in the `pts` and `min` keys to the `problem` environment or the `\includeproblem` macro) to the log file and the screen after each run. This is useful in preparing exams, where we want to make sure that the students can indeed solve the problems in an allotted time period.

The `\min` and `\pts` macros allow to specify (i.e. to print to the margin) the distribution of time and reward to parts of a problem, if the `pts` and `pts` package options are set. This allows to give students hints about the estimated time and the points to be awarded.

## 16.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the [sTeXGitHub repository](#) [[sTeX](#)].

1. none reported yet

```

\begin{problem}[title=Functions]
  What is the keyword to introduce a function definition in python?
  \begin{mcb}
    \mcc[T]{def}
    \mcc[F,feedback=that is for C and C++){function}
    \mcc[F,feedback=that is for Standard ML]{fun}
    \mcc[F,Ftext=Noooooooooooo,feedback=that is for Java]{public static void}
  \end{mcb}
\end{problem}

```

---

**Problem0.0 ()**

What is the keyword to introduce a function definition in python?

1. def
2. function
3. fun
4. public static void

---

**Problem0.0 ()**

What is the keyword to introduce a function definition in python?

1. def  
!
2. function  
that is for C and C++
3. fun  
that is for Standard ML
4. public static void  
that is for Java

Example 7: A Problem with a multiple choice block

## Chapter 17

# **`hwexam.sty/cls`: An Infrastructure for formatting Assignments and Exams**

The `hwexam` package and class allows individual course assignment sheets and compound assignment documents using problem files marked up with the `problem` package.

### Contents

## 17.1 Introduction

The `hwexam` package and class supplies an infrastructure that allows to format nice-looking assignment sheets by simply including problems from problem files marked up with the `problem` package [Kohlhase:problem]. It is designed to be compatible with `problems.sty`, and inherits some of the functionality.

## 17.2 The User Interface

### 17.2.1 Package and Class Options

The `hwexam` package and class take the options `solutions`, `notes`, `hints`, `gnotes`, `pts`, `min`, and `boxed` that are just passed on to the `problems` package (cf. its documentation for a description of the intended behavior).

`showmeta` If the `showmeta` option is set, then the metadata keys are shown (see [Kohlhase:metakeys] for details and customization options).

The `hwexam` class additionally accepts the options `report`, `book`, `chapter`, `part`, and `showignores`, of the `omdoc` package [Kohlhase:smomdl] on which it is based and passes them on to that. For the `extrefs` option see [Kohlhase:sref].

### 17.2.2 Assignments

`assignment` This package supplies the `assignment` environment that groups problems into assignment sheets. It takes an optional KeyVal argument with the keys `number` (for the assignment number; if none is given, 1 is assumed as the default or — in multi-assignment documents  
`number` — the ordinal of the `assignment` environment), `title` (for the assignment title; this is referenced in the title of the assignment sheet), `type` (for the assignment type; e.g. “quiz”, or “homework”), `given` (for the date the assignment was given), and `due` (for the date the assignment is due).

### 17.2.3 Typesetting Exams

`multiple` Furthermore, the `hwexam` package takes the option `multiple` that allows to combine multiple assignment sheets into a compound document (the assignment sheets are treated as section, there is a table of contents, etc.).

`test` Finally, there is the option `test` that modifies the behavior to facilitate formatting tests. Only in `test` mode, the macros `\testspace`, `\testnewpage`, and `\testemptypage` have an effect: they generate space for the students to solve the given problems. Thus they can be left in the L<sup>A</sup>T<sub>E</sub>X source.

`\testspace` `\testspace` takes an argument that expands to a dimension, and leaves vertical space accordingly. `\testnewpage` makes a new page in `test` mode, and `\testemptypage` generates an empty page with the cautionary message that this page was intentionally left empty.

`testheading` Finally, the `\testheading` takes an optional keyword argument where the keys  
`duration` `duration` specifies a string that specifies the duration of the test, `min` specifies the equivalent in number of minutes, and `reqpts` the points that are required for a perfect grade.  
`min`  
`reqpts`

### 17.2.4 Including Assignments

`\inputassignment` The `\inputassignment` macro can be used to input an assignment from another file. It takes an optional `KeyVal` argument and a second argument which is a path to the file containing the problem (the macro assumes that there is only one `assignment` environment in the included file). The keys `number`, `title`, `type`, `given`, and `due` are just as for the `assignment` environment and (if given) overwrite the ones specified in the `assignment` environment in the included file.

### 17.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the `STEX`GitHub repository [\[sTeX\]](#).

1. none reported yet.

**Part IV**  
**Implementation**

## Chapter 18

# STEX -Basics Implementation

### 18.1 The STEXDocument Class

The `stex` document class is pretty straight-forward: It largely extends the `standalone` package and loads the `stex` package, passing all provided options on to the package.

```
1 <*cls>
2
3 %%%%%%%%% basics.dtx %%%%%%%%%
4
5 \RequirePackage{expl3,l3keys2e}
6 \ProvidesExplClass{stex}{2021/08/01}{1.9}{bla}
7 \LoadClass[border=1px,varwidth]{standalone}
8 \setlength\textwidth{15cm}
9
10 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{stex}}
11 \ProcessOptions
12
13 \RequirePackage{stex}
14 </cls>
```

### 18.2 Preliminaries

```
15 <*package>
16
17 %%%%%%%%% basics.dtx %%%%%%%%%
18
19 \RequirePackage{expl3,l3keys2e,ltxcmds}
20 \ProvidesExplPackage{stex}{2021/08/01}{1.9}{bla}
21 \RequirePackage{expl-keystr-compatible}
22 \RequirePackage{morewrites}
23
24 Package options:
25 \keys_define:nn { stex } {
26   debug      .clist_set:N = \c_stex_debug_clist ,
27   showmods   .bool_set:N  = \c_stex_showmods_bool ,
```

```

26 lang      .clist_set:N = \c_stex_languages_clist ,
27 mathhub   .tl_set_x:N  = \mathhub ,

133     }
134   }
135 }

```

(End definition for \stex\_suppress\_html:n. This function is documented on page ??.)

`\stex_annotate:env`

`\stex_annotate_invisible:n`

`\stex_annotate_invisible:nnn`

We define four macros for introducing attributes in the HTML output. The definitions depend on the “backend” used (L<sup>A</sup>T<sub>E</sub>XML, S<sup>C</sup>A<sup>L</sup>T<sub>E</sub>X, p<sup>D</sup>F<sup>L</sup>A<sup>T</sup>E<sub>X</sub>).

The p<sup>D</sup>F<sup>L</sup>A<sup>T</sup>E<sub>X</sub>-macros largely do nothing; the S<sup>C</sup>A<sup>L</sup>T<sub>E</sub>X-implementations are pretty clear in what they do, the L<sup>A</sup>T<sub>E</sub>XML-implementations resort to perl bindings.

```
136 \scalatex_if:TF{

## 18.6 Languages

```

219 <@@=stex_language>

```

`\c_stex_languages_prop`  
`\c_stex_language_abbrevs_prop`

We store language abbreviations in two (mutually inverse) property lists:

```

220 \prop_const_from_keyval:Nn \c_stex_languages_prop {
221     en = english ,
222     de = ngerman ,
223     ar = arabic ,
224     bg = bulgarian ,
225     ru = russian ,
226     fi = finnish ,
227     ro = romanian ,
228     tr = turkish ,
229     fr = french
230 }

```

```

231
232 \prop_const_from_keyval:Nn \c_stex_language_abbrevs_prop {
233   english   = en ,
234   ngerman   = de ,
235   arabic    = ar ,
236   bulgarian = bg ,
237   russian   = ru ,
238   finnish   = fi ,
239   romanian  = ro ,
240   turkish   = tr ,
241   french    = fr
242 }
243 % todo: chinese simplified (zhs)
244 %       chinese traditional (zht)

```

(End definition for `\c_stex_languages_prop` and `\c_stex_language_abbrevs_prop`. These variables are documented on page 10.)

we use the `lang`-package option to load the corresponding babel languages:

```

245 \clist_if_empty:NF \c_stex_languages_clist {
246   \clist_clear:N \l_tmpa_clist
247   \clist_map_inline:Nn \c_stex_languages_clist {
248     \prop_get:NnNTF \c_stex_languages_prop { #1 } \l_tmpa_str {
249       \clist_put_right:No \l_tmpa_clist \l_tmpa_str
250     } {
251       \msg_error:nxx{stex}{error/unknownlanguage}{\l_tmpa_str}
252     }
253   }
254   \stex_debug:nn{lang} {Languages:~\clist_use:Nn \l_tmpa_clist {,~} }
255   \RequirePackage[\clist_use:Nn \l_tmpa_clist,]{babel}
256 }

```

## 18.7 Activating/Deactivating Macros

`\stex_deactivate_macro:Nn`

```

257 \cs_new_protected:Nn \stex_deactivate_macro:Nn {
258   \exp_after:wN\let\csname \detokenize{#1} - orig\endcsname#1
259   \def#1{

283 }
```

### 19.1 Generic Path Handling

We treat paths as L<sup>A</sup>T<sub>E</sub>X3-sequences (of the individual path segments, i.e. separated by a /-character) unix-style; i.e. a path is absolute if the sequence starts with an empty entry.

```
\stex_path_from_string:Nn
\stex_path_from_string:NV
\stex_path_from_string:cn
\stex_path_from_string:cV
282 \cs_new_protected:Nn \stex_path_from_string:Nn {
283   \str_set:Nx \l_tmpa_str { #2 }
284   \str_if_empty:NTF \l_tmpa_str {
285     \seq_clear:N #1
286   }{
287     \exp_args:NNNo \seq_set_split:Nnn #1 / { \l_tmpa_str }
288     \sys_if_platform_windows:T{
289       \seq_clear:N \l_tmpa_tl
290       \seq_map_inline:Nn #1 {
291         \seq_set_split:Nnn \l_tmpb_tl \c_backslash_str { ##1 }
292         \seq_concat:NNN \l_tmpa_tl \l_tmpa_tl \l_tmpb_tl

```

```

293     }
294     \seq_set_eq:NN #1 \l_tmpa_tl
295   }
296   \stex_path_canonicalize:N #1
297 }
298 }
299 \cs_generate_variant:Nn \stex_path_from_string:Nn
300 { NV, cn, cV }

```

(End definition for `\stex_path_from_string:Nn`. This function is documented on page 11.)

`\stex_path_to_string:NN`  
`\stex_path_to_string:N`

```

301 \cs_new_protected:Nn \stex_path_to_string:NN {
302   \exp_args:NNe \str_set:Nn #2 { \seq_use:Nn #1 / }
303 }
304
305 \cs_new:Nn \stex_path_to_string:N {
306   \seq_use:Nn #1 /
307 }

```

(End definition for `\stex_path_to_string:NN` and `\stex_path_to_string:N`. These functions are documented on page 11.)

`\c__stex_path_dot_str`  
`\c__stex_path_up_str`

. and .., respectively.

```

308 \str_const:Nn \c__stex_path_dot_str {.}
309 \str_const:Nn \c__stex_path_up_str {...}

```

(End definition for `\c__stex_path_dot_str` and `\c__stex_path_up_str`.)

`\stex_path_canonicalize:N` Canonicalizes the path provided; in particular, resolves . and .. path segments.

```

310 \cs_new_protected:Nn \stex_path_canonicalize:N {
311   \seq_if_empty:NF #1 {
312     \seq_clear:N \l_tmpa_seq

362 }

```

(End definition for `\stex_kpsewhich:n`. This function is documented on page 11.)

We determine the PWD

`\c_stex_pwd_seq`  
`\c_stex_pwd_str`

```

363 \sys_if_platform_windows:TF{
364   \stex_kpsewhich:n{-expand-var~\c_percent_str CD\c_percent_str}
365 }{
366   \stex_kpsewhich:n{-var-value~PWD}
367 }
368
369 \stex_path_from_string:Nn\c_stex_pwd_seq\l_stex_kpsewhich_return_str
370 \stex_path_to_string:NN\c_stex_pwd_seq\c_stex_pwd_str
371 \stex_debug:nn {mathhub} {PWD:~\str_use:N\c_stex_pwd_str}

```

(End definition for `\c_stex_pwd_seq` and `\c_stex_pwd_str`. These variables are documented on page 11.)

## 19.3 File Hooks and Tracking

372 `<@@=stex_files>`

We introduce hooks for file inputs that keep track of the absolute paths of files used. This will be useful to keep track of modules, their archives, namespaces etc.

Note that the absolute paths are only accurate in `\input`-statements for paths relative to the PWD, so they shouldn't be relied upon in any other setting than for  $\text{\TeX}$ -purposes.

`\g__stex_files_stack` keeps track of file changes

373 `\seq_gclear_new:N\g__stex_files_stack`

(End definition for `\g__stex_files_stack`.)

`\c_stex_mainfile_seq`

`\c_stex_mainfile_str`

374 `\str_set:Nx \c_stex_mainfile_str {\c_stex_pwd_str/\jobname.tex}`

375 `\stex_path_from_string:Nn \c_stex_mainfile_seq`

376 `\c_stex_mainfile_str`

(End definition for `\c_stex_mainfile_seq` and `\c_stex_mainfile_str`. These variables are documented on page 11.)

`\g_stex_currentfile_seq` Hooks for file inputs that push/pop `\g__stex_files_stack` to update `\c_stex_mainfile_seq`.

```

377 \seq_gclear_new:N\g_stex_currentfile_seq
378 \AddToHook{file/before}{
379   \stex_path_from_string:Nn\g_stex_currentfile_seq{\CurrentFilePath}
380   \stex_path_if_absolute:NTF\g_stex_currentfile_seq{
381     \exp_args:NNe\seq_put_right:Nn\g_stex_currentfile_seq{\CurrentFile}
382   }{
383     \stex_path_from_string:Nn\g_stex_currentfile_seq{
384       \c_stex_pwd_str/\CurrentFilePath/\CurrentFile
385     }
386   }
387   \seq_gset_eq:NN\g_stex_currentfile_seq\g_stex_currentfile_seq
388   \exp_args:NNo\seq_gpush:Nn\g__stex_files_stack\g_stex_currentfile_seq
389 }
390 \AddToHook{file/after}{
391   \seq_if_empty:NF\g__stex_files_stack{
392     \seq_gpop:Nn\g__stex_files_stack\l_tmpa_seq
393   }
394   \seq_if_empty:NTF\g__stex_files_stack{
395     \seq_gset_eq:NN\g_stex_currentfile_seq\c_stex_mainfile_seq
396   }{
397     \seq_get:NN\g__stex_files_stack\l_tmpa_seq
398     \seq_gset_eq:NN\g_stex_currentfile_seq\l_tmpa_seq
399   }
400 }
```

(End definition for `\g_stex_currentfile_seq`. This variable is documented on page 12.)

## 19.4 MathHub Repositories

```

917   }{
918     \str_set:Nx \l_stex_modules_ns_str {
919       \l_tmpa_str/\stex_path_to_string:N \l_tmpa_seq
920     }
921   }
922 }

```

(End definition for `\stex_modules_compute_namespace:nN`. This function is documented on page 16.)

Stores its return values in:

`\l_stex_modules_ns_str`

```

923 \str_new:N \l_stex_modules_ns_str

```

(End definition for `\l_stex_modules_ns_str`. This variable is documented on page ??.)

`\stex_modules_current_namespace:` Computes the current namespace based on the current MathHub repository (if existent) and the current file.

```

924 \cs_new_protected:Nn \stex_modules_current_namespace: {
925   \prop_get:NnNTF \l_stex_current_repository_prop { ns } \l_tmpa_str {
926     \stex_modules_compute_namespace:nN \l_tmpa_str \g_stex_currentfile_seq
927   }{
928     % split off file extension
929     \seq_set_eq:NN \l_tmpa_seq \g_stex_currentfile_seq
930     \seq_pop_right:NN \l_tmpa_seq \l_tmpb_str
931     \exp_args:NNno \seq_set_split:Nnn \l_tmpb_seq . \l_tmpb_str
932     \seq_get_left:NN \l_tmpb_seq \l_tmpb_str
933     \seq_put_right:No \l_tmpa_seq \l_tmpb_str

```

```

934     \str_set:Nx \l_stex_modules_ns_str {
935         file:/\stex_path_to_string:N \l_tmpa_seq
936     }
937 }
938 }

```

(End definition for `\stex_modules_current_namespace:`. This function is documented on page 16.)

## 21.1 The module environment

module arguments:

```

939 \keys_define:nn { stex / module } {
940     title          .str_set_x:N = \l_stex_module_title_str ,
941     ns             .str_set_x:N = \l_stex_module_ns_str ,
942     lang           .str_set_x:N = \l_stex_module_lang_str ,
943     sig            .str_set_x:N = \l_stex_module_sig_str ,
944     creators       .str_set_x:N = \l_stex_module_creators_str ,
945     contributors   .str_set_x:N = \l_stex_module_contributors_str ,
946     meta           .str_set_x:N = \l_stex_module_meta_str
947 }
948
949 \cs_new_protected:Nn \__stex_modules_args:n {
950     \str_clear:N \l_stex_module_title_str
951     \str_clear:N \l_stex_module_ns_str
952     \str_clear:N \l_stex_module_lang_str
953     \str_clear:N \l_stex_module_sig_str
954     \str_clear:N \l_stex_module_creators_str
955     \str_clear:N \l_stex_module_contributors_str
956     \str_clear:N \l_stex_module_meta_str
957     \keys_set:nn { stex / module } { #1 }
958 }
959
960 % module parameters here? In the body?
961

```

`\stex_module_setup:nn` Sets up a new module property list:

```

962 \cs_new_protected:Nn \stex_module_setup:nn {
963     \str_set:Nx \l_stex_module_name_str { #2 }
964     \__stex_modules_args:n { #1 }
965
966     First, we set up the name and namespace of the module.
967     Are we in a nested module?
968
969     \stex_if_in_module:TF {
970         % Nested module
971         \prop_get:NnN \l_stex_current_module_prop
972         { ns } \l_stex_module_ns_str
973         \str_set:Nx \l_stex_module_name_str {
974             \prop_item:Nn \l_stex_current_module_prop
975             { name } / \l_stex_module_name_str
976         }
977     }
978     {
979         % not nested:
980         \str_if_empty:NT \l_stex_module_ns_str {

```

```

976     \stex_modules_current_namespace:
977     \str_set_eq:NN \l_stex_module_ns_str \l_stex_modules_ns_str
978     \exp_args:NNNo \seq_set_split:Nnn \l_tmpa_seq
979       / {\l_stex_module_ns_str}
980     \seq_pop_right:NN \l_tmpa_seq \l_tmpa_str
981     \str_if_eq:NNT \l_tmpa_str \l_stex_module_name_str {
982       \str_set:Nx \l_stex_module_ns_str {
983         \stex_path_to_string:N \l_tmpa_seq
984       }
985     }
986   }
987 }

```

Next, we determine the language of the module:

```

988 \str_if_empty:NT \l_stex_module_lang_str {
989   \seq_get_right:NN \g_stex_currentfile_seq \l_tmpa_str
990   \seq_set_split:NnV \l_tmpa_seq . \l_tmpa_str
991   \seq_pop_right:NN \l_tmpa_seq \l_tmpa_str % .tex
992   \seq_pop_left:NN \l_tmpa_seq \l_tmpa_str % <filename>
993   \seq_if_empty:NF \l_tmpa_seq { %remaining element should be language
994     \stex_debug:nn{modules} {Language~\l_stex_module_lang_str~
995       inferred~from~file~name}
996     \seq_pop_left:NN \l_tmpa_seq \l_stex_module_lang_str
997   }
998 }
999
1000 \str_if_empty:NF \l_stex_module_lang_str {
1001   \prop_get:NVNTF \c_stex_languages_prop \l_stex_module_lang_str
1002   \l_tmpa_str {
1003     \ltx@ifpackageloaded{babel}{
1004       \exp_args:Nx \selectlanguage { \l_tmpa_str }
1005     }{}
1006   } {
1007     \msg_error:nnn{stex}{error/unknownlanguage}{\l_tmpa_str}
1008   }
1009 }

```

We check if we need to extend a signature module, and set `\l_stex_current_module_prop` accordingly:

```

1010 \str_if_empty:NTF \l_stex_module_sig_str {
1011   \str_clear:N \l_tmpa_str
1012   \seq_clear:N \l_tmpa_seq
1013   \tl_clear:N \l_tmpa_tl

```

# Chapter 27

## The Implementation

### 27.1 Package Options

We declare some switches which will modify the behavior according to the package options. Generally, an option `xxx` will just set the appropriate switches to true (otherwise they stay false).<sup>10</sup>

```
3356 \*package>
3357 \@@=stex_sproof>
3358
3359 %%%%%%%%%%% sproof.dtx %%%%%%%%%%%
3360
```

### 27.2 Proofs

We first define some keys for the proof environment.

```
3361 \keys_define:nn { stex / spf } {
3362   id          .str_set:N = \l__stex_sproof_spf_id_str,
3363   display     .tl_set:N  = \l__stex_sproof_spf_display_tl,
3364   for         .tl_set:N  = \l__stex_sproof_spf_for_tl ,
3365   from        .tl_set:N  = \l__stex_sproof_spf_from_tl ,
3366   proofend    .tl_set:N  = \l__stex_sproof_spf_proofend_tl,
3367   type        .tl_set:N  = \l__stex_sproof_spf_type_tl,
3368   title       .tl_set:N  = \l__stex_sproof_spf_title_tl,
3369   continues   .tl_set:N  = \l__stex_sproof_spf_continues_tl,
3370   functions   .tl_set:N  = \l__stex_sproof_spf_functions_tl,
3371   method      .tl_set:N  = \l__stex_sproof_spf_method_tl
3372 }
3373 \cs_new_protected:Nn \__stex_sproof_spf_args:n {

`\spf@flow` We define this macro, so that we can test whether the `display` key has the value `flow`

```

3386 \def\spf@flow{flow}

```

(End definition for `\spf@flow`. This function is documented on page ??.)

For proofs, we will have to have deeply nested structures of enumerated list-like environments. However, L<sup>A</sup>T<sub>E</sub>X only allows `enumerate` environments up to nesting depth 4 and general list environments up to listing depth 6. This is not enough for us. Therefore we have decided to go along the route proposed by Leslie Lamport to use a single top-level list with dotted sequences of numbers to identify the position in the proof tree. Unfortunately, we could not use his `pf.sty` package directly, since it does not do automatic numbering, and we have to add keyword arguments all over the place, to accomodate semantic information.

`pst@with@label` This environment manages<sup>6</sup> the path labeling of the proof steps in the description environment of the outermost `proof` environment. The argument is the label prefix up to now; which we cache in `\pst@label` (we need evaluate it first, since are in the right place now!). Then we increment the proof depth which is stored in `\count10` (lower counters are used by T<sub>E</sub>X for page numbering) and initialize the next level counter `\count\count10` with 1. In the end call for this environment, we just decrease the proof depth counter by 1 again.

```

3387 \newcount\count_ten
3388 \newenvironment{pst@with@label}[1]{
3389   \edef\pst@label{#1}
3390   \advance\count_ten by 1\relax
3391   \count_ten=1
3392 }{
3393   \advance\count_ten by -1\relax
3394 }

```

`\the@pst@label` `\the@pst@label` evaluates to the current step label.

```

3395 \def\the@pst@label{
3396   \pst@make@label\pst@label{\number\count_ten}\l__stex_sproof_pstlabel_postfix_tl
3397 }

```

(End definition for `\the@pst@label`. This function is documented on page ??.)

`\setpstlabelstyle` `\setpstlabelstyle{metaKey-Val pairs}` makes the labeling style customizable. `\setpstlabelstyle{pr}` will change the labeling style from **P.1.2.3** to **Pr-1-2-3†**. `\setpstlabelstyledefault` will set the labeling style back to default.

```

The next two environments (proof steps) and comments, are mostly semantical, they take `KeyVal` arguments that specify their semantic role. In draft mode, they read these values and show them. If the surrounding proof had `display=flow`, then no new `\item` is generated, otherwise it is. In any case, the proof step number (at the current level) is incremented.

spfstep 13

```

3594   \next@pst@label
3595 }%

```

## 27.3 Justifications

We define the actions that are undertaken, when the keys for justifications are encountered. Here this is very simple, we just define an internal macro with the value, so that we can use it later.

```

3596 \keys_define:nn { stex / just }{
3597   id          .str_set:x:N = \l__stex_sproof_just_id_str,
3598   method      .tl_set:N   = \l__stex_sproof_just_method_tl,
3599   premises    .tl_set:N   = \l__stex_sproof_just_premises_tl,
3600   args        .tl_set:N   = \l__stex_sproof_just_args_tl
3601 }

```

The next three environments and macros are purely semantic, so we ignore the keyval arguments for now and only display the content.<sup>14</sup>

<sup>14</sup>EDNOTE: need to do something about the premise in draft mode.

**justification**

```
3602 \newenvironment{justification}[1] [] {}{}
```

**\premise**

```
3603 \newcommand\premise[2] [] {#2}
```

*(End definition for \premise. This function is documented on page ??.)*

**\justarg** the **\justarg** macro is purely semantic, so we ignore the keyval arguments for now and only display the content.

```
3604 \newcommand\justarg[2] [] {#2}
```

```
3605 \end{package}
```

*(End definition for \justarg. This function is documented on page ??.)*

Some auxiliary code, and clean up to be executed at the end of the package.

## Chapter 31

# document-structure.sty Implementation

### 31.1 The OMDoc Class

The functionality is spread over the `omdoc` class and package. The class provides the `document` environment and the `omdoc` element corresponds to it, whereas the package provides the concrete functionality.

```
3787 \*cls)
3788 \@@=document_structure)
3789 \ProvidesExplClass{omdoc}{2020/10/19}{1.4}{OMDoc Documents}
3790 \RequirePackage{l3keys2e,expl-keystr-compat}
```

### 31.2 Class Options

To initialize the `omdoc` class, we declare and process the necessary options using the `kvoptions` package for key/value options handling. For `omdoc.cls` this is quite simple. We have options `report` and `book`, which set the `\omdoc@cls@class` macro and pass on the macro to `omdoc.sty` for further processing.

`\omdoc@cls@class`

```
3791 \keys_define:nn{ document-structure / pkg }{
3792   class      .str_set_x:N = \c_document_structure_class_str,
3793   minimal    .bool_set:N = \c_document_structure_minimal_bool,
3794   report     .code:n      = {
3795     \ClassWarning{omdoc}{the option 'report' is deprecated, use 'class=report', instead}
3796     \str_set:Nn \c_document_structure_class_str {report}
3797   },
3798   book       .code:n      = {
3799     \ClassWarning{omdoc}{the option 'book' is deprecated, use 'class=book', instead}
3800     \str_set:Nn \c_document_structure_class_str {book}
3801   },
3802   bookpart   .code:n      = {
3803     \ClassWarning{omdoc}{the option 'bookpart' is deprecated, use 'class=book,topsect=chapter}
3804     \str_set:Nn \c_document_structure_class_str {book}
3805     \str_set:Nn \c_document_structure_topsect_str {chapter}
3806   },
```

```

3807 docopt      .str_set_x:N = \c_document_structure_docopt_str,
3808 unknown     .code:n      = {
3809   \PassOptionsToPackage{ \CurrentOption }{ omdoc }
3810 }
3811 }
3812 \ProcessKeysOptions{ document-structure / pkg }
3813 \str_if_empty:NT \c_document_structure_class_str {
3814   \str_set:Nn \c_document_structure_class_str {article}
3815 }
3816 \exp_after:wN\LoadClass\exp_after:wN[\c_document_structure_docopt_str]
3817   {\c_document_structure_class_str}
3818

```

### 31.3 Beefing up the document environment

Now, – unless the option `minimal` is defined – we include the `stex` package

```

3819 \RequirePackage{omdoc}
3820 \bool_if:NF \c_document_structure_minimal_bool {
3821   \RequirePackage{stex-compatibility}

```

And define the environments we need. The top-level one is the `document` environment, which we redefined so that we can provide keyval arguments.

**document** For the moment we do not use them on the L<sup>A</sup>T<sub>E</sub>X level, but the document identifier is picked up by L<sup>A</sup>T<sub>E</sub>XML.<sup>15</sup>

```

3822 \keys_define:nn { document-structure / document }{
3823   id .str_set_x:N = \c_document_structure_document_id_str
3824 }
3825 \let\__document_structure_orig_document=\document
3826 \renewcommand{\document}[1][]{
3827   \keys_set:nn{ document-structure / document }{ #1 }
3828   \stex_ref_new_doc_target:n { \c_document_structure_document_id_str }
3829   \__document_structure_orig_document
3830 }

```

Finally, we end the test for the `minimal` option.

```

3831 }
3832 \</cls>

```

### 31.4 Implementation: OMDoc Package

```

3833 \*package>
3834 \ProvidesExplPackage{omdoc}{2020/10/19}{1.4}{OMDoc document Structure}
3835 \RequirePackage{expl-keystr-compat,13keys2e}

```

### 31.5 Package Options

We declare some switches which will modify the behavior according to the package options. Generally, an option `xxx` will just set the appropriate switches to true (otherwise they stay false).

---

<sup>15</sup>EdNOTE: faking documentkeys for now. @HANG, please implement

```

3836
3837 \keys_define:nn{ document-structure / pkg }{
3838   class      .str_set_x:N = \c_document_structure_class_str,
3839   topsect    .str_set_x:N = \c_document_structure_topsect_str,
3840   % showignores .bool_set:N = \c_document_structure_showignores_bool,
3841 }
3842 \ProcessKeysOptions{ document-structure / pkg }
3843 \str_if_empty:NT \c_document_structure_class_str {
3844   \str_set:Nn \c_document_structure_class_str {article}
3845 }
3846 \str_if_empty:NT \c_document_structure_topsect_str {
3847   \str_set:Nn \c_document_structure_topsect_str {section}
3848 }

```

Then we need to set up the packages by requiring the `sref` package to be loaded.

```

3849 \RequirePackage{xspace}
3850 \RequirePackage{comment}
3851 \@ifpackageloaded{babel}{\RequirePackage[base]{babel}}

```

We set up triggers for the other languages, currently only German.

```

3852 \@ifpackageloaded{babel}{
3853   \clist_set:Nx \l_tmpa_clist {\bb1@loaded}
3854   \clist_if_in:NnT \l_tmpa_clist {ngerman}{
3855     \input{omdoc-ngerman.ldf}
3856   }
3857 }{}
3858 %\AfterBabelLanguage{ngerman}{\input{omdoc-ngerman.ldf}}

```

`\section@level`

Finally, we set the `\section@level` macro that governs sectioning. The default is two (corresponding to the `article` class), then we set the defaults for the standard classes `book` and `report` and then we take care of the levels passed in via the `topsect` option.

```

3859 \int_new:N \l_document_structure_section_level_int
3860 \str_case:VnF \c_document_structure_topsect_str {
3861   {part}{
3862     \int_set:Nn \l_document_structure_section_level_int {0}
3863   }
3864   {chapter}{
3865     \int_set:Nn \l_document_structure_section_level_int {1}
3866   }
3867 }{
3868   \str_case:VnF \c_document_structure_class_str {
3869     {book}{
3870       \int_set:Nn \l_document_structure_section_level_int {0}
3871     }
3872     {report}{
3873       \int_set:Nn \l_document_structure_section_level_int {0}
3874     }
3875   }{
3876     \int_set:Nn \l_document_structure_section_level_int {2}
3877   }
3878 }

```

## 31.6 Document Structure

The structure of the document is given by the `omgroup` environment just like in OMDoc. The hierarchy is adjusted automatically according to the  $\text{\LaTeX}$  class in effect.

`\currentsectionlevel` For the `\currentsectionlevel` and `\Currentsectionlevel` macros we use an internal macro `\current@section@level` that only contains the keyword (no markup). We initialize it with “document” as a default. In the generated OMDoc, we only generate a text element of class `omdoc_currentsectionlevel`, which will be instantiated by CSS later.<sup>16</sup>

EdN:16

```
3879 \def\current@section@level{document}%
3880 \newcommand\currentsectionlevel{\lowercase\expandafter{\current@section@level}\xspace}%
3881 \newcommand\Currentsectionlevel{\expandafter\MakeUppercase\current@section@level\xspace}%
```

*(End definition for \currentsectionlevel. This function is documented on page ??.)*

`\skipomgroup`

```
3882 \cs_new_protected:Npn \skipomgroup {
3883   \ifcase\l_document_structure_section_level_int
3884   \or\stepcounter{part}
3885   \or\stepcounter{chapter}
3886   \or\stepcounter{section}
3887   \or\stepcounter{subsection}
3888   \or\stepcounter{subsubsection}
3889   \or\stepcounter{paragraph}
3890   \or\stepcounter{subparagraph}
3891   \fi
3892 }
```

*(End definition for \skipomgroup. This function is documented on page ??.)*

`blindomgroup`

```
3893 \newcommand\at@begin@blindomgroup[1]{%
3894 \newenvironment{blindomgroup}
3895 {
3896   \int_incr:N\l_document_structure_section_level_int
3897   \at@begin@blindomgroup\l_document_structure_section_level_int
3898 }{}}
```

`\omgroup@nonum` convenience macro: `\omgroup@nonum{<level>}{<title>}` makes an unnumbered sectioning with title `<title>` at level `<level>`.

```
3899 \newcommand\omgroup@nonum[2]{
3900   \ifx\hyper@anchor\@undefined\else\phantomsection\fi
3901   \addcontentsline{toc}{#1}{#2}\@nameuse{#1}*{#2}
3902 }
```

*(End definition for \omgroup@nonum. This function is documented on page ??.)*

`\omgroup@num` convenience macro: `\omgroup@num{<level>}{<title>}` makes numbered sectioning with title `<title>` at level `<level>`. We have to check the `short` key was given in the `omgroup` environment and – if it is use it. But how to do that depends on whether the `rdfmata` package has been loaded. In the end we call `\sref@label@id` to enable crossreferencing.

```
3903 \newcommand\omgroup@num[2]{
```

<sup>16</sup>EDNOTE: MK: we may have to experiment with the more powerful uppercasing macro from `mfirstuc.sty` once we internationalize.

```

3904 \tl_if_empty:NTF \l__document_structure_omgroup_short_tl {
3905   \@nameuse{#1}{#2}
3906 }{
3907   \cs_if_exist:NTF\rdfmata@sectioning{
3908     \@nameuse{rdfmata@#1@old}[\l__document_structure_omgroup_short_tl]{#2}
3909   }{
3910     \@nameuse{#1}[\l__document_structure_omgroup_short_tl]{#2}
3911   }
3912 }
3913 %\sref@label@id@arg{\omdoc@ssect@name~\@nameuse{the#1}}\omgroup@id
3914 }

```

(End definition for \omgroup@num. This function is documented on page ??.)

omgroup

```

3915 \keys_define:nn { document-structure / omgroup }{
3916   id          .str_set_x:N = \l__document_structure_omgroup_id_str,
3917   date        .str_set_x:N = \l__document_structure_omgroup_date_str,
3918   creators    .clist_set:N = \l__document_structure_omgroup_creators_clist,
3919   contributors .clist_set:N = \l__document_structure_omgroup_contributors_clist,
3920   srccite     .tl_set:N    = \l__document_structure_omgroup_srccite_tl,
3921   type        .tl_set:N    = \l__document_structure_omgroup_type_tl,
3922   short       .tl_set:N    = \l__document_structure_omgroup_short_tl,
3923   display     .tl_set:N    = \l__document_structure_omgroup_display_tl,
3924   intro       .tl_set:N    = \l__document_structure_omgroup_intro_tl,
3925   loadmodules .bool_set:N  = \l__document_structure_omgroup_loadmodules_bool
3926 }
3927 \cs_new_protected:Nn \l__document_structure_omgroup_args:n {
3928   \str_clear:N \l__document_structure_omgroup_id_str
3929   \str_clear:N \l__document_structure_omgroup_date_str
3930   \clist_clear:N \l__document_structure_omgroup_creators_clist
3931   \clist_clear:N \l__document_structure_omgroup_contributors_clist
3932   \tl_clear:N \l__document_structure_omgroup_srccite_tl
3933   \tl_clear:N \l__document_structure_omgroup_type_tl
3934   \tl_clear:N \l__document_structure_omgroup_short_tl
3935   \tl_clear:N \l__document_structure_omgroup_display_tl
3936   \tl_clear:N \l__document_structure_omgroup_intro_tl
3937   \bool_set_false:N \l__document_structure_omgroup_loadmodules_bool
3938   \keys_set:nn { document-structure / omgroup } { #1 }
3939 }

```

we define a switch for numbering lines and a hook for the beginning of groups: The \at@begin@omgroup macro allows customization. It is run at the beginning of the omgroup, i.e. after the section heading.

```

3940 \newif\if@mainmatter\@mainmattertrue
3941 \newcommand\at@begin@omgroup[3] [] {}

```

Then we define a helper macro that takes care of the sectioning magic. It comes with its own key/value interface for customization.

```

3942 \keys_define:nn { document-structure / sectioning }{
3943   name .str_set_x:N = \l__document_structure_sect_name_str ,
3944   ref .str_set_x:N = \l__document_structure_sect_ref_str ,
3945   clear .bool_set:N = \l__document_structure_sect_clear_bool ,
3946   num .bool_set:N = \l__document_structure_sect_num_bool ,
3947 }

```

```

3948 \cs_new_protected:Nn \__document_structure_sect_args:n {
3949   \str_clear:N \l__document_structure_sect_name_str
3950   \str_clear:N \l__document_structure_sect_ref_str
3951   \bool_set_false:N \l__document_structure_sect_clear_bool
3952   \bool_set_false:N \l__document_structure_sect_num_bool
3953   \keys_set:nn { document-structure / sectioning } { #1 }
3954 }
3955 \newcommand\omdoc@sectioning[3][]{
3956   \__document_structure_sect_args:n {#1}
3957   \let\omdoc@sect@name\l__document_structure_sect_name_str
3958   \bool_if:NT \l__document_structure_sect_clear_bool { \cleardoublepage }
3959   \if@mainmatter% numbering not overridden by frontmatter, etc.
3960     \bool_if:NTF \l__document_structure_sect_num_bool {
3961       \omgroup@num{#2}{#3}
3962     }{
3963       \omgroup@nonum{#2}{#3}
3964     }
3965     \def\current@section@level{\omdoc@sect@name}
3966   \else
3967     \omgroup@nonum{#2}{#3}
3968   \fi
3969 }% if@mainmatter

```

and another one, if redefines the `\addtocontentsline` macro of L<sup>A</sup>T<sub>E</sub>X to import the respective macros. It takes as an argument a list of module names.

```

3970 \newcommand\omgroup@redefine@addtocontents[1]{%
3971   %\edef\__document_structureimport{#1}%
3972   %\@for\@I:=\__document_structureimport\do{%
3973     %\edef\@path{\csname module@\@I @path\endcsname}%
3974     %\@ifundefined{tf@toc}\relax%
3975     % {\protected@write\tf@toc}{\string\@requiremodules{\@path}}}%
3976   %\ifx\hyper@anchor\@undefined% hyperref.sty loaded?
3977   %\def\addcontentsline##1##2##3{%
3978     %\addtocontents{##1}{\protect\contentsline{##2}{\string\withusedmodules{#1}{##3}}{\thepage}}%
3979   %\else% hyperref.sty not loaded
3980   %\def\addcontentsline##1##2##3{%
3981     %\addtocontents{##1}{\protect\contentsline{##2}{\string\withusedmodules{#1}{##3}}{\thepage}}%
3982   %\fi
3983 }% hyperref.sty loaded?

```

now the `omgroup` environment itself. This takes care of the table of contents via the helper macro above and then selects the appropriate sectioning command from `article.cls`. It also registers the current level of `omgroups` in the `\omgroup@level` counter.

```

3984 \int_new:N \l_document_structure_omgroup_level_int
3985 \newenvironment{omgroup}[2][]{% keys, title
3986 {
3987   \__document_structure_omgroup_args:n { #1 }%\sref@target%

```

If the `loadmodules` key is set on `\begin{omgroup}`, we redefine the `\addcontetsline` macro that determines how the sectioning commands below construct the entries for the table of contents.

```

3988 \bool_if:NT \l__document_structure_omgroup_loadmodules_bool {
3989   \omgroup@redefine@addtocontents{
3990     %\@ifundefined{module@id}\used@modules%
3991     %{\@ifundefined{module@\module@id @path}{\used@modules}\module@id}

```

```

3992     }
3993 }

```

now we only need to construct the right sectioning depending on the value of `\section@level`.

```

3994 \int_incr:N \l_document_structure_omgroup_level_int
3995 \int_incr:N \l_document_structure_section_level_int
3996 \ifcase\l_document_structure_section_level_int
3997   \or\omdoc@sectioning[name=\omdoc@part@kw,clear,num]{part}{#2}
3998   \or\omdoc@sectioning[name=\omdoc@chapter@kw,clear,num]{chapter}{#2}
3999   \or\omdoc@sectioning[name=\omdoc@section@kw,num]{section}{#2}
4000   \or\omdoc@sectioning[name=\omdoc@subsection@kw,num]{subsection}{#2}
4001   \or\omdoc@sectioning[name=\omdoc@subsubsection@kw,num]{subsubsection}{#2}
4002   \or\omdoc@sectioning[name=\omdoc@paragraph@kw,ref=this \omdoc@paragraph@kw]{paragraph}{#2}
4003   \or\omdoc@sectioning[name=\omdoc@subparagraph@kw,ref=this \omdoc@subparagraph@kw]{subparagraph}{#2}

4006 \stex_ref_new_doc_target:n\l__document_structure_omgroup_id_str
4007 }% for customization
4008 {}

```

and finally, we localize the sections

```

4009 \newcommand\omdoc@part@kw{Part}
4010 \newcommand\omdoc@chapter@kw{Chapter}
4011 \newcommand\omdoc@section@kw{Section}
4012 \newcommand\omdoc@subsection@kw{Subsection}
4013 \newcommand\omdoc@subsubsection@kw{Subsubsection}
4014 \newcommand\omdoc@paragraph@kw{paragraph}
4015 \newcommand\omdoc@subparagraph@kw{subparagraph}

```

## 31.7 Front and Backmatter

Index markup is provided by the `omtext` package [Koh20c], so in the `omdoc` package we only need to supply the corresponding `\printindex` command, if it is not already defined

`\printindex`

```

4016 \providecommand\printindex{\IfFileExists{\jobname.ind}{\input{\jobname.ind}}{}}

```

(End definition for `\printindex`. This function is documented on page ??.)

some classes (e.g. `book.cls`) already have `\frontmatter`, `\mainmatter`, and `\backmatter` macros. As we want to define `frontmatter` and `backmatter` environments, we save their behavior (possibly defining it) in `orig@*matter` macros and make them undefined (so that we can define the environments).

```

4017 \cs_if_exist:NTF\frontmatter{
4018   \let\__document_structure_orig_frontmatter\frontmatter
4019   \let\frontmatter\relax
4020 }{
4021   \tl_set:Nn\__document_structure_orig_frontmatter{
4022     \clearpage
4023     \@mainmatterfalse
4024     \pagenumbering{roman}
4025   }
4026 }
4027 \cs_if_exist:NTF\backmatter{

```

```

4028 \let\__document_structure_orig_backmatter\backmatter
4029 \let\backmatter\relax
4030 }{
4031 \tl_set:Nn\__document_structure_orig_backmatter{
4032 \clearpage
4033 \@mainmatterfalse
4034 \pagenumbering{roman}
4035 }
4036 }

```

Using these, we can now define the `frontmatter` and `backmatter` environments

**frontmatter** we use the `\orig@frontmatter` macro defined above and `\mainmatter` if it exists, otherwise we define it.

```

4037 \newenvironment{frontmatter}{
4038 \__document_structure_orig_frontmatter
4039 }{
4040 \cs_if_exist:NTF\mainmatter{
4041 \mainmatter
4042 }{
4043 \clearpage
4044 \@mainmattertrue
4045 \pagenumbering{arabic}
4046 }
4047 }

```

**backmatter** As `backmatter` is at the end of the document, we do nothing for `\endbackmatter`.

```

4048 \newenvironment{backmatter}{
4049 \__document_structure_orig_backmatter
4050 }{
4051 \cs_if_exist:NTF\mainmatter{
4052 \mainmatter
4053 }{
4054 \clearpage
4055 \@mainmattertrue
4056 \pagenumbering{arabic}
4057 }
4058 }

```

finally, we make sure that page numbering is arabic and we have main matter as the default

```

4059 \@mainmattertrue\pagenumbering{arabic}

```

**\prematurestop** We initialize `\afterprematurestop`, and provide `\prematurestop@endomgroup` which looks up `\omgroup@level` and recursively ends enough `{omgroup}`s.

```

4060 \newcommand\afterprematurestop{}
4061 \def\prematurestop@endomgroup{
4062 \int_compare:nNf \l_document_structure_omgroup_level_int = 0 {
4063 \end{omgroup}
4064 \int_decr:N \l_document_structure_omgroup_level_int
4065 \prematurestop@endomgroup
4066 }
4067 }
4068 \providecommand\prematurestop{

```

```

4069 \message{Stopping sTeX processing prematurely}
4070 \prematurestop@endomgroup
4071 \afterprematurestop
4072 \end{document}
4073 }

```

*(End definition for \prematurestop. This function is documented on page ??.)*

## 31.8 Global Variables

**\setSGvar** set a global variable

```

4074 \RequirePackage{etoolbox}
4075 \newcommand\setSGvar[1]{\@namedef{sTeX@Gvar@#1}}

```

*(End definition for \setSGvar. This function is documented on page ??.)*

**\useSGvar** use a global variable

```

4076 \newrobustcmd\useSGvar[1]{%
4077   \@ifundefined{sTeX@Gvar@#1}
4078   {\PackageError{omdoc}
4079     {The sTeX Global variable #1 is undefined}
4080     {set it with \protect\setSGvar}}
4081   \@nameuse{sTeX@Gvar@#1}}

```

*(End definition for \useSGvar. This function is documented on page ??.)*

**\ifSGvar** execute something conditionally based on the state of the global variable.

```

4082 \newrobustcmd\ifSGvar[3]{\def\@test{#2}%
4083   \@ifundefined{sTeX@Gvar@#1}
4084   {\PackageError{omdoc}
4085     {The sTeX Global variable #1 is undefined}
4086     {set it with \protect\setSGvar}}
4087   {\expandafter\ifx\csname sTeX@Gvar@#1\endcsname\@test #3\fi}}

```

*(End definition for \ifSGvar. This function is documented on page ??.)*

## Chapter 32

# MiKoSlides – Implementation

### 32.1 Class and Package Options

We define some Package Options and switches for the `mikoslides` class and activate them by passing them on to `beamer.cls` and `omdoc.cls` and the `mikoslides` package. We pass the `nontheorem` option to the `statements` package when we are not in notes mode, since the `beamer` package has its own (overlay-aware) theorem environments.

```
4088 \*cls)
4089 \@@=mikoslides)
4090 \ProvidesExplClass{mikoslides}{2020/12/06}{1.3}{MiKo slides Class}
4091 \RequirePackage{l3keys2e,expl-keystr-compat}
4092
4093 \keys_define:nn{mikoslides / cls}{
4094   class .code:n = {
4095     \PassOptionsToClass{\CurrentOption}{omdoc}
4096     \str_if_eq:nnT{#1}{book}{
4097       \PassOptionsToPackage{defaulttopsec=part}{mikoslides}
4098     }
4099     \str_if_eq:nnT{#1}{report}{
4100       \PassOptionsToPackage{defaulttopsec=part}{mikoslides}
4101     }
4102   },
4103   notes .bool_set:N = \c__mikoslides_notes_bool ,
4104   slides .code:n = { \bool_set_false:N \c__mikoslides_notes_bool },
4105   unknown .code:n = {
4106     \PassOptionsToClass{\CurrentOption}{omdoc}
4107     \PassOptionsToClass{\CurrentOption}{beamer}
4108     \PassOptionsToPackage{\CurrentOption}{mikoslides}
4109   }
4110 }
4111 \ProcessKeysOptions{ mikoslides / cls }
4112 \bool_if:NTF \c__mikoslides_notes_bool {
4113   \PassOptionsToPackage{notes=true}{mikoslides}
4114 }{
4115   \PassOptionsToPackage{notes=false}{mikoslides}
4116 }
4117 \</cls)
```

now we do the same for the mikoslides package.

```

4118 <*package>
4119 \ProvidesExplPackage{mikoslides}{2020/12/06}{1.3}{MiKo slides Package}
4120 \RequirePackage{l3keys2e,expl-keystr-compat}
4121
4122 \keys_define:nn{mikoslides / pkg}{
4123   topsect      .str_set_x:N = \c__mikoslides_topsect_str,
4124   defaulttopsect .str_set_x:N = \c__mikoslides_defaulttopsec_str,
4125   notes        .bool_set:N = \c__mikoslides_notes_bool ,
4126   slides        .code:n      = { \bool_set_false:N \c__mikoslides_notes_bool },
4127   sectocframes  .bool_set:N = \c__mikoslides_sectocframes_bool ,
4128   frameimages   .bool_set:N = \c__mikoslides_frameimages_bool ,
4129   fiboxed       .bool_set:N = \c__mikoslides_fiboxed_bool ,
4130   nopproblems   .bool_set:N = \c__mikoslides_nopproblems_bool,
4131   unknown       .code:n      = {
4132     \PassOptionsToClass{\CurrentOption}{stex}
4133     \PassOptionsToClass{\CurrentOption}{tikzinput}
4134   }
4135 }
4136 \ProcessKeysOptions{ mikoslides / pkg }
4137 \newif\ifnotes
4138 \bool_if:NTF \c__mikoslides_notes_bool {
4139   \notesttrue
4140 }{
4141   \notesfalse
4142 }
4143

```

we give ourselves a macro \@@topsect that needs only be evaluated once, so that the \ifdefstring conditionals work below.

```

4144 \str_if_empty:NTF \c__mikoslides_topsect_str {
4145   \str_set_eq:NN \__mikoslidestopsect \c__mikoslides_defaulttopsec_str
4146 }{
4147   \str_set_eq:NN \__mikoslidestopsect \c__mikoslides_topsect_str
4148 }
4149 </package>

```

Depending on the options, we either load the article-based omdoc or the beamer class (and set some counters).

```

4150 <*cls>
4151 \bool_if:NTF \c__mikoslides_notes_bool {
4152   \LoadClass{omdoc}
4153 }{
4154   \LoadClass[10pt,notheorems,xcolor={dvipsnames,svgnames}]{beamer}
4155   \newcounter{Item}
4156   \newcounter{paragraph}
4157   \newcounter{subparagraph}
4158   \newcounter{Hfootnote}
4159   \RequirePackage{omdoc}
4160 }

```

now it only remains to load the mikoslides package that does all the rest.

```

4161 \RequirePackage{mikoslides}
4162 </cls>

```

In `notes` mode, we also have to make the `beamer`-specific things available to `article` via the `beamerarticle` package. We use options to avoid loading theorem-like environments, since we want to use our own from the `STEX` packages. The first batch of packages we want are loaded on `mikoslides.sty`. These are the general ones, we will load the `STEX`-specific ones after we have done some work (e.g. defined the counters `m*`). Only the `stex-logo` package is already needed now for the default theme.

```

4163 \*package>
4164 \bool_if:NT \c__mikoslides_notes_bool {
4165   \RequirePackage{a4wide}
4166   \RequirePackage{marginnote}
4167   \PassOptionsToPackage{usenames,dvipsnames,svgnames}{xcolor}
4168   \RequirePackage{mdframed}
4169   \RequirePackage[noxcolor,noamsthm]{beamerarticle}
4170   \RequirePackage[bookmarks,bookmarksopen,bookmarksnumbered,breaklinks,hidelinks]{hyperref}
4171 }
4172 \RequirePackage{stex-compatibility}
4173 \RequirePackage{stex-tikzinput}
4174 \RequirePackage{etoolbox}
4175 \RequirePackage{amssymb}
4176 \RequirePackage{amsmath}
4177 \RequirePackage{comment}
4178 \RequirePackage{textcomp}
4179 \RequirePackage{url}
4180 \RequirePackage{graphicx}
4181 \RequirePackage{pgf}

```

## 32.2 Notes and Slides

For the lecture notes cases, we also provide the `\usetheme` macro that would otherwise come from the `beamer` class. While the latter loads `beamertheme<theme>.sty`, the notes version loads `beamernotestheme<theme>.sty`.<sup>17</sup>

```

4182 \bool_if:NT \c__mikoslides_notes_bool {
4183   \renewcommand\usetheme[2] [] {\usepackage[#1]{beamernotestheme#2}}
4184 }

```

We define the sizes of slides in the notes. Somehow, we cannot get by with the same here.

```

4185 \newcounter{slide}
4186 \newlength{\slidewidth}\setlength{\slidewidth}{13.5cm}
4187 \newlength{\slideheight}\setlength{\slideheight}{9cm}

```

**note** The `note` environment is used to leave out text in the `slides` mode. It does not have a counterpart in OMDoc. So for course notes, we define the `note` environment to be a no-operation otherwise we declare the `note` environment as a comment via the `comment` package.

```

4188 \bool_if:NTF \c__mikoslides_notes_bool {
4189   \renewenvironment{note}{\ignorespaces}{\ignorespaces}{}
4190 }{
4191   \excludecomment{note}
4192 }

```

---

<sup>17</sup>EDNOTE: MK: This is not ideal, but I am not sure that I want to be able to provide the full theme functionality there.

We first set up the slide boxes in `article` mode. We set up sizes and provide a box register for the frames and a counter for the slides.

```
4193 \bool_if:NT \c__mikoslides_notes_bool {
4194   \newlength{\slideframewidth}
4195   \setlength{\slideframewidth}{1.5pt}
```

**frame** We first define the keys.

```
4196 \cs_new_protected:Nn \__mikoslides_do_yes_param:Nn {
4197   \exp_args:Nx \str_if_eq:nnTF { \str_uppercase:n{ #2 } }{ yes }{
4198     \bool_set_true:N #1
4199   }{
4200     \bool_set_false:N #1
4201   }
4202 }
4203 \keys_define:nn{mikoslides / frame}{
4204   label .str_set_x:N = \l__mikoslides_frame_label_str,
4205   allowframebreaks .code:n = {
4206     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_allowframebreaks_bool { #1 }
4207   },
4208   allowdisplaybreaks .code:n = {
4209     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_allowdisplaybreaks_bool { #1 }
4210   },
4211   fragile .code:n = {
4212     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_fragile_bool { #1 }
4213   },
4214   shrink .code:n = {
4215     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_shrink_bool { #1 }
4216   },
4217   squeeze .code:n = {
4218     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_squeeze_bool { #1 }
4219   },
4220   t .code:n = {
4221     \__mikoslides_do_yes_param:Nn \l__mikoslides_frame_t_bool { #1 }
4222   },
4223 }
4224 \cs_new_protected:Nn \__mikoslides_frame_args:n {
4225   \str_clear:N \l__mikoslides_frame_label_str
4226   \bool_set_true:N \l__mikoslides_frame_allowframebreaks_bool
4227   \bool_set_true:N \l__mikoslides_frame_allowdisplaybreaks_bool
4228   \bool_set_true:N \l__mikoslides_frame_fragile_bool
4229   \bool_set_true:N \l__mikoslides_frame_shrink_bool
4230   \bool_set_true:N \l__mikoslides_frame_squeeze_bool
4231   \bool_set_true:N \l__mikoslides_frame_t_bool
4232   \keys_set:nn { mikoslides / frame }{ #1 }
4233 }
```

We define the environment, read them, and construct the slide number and label.

```
4234 \renewenvironment{frame}[1][]{
4235   \__mikoslides_frame_args:n{#1}
4236   \sffamily
4237   \stepcounter{slide}
4238   \def\@currentlabel{\theslide}
4239   \str_if_empty:NF \l__mikoslides_frame_label_str {
4240     \label{\l__mikoslides_frame_label_str}
```

```
4241 }
```

We redefine the `itemize` environment so that it looks more like the one in `beamer`.

```
4242 \def\itemize@level{outer}
4243 \def\itemize@outer{outer}
4244 \def\itemize@inner{inner}
4245 \renewcommand\newpage{\addtocounter{framenum}{1}}
4246 \newcommand\metakeys@show@keys[2]{\marginnote{\scriptsize ##2}}
4247 \renewenvironment{itemize}{
4248   \ifx\itemize@level\itemize@outer
4249     \def\itemize@label{\$ \rhd$}
4250   \fi
4251   \ifx\itemize@level\itemize@inner
4252     \def\itemize@label{\$ \scriptstyle \rhd$}
4253   \fi
4254   \begin{list}
4255     {\itemize@label}
4256     {\setlength{\labelsep}{.3em}
4257      \setlength{\labelwidth}{.5em}
4258      \setlength{\leftmargin}{1.5em}
4259     }
4260   \edef\itemize@level{\itemize@inner}
4261 }{
4262   \end{list}
4263 }
```

We create the box with the `mdframed` environment from the `equinymous` package.

```
4264 \begin{mdframed}[linewidth=\slideframewidth,skipabove=1ex,skipbelow=1ex,userdefinedwidth]
4265 }{
4266   \medskip\miko@slidelabel\end{mdframed}
4267 }
```

Now, we need to redefine the `frametitle` (we are still in course notes mode).

`\frametitle`

```
4268 \renewcommand{\frametitle}[1]{\Large\bf\sf\color{blue}{#1}}\medskip
4269 }
```

*(End definition for \frametitle. This function is documented on page ??.)*

EdN:18

`\pause` 18

```
4270 \bool_if:NT \c__mikoslides_notes_bool {
4271   \newcommand\pause{}
4272 }
```

*(End definition for \pause. This function is documented on page ??.)*

`nomtext`

```
4273 \bool_if:NTF \c__mikoslides_notes_bool {
4274   \newenvironment{nomtext}[1][\begin{omtext}{#1}]{\end{omtext}}
4275 }{
4276   \excludecomment{nomtext}
4277 }
```

---

<sup>18</sup>EdNOTE: MK: fake it in notes mode for now

nomgroup

```
4278 \bool_if:NTF \c__mikoslides_notes_bool {  
4279   \newenvironment{nomgroup}[2] [] {\begin{omgroup}[#1]{#2}}{\end{omgroup}}  
4280 }{  
4281   \excludecomment{nomgroup}  
4282 }
```

ndefinition

```
4283 \bool_if:NTF \c__mikoslides_notes_bool {  
4284   \newenvironment{ndefinition}[1] [] {\begin{definition}[#1]}{\end{definition}}  
4285 }{  
4286   \excludecomment{ndefinition}  
4287 }
```

nassertion

```
4288 \bool_if:NTF \c__mikoslides_notes_bool {  
4289   \newenvironment{nassertion}[1] [] {\begin{assertion}[#1]}{\end{assertion}}  
4290 }{  
4291   \excludecomment{nassertion}  
4292 }
```

nsproof

```
4293 \bool_if:NTF \c__mikoslides_notes_bool {  
4294   \newenvironment{nsproof}[2] [] {\begin{sproof}[#1]{#2}}{\end{sproof}}  
4295 }{  
4296   \excludecomment{nsproof}  
4297 }
```

nexample

```
4298 \bool_if:NTF \c__mikoslides_notes_bool {  
4299   \newenvironment{nexample}[1] [] {\begin{example}[#1]}{\end{example}}  
4300 }{  
4301   \excludecomment{nexample}  
4302 }
```

\inputref@\*skip We customize the hooks for in \inputref.

```
4303 \def\inputref@preskip{\smallskip}  
4304 \def\inputref@postskip{\medskip}
```

(End definition for \inputref@\*skip. This function is documented on page ??.)

\inputref\*

```
4305 \let\orig@inputref\inputref  
4306 \def\inputref{\@ifstar\ninputref\orig@inputref}  
4307 \newcommand\ninputref[2] [] {  
4308   \bool_if:NT \c__mikoslides_notes_bool {  
4309     \orig@inputref[#1]{#2}  
4310   }  
4311 }
```

(End definition for \inputref\*. This function is documented on page ??.)

## 32.3 Header and Footer Lines

Now, we set up the infrastructure for the footer line of the slides, we use boxes for the logos, so that they are only loaded once, that considerably speeds up processing.

**\setslidelogo** The default logo is the  $\text{\TeX}$  logo. Customization can be done by `\setslidelogo{<logo name>}`.

```

4312 \newlength{\slidelogoheight}
4313
4314 \bool_if:NTF \c__mikoslides_notes_bool {
4315   \setlength{\slidelogoheight}{.4cm}
4316 }{
4317   \setlength{\slidelogoheight}{1cm}
4318 }
4319 \newsavebox{\slidelogo}
4320 \sbox{\slidelogo}{\text{\TeX}}
4321 \newrobustcmd{\setslidelogo}[1]{
4322   \sbox{\slidelogo}{\includegraphics[height=\slidelogoheight]{#1}}
4323 }
```

(End definition for `\setslidelogo`. This function is documented on page ??.)

**\setsource** `\source` stores the writer's name. By default it is *Michael Kohlhase* since he is the main user and designer of this package. `\setsource{<name>}` can change the writer's name.

```

4324 \def\source{Michael Kohlhase}% customize locally
4325 \newrobustcmd{\setsource}[1]{\def\source{#1}}
```

(End definition for `\setsource`. This function is documented on page ??.)

**\setlicensing** Now, we set up the copyright and licensing. By default we use the Creative Commons Attribution-ShareAlike license to strengthen the public domain. If package `hyperref` is loaded, then we can attach a hyperlink to the license logo. `\setlicensing[<url>]{<logo name>}` is used for customization, where `<url>` is optional.

```

4326 \def\copyrightnotice{\footnotesize\copyright : \hspace{.3ex}{\source}}
4327 \newsavebox{\cclogo}
4328 \sbox{\cclogo}{\includegraphics[height=\slidelogoheight]{cc_somerights}}
4329 \newif\ifcchref\cchreffalse
4330 \AtBeginDocument{
4331   \ifpackageloaded{hyperref}{\cchreftrue}{\cchreffalse}
4332 }
4333 \def\licensing{
4334   \ifcchref
4335     \href{http://creativecommons.org/licenses/by-sa/2.5/}{\usebox{\cclogo}}
4336   \else
4337     {\usebox{\cclogo}}
4338   \fi
4339 }
4340 \newrobustcmd{\setlicensing}[2][]{
4341   \def@url{#1}
4342   \sbox{\cclogo}{\includegraphics[height=\slidelogoheight]{#2}}
4343   \ifx@url@empty
4344     \def\licensing{{\usebox{\cclogo}}}
4345   \else
4346     \def\licensing{
```

```

4347     \ifcchref
4348     \href{#1}{\usebox{\cclogo}}
4349   \else
4350   {\usebox{\cclogo}}
4351   \fi
4352 }
4353 \fi
4354 }

```

(End definition for `\setlicensing`. This function is documented on page ??.)

EdN:19

`\slidelabel` Now, we set up the slide label for the article mode.<sup>19</sup>

```

4355 \newrobustcmd\miko@slidelabel{
4356   \vbox to \slidelogoheight{
4357     \vss\hbox to \slidewidth
4358     {\licensing\hfill\copyrightnotice\hfill\arabic{slide}\hfill\usebox{\slidelogo}}
4359   }
4360 }

```

(End definition for `\slidelabel`. This function is documented on page ??.)

## 32.4 Frame Images

`\frameimage` We have to make sure that the width is overwritten, for that we check the `\Gin@ewidth` macro from the `graphicx` package. We also add the `label` key.

```

4361 \def\Gin@mhrepos{}
4362 \define@key{Gin}{mhrepos}{\def\Gin@mhrepos{#1}}
4363 \define@key{Gin}{label}{\def\currentlabel{\arabic{slide}}\label{#1}}
4364 \newrobustcmd\frameimage[2][]{
4365   \stepcounter{slide}
4366   \bool_if:NT \c__mikoslides_frameimages_bool {
4367     \def\Gin@ewidth{}\setkeys{Gin}{#1}
4368     \bool_if:NF \c__mikoslides_notes_bool { \vfill }
4369     \begin{center}
4370       \bool_if:NTF \c__mikoslides_fiboxed_bool {
4371         \fbox{
4372           \ifx\Gin@ewidth\@empty
4373             \ifx\Gin@mhrepos\@empty
4374               \mhgraphics[width=\slidewidth,#1]{#2}
4375             \else
4376               \mhgraphics[width=\slidewidth,#1,mhrepos=\Gin@mhrepos]{#2}
4377             \fi
4378           \else% \Gin@ewidth empty
4379             \ifx\Gin@mhrepos\@empty
4380               \mhgraphics[#1]{#2}
4381             \else
4382               \mhgraphics[#1,mhrepos=\Gin@mhrepos]{#2}
4383             \fi
4384           \fi% \Gin@ewidth empty
4385         }
4386       }{
4387         \ifx\Gin@ewidth\@empty

```

---

<sup>19</sup>EdNOTE: see that we can use the themes for the slides some day. This is all fake.

```

4388         \ifx\Gin@mhrepos\empty
4389             \mhgraphics[width=\slidewidth,#1]{#2}
4390         \else
4391             \mhgraphics[width=\slidewidth,#1,mhrepos=\Gin@mhrepos]{#2}
4392         \fi
4393         \ifx\Gin@mhrepos\empty
4394             \mhgraphics[#1]{#2}
4395         \else
4396             \mhgraphics[#1,mhrepos=\Gin@mhrepos]{#2}
4397         \fi
4398     \fi% Gin@ewidth empty
4399 }
4400 \end{center}
4401 \par\strut\hfill{\footnotesize Slide \arabic{slide}}%
4402 \bool_if:NF \c__mikoslides_notes_bool { \vfill }
4403 }
4404 } % ifmks@sty@frameimages

```

(End definition for `\frameimage`. This function is documented on page ??.)

## 32.5 Colors and Highlighting

We first specify sans serif fonts as the default.

```

4405 \sffamily

```

Now, we set up an infrastructure for highlighting phrases in slides. Note that we use content-oriented macros for highlighting rather than directly using color markup. The first thing to do is to adapt the green so that it is dark enough for most beamers

```

4406 \AddToHook{begindocument}{
4407     \definecolor{green}{rgb}{0,.5,0}
4408     \definecolor{purple}{cmyk}{.3,1,0,.17}
4409 }

```

We customize the `\defemph`, `\symrefemph`, `\compemph`, and `\titleemph` macros with colors. Furthermore we customize the `\__omtextlec` macro for the appearance of line end comments in `\lec`.

```

4410 % \def\STpresent#1{\textcolor{blue}{#1}}
4411 \def\defemph#1{\textcolor{magenta}{#1}}
4412 \def\symrefemph#1{\textcolor{cyan}{#1}}
4413 \def\compemph#1{\textcolor{blue}{#1}}
4414 \def\titleemph#1{\textcolor{blue}{#1}}
4415 \def\__omtext_lec#1(\textcolor{green}{#1})

```

I like to use the dangerous bend symbol for warnings, so we provide it here.

`\textwarning` as the macro can be used quite often we put it into a box register, so that it is only loaded once.

```

4416 \pgfdeclareimage[width=.8em]{miko@small@dbend}{dangerous-bend}
4417 \def\smalltextwarning{
4418     \pgfuseimage{miko@small@dbend}
4419     \xspace
4420 }
4421 \pgfdeclareimage[width=1.2em]{miko@dbend}{dangerous-bend}

```

```

4422 \newrobustcmd\textwarning{
4423   \raisebox{-0.05cm}{\pgfuseimage{miko@dbend}}
4424   \xspace
4425 }
4426 \pgfdeclareimage[width=2.5em]{miko@big@dbend}{dangerous-bend}
4427 \newrobustcmd\bigtextwarning{
4428   \raisebox{-0.05cm}{\pgfuseimage{miko@big@dbend}}
4429   \xspace
4430 }
(End definition for \textwarning. This function is documented on page ??.)
4431 \newrobustcmd\putgraphicsat[3]{
4432   \begin{picture}(0,0)\put(#1){\includegraphics[#2]{#3}}\end{picture}
4433 }
4434 \newrobustcmd\putat[2]{
4435   \begin{picture}(0,0)\put(#1){#2}\end{picture}
4436 }

```

## 32.6 Sectioning

If the `sectocframes` option is set, then we make section frames. We first define counters for `part` and `chapter`, which `beamer.cls` does not have and we make the `section` counter which it does dependent on `chapter`.

```

4437 \bool_if:NT \c__mikoslides_sectocframes_bool {
4438   \str_if_eq:VnTF \__mikoslidestopsect{part}{
4439     \newcounter{chapter}\counterwithin*{section}{chapter}
4440   }{
4441     \str_if_eq:VnT\__mikoslidestopsect{chapter}{
4442       \newcounter{chapter}\counterwithin*{section}{chapter}
4443     }
4444   }
4445 }

```

`\section@level` We set the `\section@level` counter that governs sectioning according to the class options. We also introduce the sectioning counters accordingly.

```

\section@level
4446 \def\part@prefix{}
4447 \@ifpackageloaded{omdoc}{}{
4448   \str_case:VnF \__mikoslidestopsect {
4449     {part}{
4450       \int_set:Nn \l_document_structure_section_level_int {0}
4451       \def\thesection{\arabic{chapter}.\arabic{section}}
4452       \def\part@prefix{\arabic{chapter}.}
4453     }
4454     {chapter}{
4455       \int_set:Nn \l_document_structure_section_level_int {1}
4456       \def\thesection{\arabic{chapter}.\arabic{section}}
4457       \def\part@prefix{\arabic{chapter}.}
4458     }
4459   }{
4460     \int_set:Nn \l_document_structure_section_level_int {2}
4461     \def\part@prefix{}

```

```

4462 }
4463 }
4464
4465 \bool_if:NF \c__mikoslides_notes_bool { % only in slides

```

(End definition for \section@level. This function is documented on page ??.)

The new counters are used in the omgroup environment that choses the L<sup>A</sup>T<sub>E</sub>X sectioning macros according to \section@level.

omgroup

```

4466 \renewenvironment{omgroup}[2][]{
4467   \__document_structure_omgroup_args:n { #1 }

4535   \newenvironment{problems}{}{}
4536 }{
4537   \excludecomment{problems}
4538 }
```

## 32.7 Excursions

`\excursion` The excursion macros are very simple, we define a new internal macro `\excursionref` and use it in `\excursion`, which is just an `\inputref` that checks if the new macro is defined before formatting the file in the argument.

```

4539 \gdef\printexcursions{}
4540 \newcommand\excursionref[2]{% label, text
4541   \bool_if:NT \c__mikoslices_notes_bool {
4542     \begin{omtext}[title=Excursion]
4543       #2 \sref[fallback=the appendix]{#1}.
4544     \end{omtext}
4545   }
4546 }
4547 \newcommand\activate@excursion[2][{}]{
4548   \gappto\printexcursions{\inputref[#1]{#2}}
```

```

4549 }
4550 \newcommand\excursion[4][{}]{% repos, label, path, text
4551   \bool_if:NT \c__mikoslides_notes_bool {
4552     \activate@excursion[#1]{#3}\excursionref{#2}{#4}
4553   }
4554 }

```

(End definition for \excursion. This function is documented on page ??.)

## \excursiongroup

```

4555 \keys_define:nn{mikoslides / excursiongroup }{
4556   id          .str_set_x:N = \l__mikoslides_excursion_id_str,
4557   intro       .tl_set:N   = \l__mikoslides_excursion_intro_tl,
4558   mhrepos     .str_set_x:N = \l__mikoslides_excursion_mhrepos_str
4559 }
4560 \cs_new_protected:Nn \__mikoslides_excursion_args:n {
4561   \tl_clear:N \l__mikoslides_excursion_intro_tl
4562   \str_clear:N \l__mikoslides_excursion_id_str
4563   \str_clear:N \l__mikoslides_excursion_mhrepos_str
4564   \keys_set:nn {mikoslides / excursiongroup }{ #1 }
4565 }
4566 \newcommand\excursiongroup[1][{}]{
4567   \__mikoslides_excursion_args:n{ #1 }
4568   \ifdefempty\printexcursions{}% only if there are excursions
4569   {\begin{note}
4570     \begin{omgroup}[#1]{Excursions}%
4571       \ifdefempty\l__mikoslides_excursion_intro_tl{{
4572         \inputref[\l__mikoslides_excursion_mhrepos_str]{
4573           \l__mikoslides_excursion_intro_tl
4574         }
4575       }
4576       \printexcursions%
4577     \end{omgroup}
4578   \end{note}}
4579 }
4580 \end{package}

```

(End definition for \excursiongroup. This function is documented on page ??.)

## Chapter 33

# The Implementation

### 33.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. They all come with their own conditionals that are set by the options.

```
4581 <*package>
4582 <@@=problems>
4583 \ProvidesExplPackage{problem}{2019/03/20}{1.3}{Semantic Markup for Problems}
4584 \RequirePackage{l3keys2e,expl-keystr-compatible}
4585
4586 \keys_define:nn { problem / pkg }{
4587   notes      .default:n    = { true },
4588   notes      .bool_set:N   = \c__problems_notes_bool,
4589   gnotes     .default:n    = { true },
4590   gnotes     .bool_set:N   = \c__problems_gnotes_bool,
4591   hints      .default:n    = { true },
4592   hints      .bool_set:N   = \c__problems_hints_bool,
4593   solutions  .default:n    = { true },
4594   solutions  .bool_set:N   = \c__problems_solutions_bool,
4595   pts        .default:n    = { true },
4596   pts        .bool_set:N   = \c__problems_pts_bool,
4597   min        .default:n    = { true },
4598   min        .bool_set:N   = \c__problems_min_bool,
4599   boxed      .default:n    = { true },
4600   boxed      .bool_set:N   = \c__problems_boxed_bool,
4601   unknown    .code:n       = {}
4602 }
4603 \def\solutionstrue{
4604   \bool_set_true:N \c__problems_solutions_bool
4605 }
4606 \def\solutionsfalse{
4607   \bool_set_false:N \c__problems_solutions_bool
4608 }
4609
4610 \ProcessKeysOptions{ problem / pkg }
```

Then we make sure that the necessary packages are loaded (in the right versions).

```

4611 \RequirePackage{stex-compatibility}
4612 \RequirePackage{comment}

```

The next package relies on the L<sup>A</sup>T<sub>E</sub>X3 kernel, which L<sup>A</sup>T<sub>E</sub>XML only partially supports. As it is purely presentational, we only load it when the `boxed` option is given and we run L<sup>A</sup>T<sub>E</sub>XML.

```

4613 \bool_if:NT \c__problems_boxed_bool { \RequirePackage{mdframed} }

```

`\prob@*@kw` For multilinguality, we define internal macros for keywords that can be specialized in `*.ldf` files.

```

4614 \def\prob@problem@kw{Problem}
4615 \def\prob@solution@kw{Solution}
4616 \def\prob@hint@kw{Hint}
4617 \def\prob@note@kw{Note}
4618 \def\prob@gnote@kw{Grading}
4619 \def\prob@pt@kw{pt}
4620 \def\prob@min@kw{min}

```

(End definition for `\prob@*@kw`. This function is documented on page ??.)

For the other languages, we set up triggers

```

4621 \@ifpackageloaded{babel}{
4622   \clist_set:Nx \l_tmpa_clist {\bbl@loaded}
4623   \clist_if_in:NnT \l_tmpa_clist {ngerman}{
4624     \input{problem-ngerman.ldf}
4625   }
4626   \clist_if_in:NnT \l_tmpa_clist {finnish}{
4627     \input{problem-finnish.ldf}
4628   }
4629   \clist_if_in:NnT \l_tmpa_clist {french}{
4630     \input{problem-french.ldf}
4631   }
4632   \clist_if_in:NnT \l_tmpa_clist {russian}{
4633     \input{problem-russian.ldf}
4634   }
4635 }{}

```

## 33.2 Problems and Solutions

We now prepare the KeyVal support for problems. The key macros just set appropriate internal macros.

```

4636 \keys_define:nn{ problem / problem }{
4637   id      .str_set:x:N = \l__problems_prob_id_str,
4638   pts     .tl_set:N    = \l__problems_prob_pts_tl,
4639   min     .tl_set:N    = \l__problems_prob_min_tl,
4640   title   .tl_set:N    = \l__problems_prob_title_tl,
4641   refnum  .int_set:N   = \l__problems_prob_refnum_int
4642 }
4643 \cs_new_protected:Nn \__problems_prob_args:n {
4644   \str_clear:N \l__problems_prob_id_str
4645   \tl_clear:N \l__problems_prob_pts_tl
4646   \tl_clear:N \l__problems_prob_min_tl
4647   \tl_clear:N \l__problems_prob_title_tl

```

```

4648 \int_zero_new:N \l__problems_prob_refnum_int
4649 \keys_set:nn { problem / problem }{ #1 }
4650 \int_compare:nNnT \l__problems_prob_refnum_int = 0 {
4651   \let\l__problems_inclprob_refnum_int\undefined
4652 }
4653 }

```

Then we set up a counter for problems.

`\numberproblemsin`

```

4654 \newcounter{problem}
4655 \newcommand\numberproblemsin[1]{\@addtoreset{problem}{#1}}

```

(End definition for `\numberproblemsin`. This function is documented on page ??.)

`\prob@label` We provide the macro `\prob@label` to redefine later to get context involved.

```

4656 \newcommand\prob@label[1]{#1}

```

(End definition for `\prob@label`. This function is documented on page ??.)

`\prob@number` We consolidate the problem number into a reusable internal macro

```

4657 \newcommand\prob@number{
4658   \int_if_exist:NTF \l__problems_inclprob_refnum_int {
4659     \prob@label{\int_use:N \l__problems_inclprob_refnum_int }
4660   }{
4661     \int_if_exist:NTF \l__problems_prob_refnum_int {
4662       \prob@label{\int_use:N \l__problems_prob_refnum_int }
4663     }{
4664       \prob@label\theproblem
4665     }
4666   }
4667 }

```

(End definition for `\prob@number`. This function is documented on page ??.)

`\prob@title` We consolidate the problem title into a reusable internal macro as well. `\prob@title` takes three arguments the first is the fallback when no title is given at all, the second and third go around the title, if one is given.

```

4668 \newcommand\prob@title[3]{%
4669   \tl_if_exist:NTF \l__problems_inclprob_title_tl {
4670     #2 \l__problems_inclprob_title_tl #3
4671   }{
4672     \tl_if_exist:NTF \l__problems_prob_title_tl {
4673       #2 \l__problems_prob_title_tl #3
4674     }{
4675       #1
4676     }
4677   }
4678 }

```

(End definition for `\prob@title`. This function is documented on page ??.)

With these the problem header is a one-liner

`\prob@heading` We consolidate the problem header line into a separate internal macro that can be reused in various settings.

```

4679 \def\prob@heading{
4680   \prob@problem@kw~\prob@number\prob@title{~}{~}{~}\strut}
4681   %\sref@label@id{\prob@problem@kw~\prob@number}{~}
4682 }

```

(End definition for `\prob@heading`. This function is documented on page ??.)

With this in place, we can now define the `problem` environment. It comes in two shapes, depending on whether we are in boxed mode or not. In both cases we increment the problem number and output the points and minutes (depending) on whether the respective options are set.

`problem`

```

4683 \newenvironment{problem}[1][1]{
4684   \_problems_prob_args:n{#1}%\sref@target%
4685   \@in@omtexttrue% we are in a statement (for inline definitions)
4686   \stepcounter{problem}\record@problem
4687   \def\current@section@level{\prob@problem@kw}
4688   \par\noindent\textbf{\prob@heading\show@pts\show@min\\ignorespacesandpars
4689 }%
4690   {\smallskip}
4691   \bool_if:NT \c__problems_boxed_bool {
4692     \surroundwithmdframed{problem}
4693   }

```

`\record@problem` This macro records information about the problems in the `*.aux` file.

```

4694 \def\record@problem{
4695   \protected@write\@auxout{}
4696   {
4697     \string\@problem{\prob@number}
4698     {
4699       \tl_if_exist:NTF \l__problems_inclprob_pts_tl {
4700         \l__problems_inclprob_pts_tl
4701       }{
4702         \l__problems_prob_pts_tl
4703       }
4704     }%
4705     {
4706       \tl_if_exist:NTF \l__problems_inclprob_min_tl {
4707         \l__problems_inclprob_min_tl
4708       }{
4709         \l__problems_prob_min_tl
4710       }
4711     }
4712   }
4713 }

```

(End definition for `\record@problem`. This function is documented on page ??.)

`\@problem` This macro acts on a problem's record in the `*.aux` file. It does not have any functionality here, but can be redefined elsewhere (e.g. in the `assignment` package).

```

4714 \def\@problem#1#2#3{}

```

(End definition for \@problem. This function is documented on page ??.)

**solution** The `solution` environment is similar to the `problem` environment, only that it is independent of the boxed mode. It also has it's own keys that we need to define first.

```

4715 \keys_define:nn { problem / solution }{
4716   id          .str_set_x:N = \l__problems_solution_id_str ,
4717   for         .tl_set:N    = \l__problems_solution_for_tl ,
4718   height      .dim_set:N   = \l__problems_solution_height_dim ,
4719   creators    .clist_set:N = \l__problems_solution_creators_clist ,
4720   contributors .clist_set:N = \l__problems_solution_contributors_clist ,
4721   srccite     .tl_set:N    = \l__problems_solution_srccite_tl
4722 }
4723 \cs_new_protected:Nn \__problems_solution_args:n {
4724   \str_clear:N \l__problems_solution_id_str
4725   \tl_clear:N \l__problems_solution_for_tl
4726   \tl_clear:N \l__problems_solution_srccite_tl
4727   \clist_clear:N \l__problems_solution_creators_clist
4728   \clist_clear:N \l__problems_solution_contributors_clist
4729   \dim_zero:N \l__problems_solution_height_dim
4730   \keys_set:nn { problem / solution }{ #1 }
4731 }

```

the next step is to define a helper macro that does what is needed to start a solution.

```

4732 \newcommand\@startsolution[1][ ]{
4733   \__problems_solution_args:n { #1 }
4734   \@in@omtexttrue% we are in a statement.
4735   \bool_if:NF \c__problems_boxed_bool { \hrule }
4736   \smallskip\noindent
4737   {\textbf\prob@solution@kw : \enspace}
4738   \begin{small}
4739   \def\current@section@level{\prob@solution@kw}
4740   \ignorespacesandpars
4741 }

```

**\startsolutions** for the `\startsolutions` macro we use the `\specialcomment` macro from the `comment` package. Note that we use the `\@startsolution` macro in the start codes, that parses the optional argument.

```

4742 \newcommand\startsolutions{
4743   \specialcomment{solution}{\@startsolution}{
4744     \bool_if:NF \c__problems_boxed_bool {
4745       \hrule\medskip
4746     }
4747     \end{small}%
4748   }
4749   \bool_if:NT \c__problems_boxed_bool {
4750     \surroundwithmdframed{solution}
4751   }
4752 }

```

(End definition for \startsolutions. This function is documented on page ??.)

**\stopsolutions**

```

4753 \newcommand\stopsolutions{\excludecomment{solution}}

```

(End definition for \stopsolutions. This function is documented on page ??.)

so it only remains to start/stop solutions depending on what option was specified.

```

4754 \bool_if:NTF \c__problems_solutions_bool {
4755   \startsolutions
4756 }{
4757   \stopsolutions
4758 }

```

**exnote**

```

4759 \bool_if:NTF \c__problems_notes_bool {

4848    }
4849  }
4850 } %solutions

```

(End definition for \mcc. This function is documented on page ??.)

## 33.4 Including Problems

`\includeproblem` The `\includeproblem` command is essentially a glorified `\input` statement, it sets some internal macros first that overwrite the local points. Importantly, it resets the `inclprob` keys after the input.

```

4851
4852 \keys_define:nn{ problem / inclproblem }{
4853   % id      .str_set_x:N = \l__problems_inclprob_id_str,
4854   pts      .tl_set:N    = \l__problems_inclprob_pts_tl,
4855   min      .tl_set:N    = \l__problems_inclprob_min_tl,
4856   title    .tl_set:N    = \l__problems_inclprob_title_tl,
4857   refnum   .int_set:N    = \l__problems_inclprob_refnum_int,
4858   mhrepos  .str_set_x:N = \l__problems_inclprob_mhrepos_str
4859 }
4860 \cs_new_protected:Nn \l__problems_inclprob_args:n {
4861   % \str_clear:N \l__problems_prob_id_str
4862   \tl_clear:N \l__problems_inclprob_pts_tl
4863   \tl_clear:N \l__problems_inclprob_min_tl
4864   \tl_clear:N \l__problems_inclprob_title_tl
4865   \int_zero_new:N \l__problems_inclprob_refnum_int
4866   \str_clear:N \l__problems_inclprob_mhrepos_str
4867   \keys_set:nn { problem / inclproblem }{ #1 }
4868   \tl_if_empty:NT \l__problems_inclprob_pts_tl {
4869     \let\l__problems_inclprob_pts_tl\undefined
4870   }
4871   \tl_if_empty:NT \l__problems_inclprob_min_tl {
4872     \let\l__problems_inclprob_min_tl\undefined
4873   }
4874   \tl_if_empty:NT \l__problems_inclprob_title_tl {
4875     \let\l__problems_inclprob_title_tl\undefined
4876   }
4877   \int_compare:nNnT \l__problems_inclprob_refnum_int = 0 {
4878     \let\l__problems_inclprob_refnum_int\undefined
4879   }
4880 }
4881
4882 \cs_new_protected:Nn \l__problems_inclprob_clear: {
4883   % \str_clear:N \l__problems_prob_id_str
4884   \let\l__problems_inclprob_pts_tl\undefined
4885   \let\l__problems_inclprob_min_tl\undefined

```

```

4886 \let\l__problems_inclprob_title_tl\undefined
4887 \let\l__problems_inclprob_refnum_int\undefined
4888 \let\l__problems_inclprob_mhrepos_str\undefined
4889 }
4890
4891 \newcommand\includeproblem[2][]{
4892   \__problems_inclprob_args:n{ #1 }
4893   \str_if_empty:NTF \l__problems_inclprob_mhrepos_str {
4894     \input{#2}
4895   }{
4896     \stex_in_repository:nn{\l__problems_inclprob_mhrepos_str}{
4897       \input{\mhpath{\l__problems_inclprob_mhrepos_str}{#2}}
4898     }
4899   }
4900   \__problems_inclprob_clear:
4901 }

```

(End definition for \includeproblem. This function is documented on page ??.)

## 33.5 Reporting Metadata

For messages it is OK to have them in English as the whole documentation is, and we can therefore assume authors can deal with it.

```

4902 \AddToHook{enddocument}{
4903   \bool_if:NT \c__problems_pts_bool {
4904     \message{Total:~\arabic{pts}~points}
4905   }
4906   \bool_if:NT \c__problems_min_bool {
4907     \message{Total:~\arabic{min}~minutes}
4908   }
4909 }

```

The margin pars are reader-visible, so we need to translate

```

4910 \def\pts#1{
4911   \bool_if:NT \c__problems_pts_bool {
4912     \marginpar{#1~\prob@pt@kw}
4913   }
4914 }
4915 \def\min#1{
4916   \bool_if:NT \c__problems_min_bool {
4917     \marginpar{#1~\prob@min@kw}
4918   }
4919 }

```

**\show@pts** The **\show@pts** shows the points: if no points are given from the outside and also no points are given locally do nothing, else show and add. If there are outside points then we show them in the margin.

```

4920 \newcounter{pts}
4921 \def\show@pts{
4922   \tl_if_exist:NTF \l__problems_inclprob_pts_tl {
4923     \bool_if:NT \c__problems_pts_bool {
4924       \marginpar{\l__problems_inclprob_pts_tl;\prob@pt@kw\smallskip}
4925       \addtocounter{pts}{\l__problems_inclprob_pts_tl}

```

```

4926     }
4927   }{
4928     \tl_if_exist:NT \l__problems_prob_pts_tl {
4929       \bool_if:NT \c__problems_pts_bool {
4930         \marginpar{\l__problems_prob_pts_tl;\prob@pt@kw\smallskip}
4931         \addtocounter{pts}{\l__problems_prob_pts_tl}
4932       }
4933     }
4934   }
4935 }

```

(End definition for \show@pts. This function is documented on page ??.)  
and now the same for the minutes

\show@min

```

4936 \newcounter{min}
4937 \def\show@min{
4938   \tl_if_exist:NTF \l__problems_inclprob_min_tl {
4939     \bool_if:NT \c__problems_min_bool {
4940       \marginpar{\l__problems_inclprob_pts_tl;min}
4941       \addtocounter{min}{\l__problems_inclprob_min_tl}
4942     }
4943   }{
4944     \tl_if_exist:NT \l__problems_prob_min_tl {
4945       \bool_if:NT \c__problems_min_bool {
4946         \marginpar{\l__problems_prob_min_tl;min}
4947         \addtocounter{min}{\l__problems_prob_min_tl}
4948       }
4949     }
4950   }
4951 }
4952 \</package>

```

(End definition for \show@min. This function is documented on page ??.)

## Chapter 34

# Implementation: The hwexam Class

The functionality is spread over the `hwexam` class and package. The class provides the `document` environment and pre-loads some convenience packages, whereas the package provides the concrete functionality.

### 34.1 Class Options

To initialize the `hwexam` class, we declare and process the necessary options by passing them to the respective packages and classes they come from.

```
4953 <@@=hwexam>
4954 <*cls>
4955 \ProvidesExplClass{hwexam}{2019/03/20}{1.1}{homework assignments and exams}
4956 \RequirePackage{l3keys2e,expl-keystr-compatible}
4957 \DeclareOption*{
4958   \PassOptionsToClass{\CurrentOption}{omdoc}
4959   \PassOptionsToPackage{\CurrentOption}{stex}
4960   \PassOptionsToPackage{\CurrentOption}{hwexam}
4961   \PassOptionsToPackage{\CurrentOption}{tikzinput}
4962 }
4963 \ProcessOptions
```

We load `omdoc.cls`, and the desired packages. For the L<sup>A</sup>T<sub>E</sub>XML bindings, we make sure the right packages are loaded.

```
4964 \LoadClass{omdoc}
4965 \RequirePackage{stex}
4966 \RequirePackage{hwexam}
4967 \RequirePackage{tikzinput}
4968 \RequirePackage{graphicx}
4969 \RequirePackage{a4wide}
4970 \RequirePackage{amssymb}
4971 \RequirePackage{amstext}
4972 \RequirePackage{amsmath}
```

Finally, we register another keyword for the `document` environment. We give a default assignment type to prevent errors

```

4973 \newcommand\assig@default@type{\hwexam@assignment@kw}
4974 \def\document@hwexamtype{\assig@default@type}
4975 <@@=document_structure>
4976 \keys_define:nn { document-structure / document }{
4977 id .str_set_x:N = \c_document_structure_document_id_str,
4978 hwexamtype .tl_set:N = \document@hwexamtype
4979 }
4980 <@@=hwexam>
4981 </cls>

```

## Chapter 35

# Implementation: The hwexam Package

### 35.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. Some come with their own conditionals that are set by the options, the rest is just passed on to the `problems` package.

```
4982 \*package>
4983 \ProvidesExplPackage{hwexam}{2019/03/20}{1.1}{homework assignments and exams}
4984 \RequirePackage{l3keys2e,expl-keystr-compat}
4985
4986 \newif\iftest\testfalse
4987 \DeclareOption{test}{\testtrue}
4988 \newif\ifmultiple\multiplefalse
4989 \DeclareOption{multiple}{\multipletrue}
4990 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{problem}}
4991 \ProcessOptions
```

Then we make sure that the necessary packages are loaded (in the right versions).

```
4992 \RequirePackage{keyval}[1997/11/10]
4993 \RequirePackage{problem}
```

`\hwexam@*@kw` For multilinguality, we define internal macros for keywords that can be specialized in `*.ldf` files.

```
4994 \newcommand\hwexam@assignment@kw{Assignment}
4995 \newcommand\hwexam@given@kw{Given}
4996 \newcommand\hwexam@due@kw{Due}
4997 \newcommand\hwexam@testemptypage@kw{This page was intentionally left blank for extra
4998   space}%
4999 \newcommand\correction@probs@kw{prob.}%
5000 \newcommand\correction@pts@kw{total}%
5001 \newcommand\correction@reached@kw{reached}%
5002 \newcommand\correction@sum@kw{Sum}%
5003 \newcommand\correction@grade@kw{grade}%
5004 \newcommand\correction@forgrading@kw{To be used for grading, do not write here}
```

(End definition for \hwexam@\*kw. This function is documented on page ??.)

For the other languages, we set up triggers

```

5005 \@ifpackageloaded{babel}{\RequirePackage[base]{babel}}
5006
5007 \clist_set:Nx \l_tmpa_clist {\bbl@loaded}
5008 \clist_if_in:NnT \l_tmpa_clist {ngerman}{
5009   \input{hwexam-ngerman.ldf}
5010 }
5011 \clist_if_in:NnT \l_tmpa_clist {finnish}{
5012   \input{hwexam-finnish.ldf}
5013 }
5014 \clist_if_in:NnT \l_tmpa_clist {french}{
5015   \input{hwexam-french.ldf}
5016 }
5017 \clist_if_in:NnT \l_tmpa_clist {russian}{
5018   \input{hwexam-russian.ldf}
5019 }

```

## 35.2 Assignments

Then we set up a counter for problems and make the problem counter inherited from `problem.sty` depend on it. Furthermore, we specialize the `\prob@label` macro to take the assignment counter into account.

```

5020 \newcounter{assignment}
5021 \numberproblemsin{assignment}
5022 \renewcommand\prob@label[1]{\arabic{assignment}.#1}

```

We will prepare the keyval support for the `assignment` environment.

```

5023 \keys_define:nn { hwexam / assignment } {
5024   id .str_set:N = \l__hwexam_assign_id_str,
5025   number .int_set:N = \l__hwexam_assign_number_int,
5026   title .tl_set:N = \l__hwexam_assign_title_tl,
5027   type .tl_set:N = \l__hwexam_assign_type_tl,
5028   given .tl_set:N = \l__hwexam_assign_given_tl,
5029   due .tl_set:N = \l__hwexam_assign_due_tl,
5030   loadmodules .code:n = {
5031     \bool_set_true:N \l__hwexam_assign_loadmodules_bool
5032   }
5033 }
5034 \cs_new_protected:Nn \__hwexam_assignment_args:n {
5035   \str_clear:N \l__hwexam_assign_id_str
5036   \int_set:Nn \l__hwexam_assign_number_int {-1}
5037   \tl_clear:N \l__hwexam_assign_title_tl
5038   \tl_clear:N \l__hwexam_assign_type_tl
5039   \tl_clear:N \l__hwexam_assign_given_tl
5040   \tl_clear:N \l__hwexam_assign_due_tl
5041   \bool_set_false:N \l__hwexam_assign_loadmodules_bool
5042   \keys_set:nn { hwexam / assignment }{ #1 }
5043 }

```

The next three macros are intermediate functions that handle the case gracefully, where the respective token registers are undefined.

The `\given@due` macro prints information about the given and due status of the assignment. Its arguments specify the brackets.

```

5044 \newcommand\given@due[2]{
5045 \bool_lazy_all:nF {
5046 { \tl_if_empty_p:V \l__hwexam_inclasssign_given_tl }
5047 { \tl_if_empty_p:V \l__hwexam_assign_given_tl }
5048 { \tl_if_empty_p:V \l__hwexam_inclasssign_due_tl }
5049 { \tl_if_empty_p:V \l__hwexam_assign_due_tl }
5050 }{ #1 }
5051
5052 \tl_if_empty:NTF \l__hwexam_inclasssign_given_tl {
5053 \tl_if_empty:NF \l__hwexam_assign_given_tl {
5054 \hwexam@given@kw\xspace\l__hwexam_assign_given_tl
5055 }
5056 }{
5057 \hwexam@given@kw\xspace\l__hwexam_inclasssign_given_tl
5058 }
5059
5060 \bool_lazy_or:nnF {
5061 \bool_lazy_and_p:nn {
5062 \tl_if_empty_p:V \l__hwexam_inclasssign_due_tl
5063 }{
5064 \tl_if_empty_p:V \l__hwexam_assign_due_tl
5065 }
5066 }{
5067 \bool_lazy_and_p:nn {
5068 \tl_if_empty_p:V \l__hwexam_inclasssign_due_tl
5069 }{
5070 \tl_if_empty_p:V \l__hwexam_assign_due_tl
5071 }
5072 }{ ,~ }
5073
5074 \tl_if_empty:NTF \l__hwexam_inclasssign_due_tl {
5075 \tl_if_empty:NF \l__hwexam_assign_due_tl {
5076 \hwexam@due@kw\xspace \l__hwexam_assign_due_tl
5077 }
5078 }{
5079 \hwexam@due@kw\xspace \l__hwexam_inclasssign_due_tl
5080 }
5081
5082 \bool_lazy_all:nF {
5083 { \tl_if_empty_p:V \l__hwexam_inclasssign_given_tl }
5084 { \tl_if_empty_p:V \l__hwexam_assign_given_tl }
5085 { \tl_if_empty_p:V \l__hwexam_inclasssign_due_tl }
5086 { \tl_if_empty_p:V \l__hwexam_assign_due_tl }
5087 }{ #2 }
5088 }

```

`\assignment@title` This macro prints the title of an assignment, the local title is overwritten, if there is one from the `\inputassignment`. `\assignment@title` takes three arguments the first is the fallback when no title is given at all, the second and third go around the title, if one is given.

```

5089 \newcommand\assignment@title[3]{

```

```

5090 \tl_if_empty:NTF \l__hwexam_inclassassign_title_tl {
5091 \tl_if_empty:NTF \l__hwexam_assign_title_tl {
5092 #1
5093 }{
5094 #2\l__hwexam_assign_title_tl#3
5095 }
5096 }{
5097 #2\l__hwexam_inclassassign_title_tl#3
5098 }
5099 }

```

(End definition for \assignment@title. This function is documented on page ??.)

**\assignment@number** Like \assignment@title only for the number, and no around part.

```

5100 \newcommand\assignment@number{
5101 \int_compare:nNnTF \l__hwexam_inclassassign_number_int = {-1} {
5102 \int_compare:nNnF \l__hwexam_assign_number_int = {-1} {
5103 \int_use:N \l__hwexam_assign_number_int
5104 }
5105 }{
5106 \int_use:N \l__hwexam_inclassassign_number_int
5107 }
5108 }

```

(End definition for \assignment@number. This function is documented on page ??.)

With them, we can define the central **assignment** environment. This has two forms (separated by \ifmultiple) in one we make a title block for an assignment sheet, and in the other we make a section heading and add it to the table of contents. We first define an assignment counter

**assignment** For the assignment environment we delegate the work to the @assignment environment that depends on whether multiple option is given.

```

5109 \newenvironment{assignment}[1][]{
5110 \__hwexam_assignment_args:n { #1 }
5111 %\sref@target
5112 \let\__hwexamnum\l__hwexam_assign_number_int
5113 \int_compare:nNnF \l__hwexam_assign_number_int = {-1} {
5114 \stepcounter{assignment}
5115 }{
5116 \setcounter{assignment}{\int_use:N\__hwexamnum}
5117 }
5118 \setcounter{problem}{0}
5119 \def\current@section@level{\document@hwexamtype}
5120 %\sref@label@id{\document@hwexamtype \thesection}
5121 \begin{@assignment}
5122 }{
5123 \end{@assignment}
5124 }

```

In the multi-assignment case we just use the omdoc environment for suitable sectioning.

```

5125 \def\__hwexasstitle{
5126 \protect\document@hwexamtype~\arabic{assignment}
5127 \assignment@title{}\;{} \; -- \given@due{}{}
5128 }

```

```

5129 \ifmultiple
5130 \newenvironment{@assignment}{
5131 \bool_if:NTF \l__hwexam_assign_loadmodules_bool {
5132 \begin{omgroup}[loadmodules]{\__hwexasstitle}
5133 }{
5134 \begin{omgroup}{\__hwexasstitle}
5135 }
5136 }{
5137 \end{omgroup}
5138 }

```

for the single-page case we make a title block from the same components.

```

5139 \else
5140 \newenvironment{@assignment}{
5141 \begin{center}\bf
5142 \Large\@title\strut\
5143 \document@hwexamtype~\arabic{assignment}\assignment@title{\;}{:};{\;\}
5144 \large\given@due{--\;}{\;}{--}
5145 \end{center}
5146 }{}
5147 \fi% multiple

```

## 35.3 Including Assignments

**\in\*assignment** This macro is essentially a glorified `\include` statement, it just sets some internal macros first that overwrite the local points. Importantly, it resets the `inclassig` keys after the input.

```

5148 \keys_define:nn { hwexam / inclassignment } {
5149 %id .str_set_x:N = \l__hwexam_assign_id_str,
5150 number .int_set:N = \l__hwexam_inclassign_number_int,
5151 title .tl_set:N = \l__hwexam_inclassign_title_tl,
5152 type .tl_set:N = \l__hwexam_inclassign_type_tl,
5153 given .tl_set:N = \l__hwexam_inclassign_given_tl,
5154 due .tl_set:N = \l__hwexam_inclassign_due_tl,
5155 mhrepos .str_set_x:N = \l__hwexam_inclassign_mhrepos_str
5156 }
5157 \cs_new_protected:Nn \__hwexam_inclassignment_args:n {
5158 \int_set:Nn \l__hwexam_inclassign_number_int {-1}
5159 \tl_clear:N \l__hwexam_inclassign_title_tl
5160 \tl_clear:N \l__hwexam_inclassign_type_tl
5161 \tl_clear:N \l__hwexam_inclassign_given_tl
5162 \tl_clear:N \l__hwexam_inclassign_due_tl
5163 \str_clear:N \l__hwexam_inclassign_mhrepos_str
5164 \keys_set:nn { hwexam / inclassignment }{ #1 }
5165 }
5166 \__hwexam_inclassignment_args:n {}
5167
5168 \newcommand\inputassignment[2][ ]{
5169 \__hwexam_inclassignment_args:n { #1 }
5170 \str_if_empty:NTF \l__hwexam_inclassign_mhrepos_str {
5171 \input{#2}
5172 }{
5173 \stex_in_repository:nn{\l__hwexam_inclassign_mhrepos_str}{

```

```

5174 \input{\mhp\path{\l__hwexam_inclasssign_mhrepos_str}{#2}}
5175 }
5176 }
5177 \__hwexam_inclasssignment_args:n {}
5178 }
5179 \newcommand\includeassignment[2][ ]{

## 35.5 Leftovers

at some point, we may want to reactivate the logos font, then we use

here we define the logos that characterize the assignment

```

\font\bierrfont=../assignments/bierglas
\font\denkerfont=../assignments/denker
\font\uhrfont=../assignments/uhr
\font\warnschildfont=../assignments/achtung

```

```

\newcommand\bierrglas{\bierrfont\char65}
\newcommand\denker{\denkerfont\char65}
\newcommand\uhr{\uhrfont\char65}
\newcommand\warnschild{\warnschildfont\char 65}
\newcommand\hardA{\warnschild}
\newcommand\longA{\uhr}
\newcommand\thinkA{\denker}
\newcommand\discussA{\bierrglas}

```
