# Part I **Manual**

# Stuff

# 1.1 Modules

\sTeX \stex

Both print this STEX logo.

#### 1.1.1 Semantic Macros and Notations

Semantic macros invoke a formally declared symbol.

To declare a symbol (in a module), we use \symdecl, which takes as argument the name of the corresponding semantic macro, e.g. \symdecl{foo} introduces the macro \foo. Additionally, \symdecl takes several options, the most important one being its arity. foo as declared above yields a *constant* symbol. To introduce an *operator* which takes arguments, we have to specify which arguments it takes.

For example, to introduce binary multiplication, we can do \symdecl[args=2]{mult}. We can then supply the semantic macro with arbitrarily many notations, such as \notation{mult}{#1 #2}.

# Example 1

```
\symdecl [args = 2]{mult}
\notation{mult}{#1 #2}
\mult{a}{b}\$
```

Since usually, a freshly introduced symbol also comes with a notation from the start, the \symdef command combines \symdecl and \notation. So instead of the above, we could have also written

\symdef[args=2]{mult}{#1 #2}

Adding more notations like  $\notation[cdot]{mult}{#1 } comp{\cdot} #2} or$ \notation[times] \{ mult \{ #1 \comp{\times} #2 \allows us to write \\mult[cdot] \{a} \{b} \\$ and  $\mathcal {a}\$ 

### Example 2

```
a \cdot b and a \times b
```

EdN:1

Not using an explicit option with a semantic macro yields the first declared notation, unless changed<sup>1</sup>.

Outside of math mode, or by using the starred variant \foo\*, allows to provide a custom notation, where notational (or textual) components can be given explicitly in square brackets.

### Example 3

```
a*b is the product of and b
```

In custom mode, prefixing an argument with a star will not print that argument, but still export it to OMDoc:

# Example 4

```
Multiplyingagain by b yields...
```

The syntax  $*[\langle int \rangle]$  allows switching the order of arguments. For example, given a 2-ary semantic macro \forevery with exemplary notation \forall #1. #2, we can write

# Example 5

```
\label{lem:comp} $$ \operatorname{proposition $P$}[ \operatorname{for every} ] *[1]_{ x\in A} $$ in A$
The proposition Pholds for every x \in A
```

<sup>&</sup>lt;sup>1</sup>EdNote: TODO

When using \*[n], after reading the provided (nth) argument, the "argument counter" automatically continues where we left off, so the \*[1] in the above example can be omitted.

For a macro with arity > 0, we can refer to the operator itself semantically by suffixing the semantic macro with an exclamation point! in either text or math mode. For that reason \notation (and thus \symdef) take an additional optional argument op=, which allows to assign a notation for the operator itself. e.g.

### Example 6

```
\label{lem:symdef} $$ \arg =2, op=\{+\} $$ {\rm add} {\#1 \subset p+ \#2}$$ The operator $$ \add! $$ adds two elements, as in $$ add ab$
The operator + adds two elements, as in a+b.
```

\* is composable with! for custom notations, as in:

### Example 7

```
\mult![\comp{Multiplication}] (denoted by $\mult*![\comp\cdot]$) is defined by...
Multiplication (denoted by ·) is defined by..
```

The macro \comp as used everywhere above is responsible for highlighting, linking, and tooltips, and should be wrapped around the notation (or text) components that should be treated accordingly. While it is attractive to just wrap a whole notation, this would also wrap around e.g. the arguments themselves, so instead, the user is tasked with marking the notation components themself.

The precise behaviour of \comp is governed by the macro \@comp, which takes two arguments: The tex code of the text (unexpanded) to highlight, and the URI of the current symbol. \@comp can be safely redefined to customize the behaviour.

The starred variant \symdecl\*{foo} does not introduce a semantic macro, but still declares a corresponding symbol. foo (like any other symbol, for that matter) can then be accessed via \STEXsymbol{foo} or (if foo was declared in a module Foo) via \STEXModule{Foo}?{foo}.

both \STEXsymbol and \STEXModule take any arbitrary ending segment of a full URI to determine which symbol or module is meant. e.g. \STEXsymbol {Foo?foo} is also valid, as are e.g. \STEXModule{path?Foo}?{foo} or \STEXsymbol{path?Foo?foo}

There's also a convient shortcut \symref{?foo}{some text} for \STEXsymbol{?foo}! [some text]

# Other Argument Types

So far, we have stated the arity of a semantic macro directly. This works if we only have "normal" (or more precisely: i-type) arguments. To make use of other argument types, instead of providing the arity numerically, we can provide it as a sequence of characters representing the argument types – e.g. instead of writing args=2, we can equivalently write args=ii, indicating that the macro takes two i-type arguments.

Besides i-type arguments, STFX has two other types, which we will discuss now.

The first are binding (b-type) arguments, representing variables that are bound by the operator. This is the case for example in the above \forevery-macro: The first argument is not actually an argument that the forevery "function" is "applied" to; rather, the first argument is a new variable (e.g. x) that is bound in the subsequent argument. More accurately, the macro should therefore have been implemented thusly:

```
\symdef[args=bi]{forevery}{\forall #1.\; #2}
```

b-type arguments are indistinguishable from i-type arguments within STEX, but are treated very differently in OMDoc and by MMT. More interesting within STFX are a-type arguments, which represent (associative) arguments of flexible arity, which are provided as comma-separated lists. This allows e.g. better representing the \mult-macro above:

### Example 8

```
a \cdot b \cdot c \cdot d^e \cdot f
```

'As the example above shows, notations get a little more complicated for associative arguments. For every a-type argument, the \notation-macro takes an additional argument that declares how individual entries in an a-type argument list are aggregated. The first notation argument then describes how the aggregated expression is combined into the full representation.

For a more interesting example, consider a flexary operator for ordered sequences in ordered set, that taking arguments  $\{a,b,c\}$  and  $\mathbb{R}$  prints  $a < b < c \in \mathbb{R}$ . This operator takes two arguments (an a-type argument and an i-type argument), aggregates the individuals of the associative argument using \leq, and combines the result with \in and the second argument thusly:

# Example 9

```
ai]{numseq}{#1 \comp\in #2}{#1 \comp\leq #2}}{\mathbb R\$
a \leq b \leq c \in \mathbb{R}
```

Finally, B-type arguments combine the functionalities of a and b, i.e. they represent flexary binding operator arguments.

 $<sup>^2</sup>$ EDNote: what about e.g. \int \_x\int \_y\int \_z f dx dy dz?

 $<sup>^3\</sup>mathrm{EdNote}\colon$  "decompose" a-type arguments into fixed-arity operators?

#### Precedences

Every notation has an (upwards) operator precedence and for each argument a (downwards) argument precedence used for automated bracketing. For example, a notation for a binary operator \foo could be declared like this:

```
\notation[prec=200;500x600]{foo}{#1 \setminus comp{+} #2}
```

assigning an operator precedence of 200, an argument precedence of 500 for the first argument, and an argument precedence of 600 for the second argument.

SIEX insert brackets thusly: Upon encountering a semantic macro (such as \foo), its operator precedence (e.g. 200) is compared to the current downwards precedence (initially \neginfprec). If the operator precedence is *larger* than the current downwards precedence, parentheses are inserted around the semantic macro.

Notations for symbols of arity 0 have a default precedence of  $\$ infprec, i.e. by default, parentheses are never inserted around constants. Notations for symbols with arity > 0 have a default operator precedence of 0. If no argument precedences are explicitly provided, then by default they are equal to the operator precedence.

Consequently, if some operator A should bind stronger than some operator B, then As operator precedence should be smaller than Bs argument precedences.

For example:

## Example 10

```
\notation [prec=100]{plus}{#1 \comp{+} #2} \notation [prec=50]{times}{#1 \comp{\cdot} #2} \s\plus{a}{\times{b}{c}} and $\times{a}{\plus{b}{c}} and $\times{a}{\plus{b}{c}} and $\times{a}{\plus{b}{c}} and $\times{a}{\plus{b}{c}} and $\plus{b}{c}} and $\plus{b}{c} and $\plus{b}{c} and $\plus{b
```

### 1.1.2 Archives and Imports

### Namespaces

Ideally, STEX would use arbitrary URIs for modules, with no forced relationships between the *logical* namespace of a module and the *physical* location of the file declaring the module – like MMT does things.

Unfortunately, TEX only provides very restricted access to the file system, so we are forced to generate namespaces systematically in such a way that they reflect the physical location of the associated files, so that STEX can resolve them accordingly. Largely, users need not concern themselves with namespaces at all, but for completenesses sake, we describe how they are constructed:

- If \begin{module}{Foo} occurs in a file /path/to/file/Foo[.\(\lang\)].tex which does not belong to an archive, the namespace is file://path/to/file.
- If the same statement occurs in a file /path/to/file/bar[.\(\lang\)].tex, the namespace is file://path/to/file/bar.

In other words: outside of archives, the namespace corresponds to the file URI with the filename dropped iff it is equal to the module name, and ignoring the (optional) language suffix<sup>1</sup>.

If the current file is in an archive, the procedure is the same except that the initial segment of the file path up to the archive's source-folder is replaced by the archive's namespace URI.

#### Paths in Import-Statements

Conversely, here is how namespaces/URIs and file paths are computed in import statements, examplary \importmodule:

- \importmodule{Foo} outside of an archive refers to module Foo in the current namespace. Consequently, Foo must have been declared earlier in the same document or, if not, in a file Foo[. $\langle lang \rangle$ ].tex in the same directory.
- The same statement within an archive refers to either the module Foo declared earlier in the same document, or otherwise to the module Foo in the archive's top-level namespace. In the latter case, is has to be declared in a file Foo [. $\langle lang \rangle$ ].tex directly in the archive's source-folder.
- Similarly, in \importmodule{some/path?Foo} the path some/path refers to either the sub-directory and relative namespace path of the current directory and namespace outside of an archive, or relative to the current archive's top-level namespace and source-folder, respectively.
  - The module Foo must either be declared in the file  $\langle top\text{-}directory \rangle$ /some/path/Foo[. $\langle lang \rangle$ ].tex, or in  $\langle top\text{-}directory \rangle$ /some/path[. $\langle lang \rangle$ ].tex (which are checked in that order).
- Similarly, \importmodule[Some/Archive] {some/path?Foo} is resolved like the previous cases, but relative to the archive Some/Archive in the mathhub-directory.
- Finally, \importmodule{full://uri?Foo} naturally refers to the module Foo in the namespace full://uri. Since the file this module is declared in can not be determined directly from the URI, the module must be in memory already, e.g. by being referenced earlier in the same document.
  - Since this is less compatible with a modular development, using full URIs directly is discouraged.

<sup>&</sup>lt;sup>1</sup>which is internally attached to the module name instead, but a user need not worry about that.

# Part II Documentation

# **STEX-Basics**

Both the STEX package and class offer the following package options:

**debug**  $(\langle log\text{-}prefix\rangle *)$  Logs debugging information with the given prefixes to the terminal, or all if all is given.

**showmods**  $(\langle boolean \rangle)$  Shows explicit module information at the document margins.

lang  $(\langle language \rangle *)$  Languages to load with the babel package.

mathhub ( $\langle directory \rangle$ ) MathHub folder to search for repositories.

sms ( $\langle boolean \rangle$ ) use persisted mode (see ???).

image  $(\langle boolean \rangle)$  passed on to tikzinput.

# 2.1 Macros and Environments

\sTeX Both print this STEX logo. \stex

 $\label{log-prefix} $$ \operatorname{stex\_debug:nn } {\langle \log\operatorname{-prefix}\rangle} \ {\langle \operatorname{message}\rangle} $$$ 

Logs  $\langle message \rangle$ , if the package option debug contains  $\langle log\text{-}prefix \rangle$ .

\stex\_add\_to\_sms:n Adds the provided code to the .sms-file of the document.

\if@latexml LATEX2e and LATEX2

\latexml\_if:F

\latexml\_if:TF

IATEX2e and IATEX3 conditionals for LATEXML.

We have four macros for annotating generated HTML (via LaTeXML or RusTeX) with attributes:

 $\stex_annotate:nnn $$ \stex_annotate:nnn {\property} $ {\content} $ \stex_annotate_invisible:nnn \stex_annotate_invisible:n} $$$ 

Annotates the HTML generated by  $\langle content \rangle$  with

property="stex: $\langle property \rangle$ ", resource=" $\langle resource \rangle$ ".

\stex\_annotate\_invisible:n adds the attributes

stex:visible="false", style="display:none".

\stex\_annotate\_invisible:nnn combines the functionality of both.

stex\_annotate\_env

 $\label{lem:content} $$ \operatorname{content} \ \operatorname{content} \ \operatorname{stex\_annotate\_env} \ \operatorname{stex\_annotate\_env} \ \operatorname{like \ stex\_annotate:nnn} \ \{\langle property \rangle\} \ \{\langle resource \rangle\} \ \{\langle content \rangle\}.$ 

\c\_stex\_languages\_prop
\c\_stex\_language\_abbrevs\_prop

Map language abbreviations to their full babel names and vice versa. e.g. \c\_stex\_languages\_prop{en} yields english, and \c\_stex\_language\_abbrevs\_prop{english} yields en.

\stex\_deactivate\_macro:Nn \stex\_reactivate\_macro:N  $\verb|\stex_deactivate_macro:Nn| \langle cs \rangle \{ \langle environments \rangle \}|$ 

Makes the macro  $\langle cs \rangle$  throw an error, indicating that it is only allowed in the context of  $\langle environments \rangle$ .

 $\verb|\stex_reactivate_macro:N| \langle cs \rangle \text{ reactivates it again, i.e. this happens ideally in the } \\ \langle begin \rangle \text{-code of the associated environments.}$ 

\MSC

 $\verb|\MSC{|\langle msc \rangle|}|$ 

Designates the  $math\ subject\ classifier$  of the current module / file.

# STEX-MathHub

Code related to managing and using MathHub repositories, files, paths and related hooks and methods.

# 3.1 Macros and Environments

\stex\_kpsewhich:n

\stex\_kpsewhich:n executes kpsewhich and stores the return in \l\_stex\_kpsewhich\_return\_str. This does not require shell escaping.

# 3.1.1 Files, Paths, URIs

 $\label{lem:lem:lem:nn} $$ \operatorname{stex\_path\_from\_string:Nn} \ \operatorname{stex\_path\_from\_string:Nn} \ \langle \operatorname{path-variable} \ \{\langle \operatorname{string} \rangle \} $$ $$ \operatorname{long}(NV|\operatorname{cn}|\operatorname{cV}) $$$ 

turns the  $\langle string \rangle$  into a path by splitting it at /-characters and stores the result in  $\langle path\text{-}variable \rangle$ . Also applies \stex\_path\_canonicalize:N.

\stex\_path\_to\_string:NN \stex\_path\_to\_string:N

The inverse; turns a path into a string and stores it in the second argument variable, or leaves it in the input stream.

 $\stex_path_canonicalize:N$ 

Canonicalizes the path provided; in particular, resolves . and .. path segments.

 $\stex_path_if_absolute_p:N * \\stex_path_if_absolute:NTF *$ 

Checks whether the path provided is absolute, i.e. starts with an empty segment

\c\_stex\_pwd\_seq
\c\_stex\_pwd\_str
\c\_stex\_mainfile\_seq
\c\_stex\_mainfile\_str

Store the current working directory as path-sequence and string, respectively, and the (heuristically guessed) full path to the main file, based on the PWD and \jobname.

 $\g_stex\_currentfile\_seq$ 

The file being currently processed (respecting \input etc.)

#### Test 1

```
\ExplSyntaxOn

3.1.2 MathHub Archives

\mathhub
\c\_stex\_mathhub\_seq
\c\_stex\_mathhub\_str

We determine the path to the local MathHub folder via one of three means, in order of precedence:

- 1. The mathhub package option, or
- 2. the \mathhub-macro, if it has been defined before the \usepackage{stex}-statement, or
- 3. the MATHHUB system variable.

In all three cases, \c\_stex\_mathhub\_seq and \c\_stex\_mathhub\_str are set accordingly.

#### \l\_stex\_current\_repository\_prop

Always points to the *current* MathHub repository (if we currently are in one). Has the fields id, ns (namespace), narr (narrative namespace; currently not in use) and deps (dependencies; currently not in use).

#### \stex\_set\_current\_repository:n

Sets the current repository to the one with the provided ID. calls \\_\_stex\_mathhub\_-do\_manifest:n, so works whether this repository's MANIFEST.MF-file has already been read or not.

### \stex\_require\_repository:n

Calls \\_\_stex\_mathhub\_do\_manifest:n iff the corresponding archive property list does not already exist, and adds a corresponding definition to the .sms-file.

#### \stex\_in\_repository:nn

 $\stex_in_repository:nn{\langle repository-name \rangle}{\langle code \rangle}$ 

Change the current repository to  $\{\langle repository-name \rangle\}$  (or not, if  $\{\langle repository-name \rangle\}$  is empty), and passes its ID on to  $\{\langle code \rangle\}$  as #1. Switches back to the previous repository after executing  $\{\langle code \rangle\}$ .

#### \mhpath \*

 $\mbox{\colored} {\bf \colored} {\bf \colored}$ 

Expands to the full path of file  $\langle filename \rangle$  in repository  $\langle archive\text{-}ID \rangle$ . Does not check whether the file or the repository exist.

# \inputref \inputref:nn

 $\inputref[\langle archive-ID \rangle] \{\langle filename \rangle\}$ 

\inputs the file  $\langle filename \rangle$  in repository  $\langle archive-ID \rangle$ .

#### \libinput

 $\left\langle filename \right\rangle$ 

Inputs  $\langle filename \rangle$ .tex from the lib folders in the current archive and the meta-infarchive of the current archive group (if existent). Throws an error if no file by that name exists in either folder, includes both if both exist.

### Test 2

```
\ExplSyntaxOn
\stex_require_repository:n { Foo/Bar }
id:~\prop_item:cn {c_stex_mathhub_Foo/Bar_manifest_prop} {id}\\\
narr-\prop_item:cn {c_stex_mathhub_Foo/Bar_manifest_prop} {narr}\\
ns:~\prop_item:cn {c_stex_mathhub_Foo/Bar_manifest_prop} {ns}\\\
deps:~\prop_item:cn {c_stex_mathhub_Foo/Bar_manifest_prop} {deps}\\\
stex_require_repository:n { Bar/Foo }
\ExplSyntaxOff
```

```
id: Foo/Bar
narr:
ns: http://mathhub.info/tests/Foo/Bar
deps:

# STEX-References

Code related to links and cross-references

# 4.1 Macros and Environments

# **STEX-Modules**

Code related to Modules

# 5.1 Macros and Environments

### \l\_stex\_current\_module\_prop

All information of a module is stored as a property list. \l\_stex\_current\_module\_prop always points to the current module (if existent).

Most importantly, the **content**-field stores all the code to execute on activation; i.e. when this module is being included.

Additionally, it stores:

- The name in field name,
- the namespace in field ns,
- this module's language in field lang,
- if a language module that translates some other modules, the *original* module in field sig (for signature),
- the metatheory in field meta,
- the URIs of all imported modules in field imports,
- the names of all declarations in field constants,
- the file this module was declared in in field file,

\l\_stex\_all\_modules\_seq

Stores full URIs for all modules currently in scope.

```
\g_stex_module_files_prop
\g_stex_modules_in_file_seq
```

A property list mapping file paths to the lists of all modules declared therein. \g\_stex\_-modules\_in\_file\_seq always points to the current file(-stream - \inputs are considered the same file).

 $\label{lem:conditional} $$ \operatorname{if\_in\_module\_p:} \; \star \quad $$ Conditional for whether we are currently in a module \\ \operatorname{if\_in\_module:} $\underline{\mathit{TF}} \; \star $$ $$$ 

```
\stex_if_module_exists_p:n \star \\stex_if_module_exists:n_{TF} \star
```

Conditional for whether a module with the provided URI is already known.

\stex\_add\_to\_current\_module:n \STEXexport

Adds the provided tokens to the content field of the current module.

\stex\_add\_constant\_to\_current\_module:n

Adds the declaration with the provided name to the constants field of the current module.

\stex\_add\_import\_to\_current\_module:n

Adds the module with the provided full URI to the imports field of the current module.

```
\begin{tabular}{ll} $$ \end{tabular} $
```

Computes the name space for file  $\langle path \rangle$  in repository with name space  $\langle namespace \rangle$  as follows:

If the file is .../source/sub/file.tex and the namespace http://some.namespace/foo, then the namespace of is http://some.namespace/foo/sub/file.

\stex\_modules\_current\_namespace:

Computes the current namespace

#### Test 3

```

```

.

### 5.1.1 The module-environment

module

\begin{module} [ $\langle options \rangle$ ] { $\langle name \rangle$ }
Opens a new module with name  $\langle name \rangle$ .
TODO document options.

\stex\_module\_setup:nn

 $\stex_module_setup:nn{\langle params \rangle}{\langle name \rangle}$ 

Sets up a new module with name  $\langle name \rangle$  and optional parameters  $\langle params \rangle$ . In particular, sets \l\_stex\_current\_module\_prop appropriately.

\stex\_modules\_heading:

Takes care of the module header, if the **showmods** package option is true. This macro can be overridden for customization.

@module

 $\label{lem:cond} $$ \operatorname{\mathfrak{Q}}(\operatorname{\mathfrak{Q}}) = \operatorname{\mathfrak{Q}}(\operatorname{\mathfrak{Q}}) $$ Core functionality of the module-environment without a header.$

Module 5.1.1[Bar] (FooBar)

Module path: http://mathhub.info/tests/Foo/Bar/Foo?Bar

Language:
Signature:
Metatheory:
```

\STEXModule

 $\verb|\STEXModule {| \langle fragment \rangle|}|$ 

Attempts to find a module whose URI ends with  $\langle fragment \rangle$  in the current scope and passes the full URI on to  $stex_invoke_module:n$ .

\stex\_invoke\_module:n

Invoked by \STEXModule. Needs to be followed either by  $!\langle macro \rangle$  or  $?\{\langle symbolname \rangle\}$ . In the first case, it stores the full URI in  $\langle macro \rangle$ ; in the second case, it invokes the symbol  $\langle symbolname \rangle$  in the selected module.

#### Test 6

foo1
foo2
foo3
```

\stex\_activate\_module:n

Activate the module with the provided URI; i.e. executes all macro code of the module's content-field (does nothing if the module is already activated in the current context) and adds the module to \l\_stex\_all\_modules\_seq.

# STeX-Module Inheritance

Code related to Module Inheritance, in particular sms mode.

# 6.1 Macros and Environments

### 6.1.1 SMS Mode

"SMS Mode" is used when loading modules from external tex files. It deactivates any output and ignores all T<sub>E</sub>X commands not explicitly allowed via the following lists:

### $\g_stex_smsmode_allowedmacros_tl$

Macros that are executed as is; i.e. with the category code scheme used in SMS mode.

### $\verb|\g_stex_smsmode_allowedmacros_escape_tl|\\$

Macros that are executed with the category codes restored.

Importantly, these macros need to call \stex\_smsmode\_set\_codes: after reading all arguments. Note, that \stex\_smsmode\_set\_codes: takes care of checking whether we are in SMS mode in the first place, so calling this function eagerly is unproblematic.

### $\g_stex_smsmode_allowedenvs_seq$

The names of environments that should be allowed in SMS mode. The corresponding \begin-statements are treated like the macros in \g\_stex\_smsmode\_allowedmacros\_-escape\_tl, so \stex\_smsmode\_set\_codes: should be called at the end of the \begin-code. Since \end-statements take no arguments anyway, those are called with the SMS mode category code scheme active.

\stex\_if\_smsmode\_p: \*

 $\text{\stex\_if\_smsmode:} \underline{\mathit{TF}} \star$ 

Tests whether SMS mode is currently active.

### \stex\_smsmode\_set\_codes:

Sets the current category code scheme to that of the SMS mode, if SMS mode is currently active and if necessary.

This method should be called at the end of every macro or **\begin** environment code that are allowed in SMS mode.

\stex\_in\_smsmode:nn

```
\stex_in_smsmode:nn {\langle name \rangle} {\langle code \rangle}
```

Executes  $\langle code \rangle$  in SMS mode.  $\langle name \rangle$  can be arbitrary, but should be distinct, since it allows for nesting  $\text{stex\_in\_smsmode:nn}$  without spuriously terminating SMS mode.

# Test 7

```
\immediate\openout\testfile=./tests/sometest.tex
\immediate\write\testfile{\detokenize{\this is \a test}^^J}
\immediate\write\testfile{\detokenize{this \is a \test}}
\immediate\closeout\testfile
\ExplSyntaxOn
\stex_in_smsmodenn { foo } {
\input{tests/sometest.tex}}
}
\ExplSyntaxOff
```

6.1.2 Imports and Inheritance

\importmodule

 $\verb|\importmodule[|\langle archive-ID\rangle]| \{|\langle module-path\rangle|\}|$ 

Imports a module by reading it from a file and "activating" it. STEX determines the module and its containing file by passing its arguments on to \stex\_import\_module\_-path:nn.

### Test 8

```
\begin{module}{Foo}
\symdec! [name=foo, args=3]{bar}
\symdec! [args=bai]{foobar}
Meaning:-\present\bar\\
\end{module}
Meaning:-\present\bar\\
\begin{module}{Importtest}
\importmodule{Foo}
Meaning:-\present\bar\\
\begin{module}{Importtest}
\importmodule{Foo}
Meaning:-\present\bar\\
\end{module}

### Test 10

```
Circular dependencies:

\begin{module}{CircDep1}

\importmodule[Foo/Bar]{circular1?Circular1}

\importmodule[Bar/Foo]{circular2?Circular2}

\present\fooA\\

\present\fooB

\end{module}
```

Circular dependencies:

>macro:->\stex\_invoke\_symbol:n {http://mathhub.info/tests/Foo/Bar/circular1?forA}«
>macro:->\stex\_invoke\_symbol:n {http://mathhub.info/tests/Bar/Foo//circular2?Circular2?fooB}«

\stex\_import\_module\_uri:nn

 $\verb|\stex_import_module_uri:nn| \{\langle archive-ID \rangle\} \ \{\langle module-path \rangle\}|$ 

Determines the URI of a module by splitting  $\langle module\text{-}path \rangle$  into  $\langle path \rangle$ ? $\langle name \rangle$ . If  $\langle module\text{-}path \rangle$  does not contain a ?-character, we consider it to be the  $\langle name \rangle$ , and  $\langle path \rangle$  to be empty.

If  $\langle archive\text{-}ID \rangle$  is empty, it is automatically set to the ID of the current archive (if one exists).

### 1. If $\langle archive\text{-}ID \rangle$ is empty:

- (a) If  $\langle path \rangle$  is empty, then  $\langle name \rangle$  must have been declared earlier in the same file and retrievable from  $\g_stex_modules_in_file_seq$ , or a file with name  $\langle name \rangle . \langle lang \rangle$ . tex must exist in the same folder, containing a module  $\langle name \rangle$ . That module should have the same namespace as the current one.
- (b) If  $\langle path \rangle$  is not empty, it must point to the relative path of the containing file as well as the namespace.

#### 2. Otherwise:

(a) If  $\langle path \rangle$  is empty, then  $\langle name \rangle$  must have been declared earlier in the same file and retrievable from  $\g_stex_modules_in_file_seq$ , or a file with name  $\langle name \rangle . \langle lang \rangle$ .tex must exist in the top source folder of the archive, containing a module  $\langle name \rangle$ .

That module should lie directly in the namespace of the archive.

(b) If  $\langle path \rangle$  is not empty, it must point to the path of the containing file as well as the namespace, relative to the namespace of the archive.

If a module by that namespace exists, it is returned. Otherwise, we call \stex\_require\_module:nn on the source directory of the archive to find the file.

 $\label{lem:lemont_require_module:nnnn} $$\{\langle ns \rangle\} $$ {\langle archive-ID \rangle} $$ {\langle path \rangle} $$ {\langle name \rangle}$$ 

Checks whether a module with URI  $\langle ns \rangle$ ? $\langle name \rangle$  already exists. If not, it looks for a plausible file that declares a module with that URI.

Finally, activates that module by executing its content-field.

# **STEX-Symbols**

Code related to symbol declarations and notations

# 7.1 Macros and Environments

\symdecl

 $\verb|\symdecl[\langle args \rangle] {\langle macroname \rangle}|$ 

Declares a new symbol with semantic macro \macroname. Optional arguments are:

- name: An (OMDoc) name. By default equal to  $\langle macroname \rangle$ .
- type: An (ideally semantic) term. Not used by STEX, but passed on to MMT for semantic services.
- local: A boolean (by default false). If set, this declaration will not be added to the module content, i.e. importing the current module will not make this declaration available.
- args: Specifies the "signature" of the semantic macro. Can be either an integer  $0 \le n \le 9$ , or a (more precise) sequence of the following characters:
  - i a "normal" argument, e.g. \symdecl[args=ii]{plus} allows for \plus{2}{2}.
  - a an associative argument; i.e. a sequence of arbitrarily many arguments provided as a comma-separated list, e.g. \symdecl[args=a]{plus} allows for \plus{2,2,2}.
  - b a variable argument. Is treated by STEX like an i-argument, but an application is turned into an OMBind in OMDOC, binding the provided variable in the subsequent arguments of the operator; e.g. \symdecl[args=bi]{forall} allows for \forall{x\in\Nat}{x\geq0}.

\stex\_symdecl\_do:n

Implements the core functionality of \symdecl, and is called by \symdecl and \symdef. Ultimately stores the symbol  $\langle URI \rangle$  in the property list \g\_stex\_symdecl\_ $\langle URI \rangle$ \_prop with fields:

- name (string),
- module (string),
- notations (sequence of strings; initially empty),
- local (boolean),
- type (token list),
- args (string of is, as and bs),
- arity (integer string),
- assocs (integer string; number of associative arguments),

#### Test 11

```
\begin{module}{SymdeclTest}
\symdecl[name=foo, args=3]{bar}
\symdecl[name=foobar, args=iab]{bari}
\symdecl[def=|bar* abc]{bardef}
\ExplSyntaxOn
Meaning:-\present\bar\\

Module 7.1.1[SymdeclTest]

Meaning: >macro:->\stex\_invoke\_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?foo}

Result: file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?foo

Meaning: >macro:->\stex\_invoke\_symbol:n {file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?SymdeclTest?bardef}

\l\_stex\_all\_symbols\_seq

Stores full URIs for all modules currently in scope.

\stex\_get\_symbol:n

Computes the full URI of a symbol from a macro argument, e.g. the macro name, the macro itself, the full URI...

\notation

 $\verb| \notation[| \langle args \rangle] {| \langle symbol \rangle} {| \langle notations^+ \rangle}$ 

Introduces a new notation for  $\langle symbol \rangle$ , see \stex\_notation\_do:nn

\stex\_notation\_do:nn

 $\stex_notation_do:nn{\langle \mathit{URI} \rangle}{\langle \mathit{notations}^+ \rangle}$ 

Implements the core functionality of  $\notation$ , and is called by  $\notation$  and  $\symdef$ .

Ultimately stores the notation in the property list  $\gsin variant = \sqrt{URI} + \sqrt{variant} + \sqrt{ung} - variant = 0$ .

- symbol (URI string),
- language (string),
- variant (string),
- opprec (integer string),
- argprecs (sequence of integer strings)

#### Test 12

\symdef

 $\symdef[\langle args \rangle] \{\langle symbol \rangle\} \{\langle notations^+ \rangle\}$ 

Combines \symdecl and \notation by introducing a new symbol and assigning a new notation for it.

### Test 13

```
\begin{module}{SymdefTest} \\ symdef[args=a, prec=50]{plus}{ #1 }{#1 }comp+ #2} \\ \$\plus{a,b,c} \$ \\ end{module} \end{module}
```

Module 7.1.3[SymdefTest]

# STEX-Terms

Code related to symbolic expressions, typesetting notations, notation components, etc.

### 8.1 Macros and Environments

\STEXsymbol

Uses \stex\_get\_symbol:n to find the symbol denoted by the first argument and passes the result on to \stex\_invoke\_symbol:n

\symref

 $\verb|\symref{\symbol|} | (text)|$ 

shortcut for  $\STEXsymbol{\langle symbol \rangle}! [\langle text \rangle]$ 

\stex\_invoke\_symbol:n

Executes a semantic macro. Outside of math mode or if followed by \*, it continues to \stex\_term\_custom:nn. In math mode, it uses the default or optionally provided notation of the associated symbol.

If followed by !, it will invoke the symbol *itself* rather than its application (and continue to \stex\_term\_custom:nn), i.e. it allows to refer to \plus![addition] as an operation, rather than \plus[addition of]{some}{terms}.

\\_stex\_term\_math\_oms:nnnn \\_stex\_term\_math\_oma:nnnn \\_stex\_term\_math\_omb:nnnn  $\langle \mathit{URI} \rangle \langle \mathit{fragment} \rangle \langle \mathit{precedence} \rangle \langle \mathit{body} \rangle$ 

Annotates  $\langle body \rangle$  as an OMDoc-term (OMID, OMA or OMBIND, respectively) with head symbol  $\langle URI \rangle$ , generated by the specific notation  $\langle fragment \rangle$  with (upwards) operator precedence  $\langle precedence \rangle$ . Inserts parentheses according to the current downwards precedence and operator precedence.

\\_stex\_term\_math\_arg:nnn

 $\stex_term_arg:nnn\langle int \rangle\langle prec \rangle\langle body \rangle$ 

Annotates  $\langle body \rangle$  as the  $\langle int \rangle$ th argument of the current OMA or OMBIND, with (downwards) argument precedence  $\langle prec \rangle$ .

Annotates  $\langle body \rangle$  as the  $\langle int \rangle$ th (associative) sequence argument (as comma-separated list of terms) of the current OMA or OMBIND, with (downwards) argument precedence  $\langle prec \rangle$  and associative notation  $\langle notation \rangle$ .

\infprec \neginfprec

Maximal and minimal notation precedences.

\dobrackets

\dobrackets  $\{\langle body \rangle\}$ 

Puts  $\langle body \rangle$  in parentheses; scaled if in display mode unscaled otherwise. Uses the current STEX brackets (by default ( and )), which can be changed temporarily using \withbrackets.

\withbrackets

\withbrackets  $\langle left \rangle \langle right \rangle \{\langle body \rangle\}$ 

Temporarily (i.e. within  $\langle body \rangle$ ) sets the brackets used by SIEX for automated bracketing (by default ( and )) to  $\langle left \rangle$  and  $\langle right \rangle$ .

Note that  $\langle left \rangle$  and  $\langle right \rangle$  need to be allowed after \left and \right in displaymode.

#### Test 14

```
\begin{module}{MathTest1}
\importmodule{Foo}
\notation[foo, prec=500;20x20x20]{bar}{\comp\langle {#1 ^ {#2}}_{#3} \comp\rangle }
$\bar abc$ and $\bar[foo] abc$.
\end{module}
```

```
\begin{tabular}{ll} \bf Module~8.1.1[MathTest1] & modulesImporting~module:~file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo~~ \langle a^b{}_c\rangle & and ~ \langle a^b{}_c\rangle. \end{tabular}
```

#### Test 15

```
\begin{module}{MathTest2}
\importmodule{Foo}
\notation[foo, prec=500;20x20x20]{foobar}{\comp\langle #1 \comp\mid [ #2 ]^{#3} \comp\rangle }{ {#1}_{\comp}\rangle }{ {*1}_{\comp}\rangle }{ {*1}_{\comp}\r
```

```
 \begin{aligned} & \textbf{Module } 8.1.2 [\textbf{MathTest2}] \\ & \textbf{modulesImporting module: file:}//\textbf{home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo} \ \langle a|[b:c:d:e:_j] \\ & \textbf{and} \ \langle a|[b:c:]^g\rangle \ \textbf{and} \ \langle a|[b]^c\rangle \\ & a+(b\cdot c) \ \textbf{and} \ a \cdot \frac{a}{b} + \frac{a}{c} \\ & a+(b\cdot c) \ \textbf{and} \ a \cdot \frac{a}{b} + \frac{a}{c} \\ & a+(b\cdot c) \ \textbf{and} \ a \cdot \frac{a}{b} + \frac{a}{c} \end{aligned}
```

\stex\_term\_custom:nn

 $\stex_term_custom:nn{\langle \mathit{URI} \rangle}{\langle \mathit{args} \rangle}$ 

Implements custom one-time notation. Invoked by \stex\_invoke\_symbol:n in text mode, or if followed by \* in math mode, or whenever followed by !.

#### Test 16

```
\begin{module}{TextTest}
\importmodule{Foo}
\bar[some ]a[ and some ]b[ and also some ]c[ here].
$\bar*[\text{some }]a[\text{ and some }]b[\text{ and also some }]c[\text{ here}]$.
$\bar!![\mathtt{bar}]$
\bar*{a}*{b}[or just some ]c
\bar![bar]
\bar[or first ]*[2]{b}[, then ]*[3]{c}[, and finally ]a
\end{module}
```

```
Module 8.1.3 [TextTest]
modulesImporting module: file://home/jazzpirate/work/Software/ext/sTeX/doc/stextest?Foo
some aand some band also some chere.
some a and some b and also some c here.
bar
or just some c
bar
or first b, then c, and finally a
```

\stex\_highlight\_term:nn

 $\stex_highlight_term:nn{\langle \mathit{URI}\rangle}{\langle \mathit{args}\rangle}$ 

Establishes a context for \comp. Stores the URI in a variable so that \comp knows which symbol governs the current notation.

\comp
\compemph
\compemph@uri
\defemph
\defemph@uri
\symrefemph
\symrefemph

 $\operatorname{\backslash comp}\{\langle args \rangle\}$ 

Marks  $\langle args \rangle$  as a notation component of the current symbol for highlighting, linking, etc.

The precise behavior is governed by  $\comp$ , which takes as additional argument the URI of the current symbol. By default,  $\comp$  adds the URI as a PDF tooltip and colors the highlighted part in blue.

 $\ensuremath{\verb|Qdefemph|}$  behaves like  $\ensuremath{\verb|Qcomp|}$ , and can be similarly redefined, but marks an expression as definiendum (used by  $\ensuremath{\verb|Qdefiniendum|}$ )

\STEXinvisible

Exports its argument as OMDoc (invisible), but does not produce PDF output. Useful e.g. for semantic macros that take arguments that are not part of the symbolic notation.

# STEX-Proofs: Structural Markup for Proofs

The sproof package is part of the STEX collection, a version of TEX/LATEX that allows to markup TEX/LATEX documents semantically without leaving the document format, essentially turning TEX/LATEX into a document format for mathematical knowledge management (MKM).

This package supplies macros and environment that allow to annotate the structure of mathematical proofs in  $ST_EX$  files. This structure can be used by MKM systems for added-value services, either directly from the  $ST_EX$  sources, or after translation.

## Contents

#### 11.1 Introduction

The sproof (semantic proofs) package supplies macros and environment that allow to annotate the structure of mathematical proofs in STEX files. This structure can be used by MKM systems for added-value services, either directly from the STEX sources, or after translation. Even though it is part of the STEX collection, it can be used independently, like it's sister package statements.

STEX is a version of TEX/ETEX that allows to markup TEX/ETEX documents semantically without leaving the document format, essentially turning TEX/ETEX into a document format for mathematical knowledge management (MKM).

```
\begin{sproof}[id=simple-proof,for=sum-over-odds]
   {We prove that \sum_{i=1}^{n} (2i-1)=n^{2} by induction over n}
  \begin{spfcases}{For the induction we have to consider the following cases:}
   \begin{spfcase}{$n=1$}
    \begin{spfstep}[display=flow] then we compute $1=1^2$\end{spfstep}
  \end{spfcase}
  \begin{spfcase}{$n=2$}
     \begin{sproofcomment}[display=flow]
       This case is not really necessary, but we do it for the
       fun of it (and to get more intuition).
     \end{sproofcomment}
     \end{spfcase}
   \begin{spfcase}{$n>1$}
     \begin{spfstep}[type=assumption,id=ind-hyp]
       Now, we assume that the assertion is true for a certain $k\geq 1$,
       i.e. \sum_{i=1}^k{(2i-1)}=k^{2}.
     \end{spfstep}
     \begin{sproofcomment}
       We have to show that we can derive the assertion for $n=k+1$ from
       this assumption, i.e. \sum_{i=1}^{k+1}{(2i-1)}=(k+1)^{2}.
     \end{sproofcomment}
     \begin{spfstep}
       We obtain \sum_{i=1}^{k+1}{2i-1}=\sum_{i=1}^{k}{2i-1}+2(k+1)-1
       \begin{justification} [method=arith:split-sum]
         by splitting the sum.
       \end{justification}
      \end{spfstep}
     \begin{spfstep}
       Thus we have \sum_{i=1}^{k+1}{(2i-1)}=k^2+2k+1
       \begin{justification} [method=fertilize]
         by inductive hypothesis.
       \end{justification}
      \end{spfstep}
     \begin{spfstep}[type=conclusion]
       We can \ensuremath{\verb|begin{justification}| [method=simplify] simplify\end{justification}}
       the right-hand side to {k+1}^2, which proves the assertion.
     \end{spfstep}
   \end{spfcase}
    \begin{spfstep}[type=conclusion]
     We have considered all the cases, so we have proven the assertion.
   \end{spfstep}
 \end{spfcases}
\end{sproof}
```

Example 1: A very explicit proof, marked up semantically

We will go over the general intuition by way of our running example (see Figure 1 for the source and Figure 2 for the formatted result).<sup>4</sup>

<sup>&</sup>lt;sup>4</sup>EDNOTE: talk a bit more about proofs and their structure,... maybe copy from OMDoc spec.

#### 11.2 The User Interface

#### 11.2.1 Package Options

showmeta

The sproof package takes a single option: showmeta. If this is set, then the metadata keys are shown (see [Kohlhase:metakeys] for details and customization options).

#### 11.2.2 Proofs and Proof steps

sproof

The proof environment is the main container for proofs. It takes an optional KeyVal argument that allows to specify the id (identifier) and for (for which assertion is this a proof) keys. The regular argument of the proof environment contains an introductory comment, that may be used to announce the proof style. The proof environment contains a sequence of \step, proofcomment, and pfcases environments that are used to markup the proof steps. The proof environment has a variant Proof, which does not use the proof end marker. This is convenient, if a proof ends in a case distinction, which brings it's own proof end marker with it. The Proof environment is a variant of proof that does not mark the end of a proof with a little box; presumably, since one of the subproofs already has one and then a box supplied by the outer proof would generate an otherwise empty line. The \spfidea macro allows to give a one-paragraph description of the proof idea.

sProof

\spfidea

(-F----

spfsketch

For one-line proof sketches, we use the \spfsketch macro, which takes the KeyVal argument as sproof and another one: a natural language text that sketches the proof.

spfstep

Regular proof steps are marked up with the step environment, which takes an optional KeyVal argument for annotations. A proof step usually contains a local assertion (the text of the step) together with some kind of evidence that this can be derived from already established assertions.

Note that both \premise and \justarg can be used with an empty second argument to mark up premises and arguments that are not explicitly mentioned in the text.

#### 11.2.3 Justifications

justification

This evidence is marked up with the justification environment in the sproof package. This environment totally invisible to the formatted result; it wraps the text in the proof step that corresponds to the evidence. The environment takes an optional KeyVal argument, which can have the method key, whose value is the name of a proof method (this will only need to mean something to the application that consumes the semantic annotations). Furthermore, the justification can contain "premises" (specifications to assertions that were used justify the step) and "arguments" (other information taken into account by the proof method).

\premise

The \premise macro allows to mark up part of the text as reference to an assertion that is used in the argumentation. In the example in Figure 1 we have used the \premise macro to identify the inductive hypothesis.

\justarg

The \justarg macro is very similar to \premise with the difference that it is used to mark up arguments to the proof method. Therefore the content of the first argument is interpreted as a mathematical object rather than as an identifier as in the case of \premise. In our example, we specified that the simplification should take place on the right hand side of the equation. Other examples include proof methods that instantiate. Here we would indicate the substituted object in a \justarg macro.

**Proof**: We prove that  $\sum_{i=1}^{n} 2i - 1 = n^2$  by induction over nP.1 For the induction we have to consider the following cases: **P.1.1** n = 1: then we compute  $1 = 1^2$ **P.1.1** n=2: This case is not really necessary, but we do it for the fun of it (and to get more intuition). We compute  $1+3=2^2=4$ **P.1.1** n > 1: **P.1.1.1** Now, we assume that the assertion is true for a certain  $k \geq 1$ , i.e.  $\sum_{i=1}^k (2i-1) = k^2$ . **P.1.1.1** We have to show that we can derive the assertion for n = k + 1 from this assumption, i.e.  $\sum_{i=1}^{k+1} (2i-1) = (k+1)^2$ . **P.1.1.1** We obtain  $\sum_{i=1}^{k+1} (2i-1) = \sum_{i=1}^{k} (2i-1) + 2(k+1) - 1$  by splitting the sum **P.1.1.1** Thus we have  $\sum_{i=1}^{k+1} (2i-1) = k^2 + 2k + 1$  by inductive hypothesis. **P.1.1.1** We can simplify the right-hand side to  $(k+1)^2$ , which proves the assertion.  $\square$ **P.1.1** We have considered all the cases, so we have proven the assertion. 

Example 2: The formatted result of the proof in Figure 1

#### **Proof Structure** 11.2.4

subproof

method

spfcases

spfcase

\spfcasesketch

sproofcomment

The pfcases environment is used to mark up a subproof. This environment takes an optional KeyVal argument for semantic annotations and a second argument that allows to specify an introductory comment (just like in the proof environment). The method key can be used to give the name of the proof method executed to make this subproof.

The pfcases environment is used to mark up a proof by cases. Technically it is a variant of the subproof where the method is by-cases. Its contents are spfcase environments that mark up the cases one by one.

The content of a pfcases environment are a sequence of case proofs marked up in the pfcase environment, which takes an optional KeyVal argument for semantic annotations. The second argument is used to specify the the description of the case under consideration. The content of a pfcase environment is the same as that of a proof, i.e. steps, proofcomments, and pfcases environments. \spfcasesketch is a variant of the spfcase environment that takes the same arguments, but instead of the spfsteps in the body uses a third argument for a proof sketch.

The proofcomment environment is much like a step, only that it does not have an object-level assertion of its own. Rather than asserting some fact that is relevant for the proof, it is used to explain where the proof is going, what we are attempting to to, or what we have achieved so far. As such, it cannot be the target of a \premise.

#### 11.2.5 Proof End Markers

Traditionally, the end of a mathematical proof is marked with a little box at the end of the last line of the proof (if there is space and on the end of the next line if there isn't), like so:

\sproofend

\sProofEndSymbol

The sproof package provides the \sproofend macro for this. If a different symbol for the proof end is to be used (e.g. q.e.d), then this can be obtained by specifying it using the \sProofEndSymbol configuration macro (e.g. by specifying \sProofEndSymbol{q.e.d}).

Some of the proof structuring macros above will insert proof end symbols for subproofs, in most cases, this is desirable to make the proof structure explicit, but sometimes this wastes space (especially, if a proof ends in a case analysis which will supply its own proof end marker). To suppress it locally, just set proofend={} in them or use use \sProofEndSymbol{}.

#### 11.2.6 Configuration of the Presentation

Finally, we provide configuration hooks in Figure 1 for the keywords in proofs. These are mainly intended for package authors building on statements, e.g. for multi-language support.<sup>5</sup>. The proof step labels can be customized via the \pstlabelstyle macro:

Environment	configuration macro	value
sproof	\spf@proof@kw	Proof
sketchproof	\spf@sketchproof@kw	ProofSketch

Figure 1: Configuration Hooks for Semantic Proof Markup

\pstlabelstyle

\pstlabelstyle{\langle style\rangle} sets the style; see Figure 2 for an overview of styles. Package writers can add additional styles by adding a macro \pst@make@label@\langle style\rangle that takes two arguments: a comma-separated list of ordinals that make up the prefix and the current ordinal. Note that comma-separated lists can be conveniently iterated over by the LATEX \@for...:=...\do{...} macro; see Figure 2 for examples.

style	example	configuration macro
long	0.8.1.5	$\label@long#1#2{\@for\@I:=#1\do{\@I.}#2}$
angles	$\rangle\rangle\rangle$ 5	\def\pst@make@label@angles#1#2
		${\tt \{\ensuremath}\ensuremath{\ensuremath}\ensuremath}\ensuremath}$
short	5	\def\pst@make@label@short#1#2{#2}
empty		\def\pst@make@label@empty#1#2{}

Figure 2: Configuration Proof Step Label Styles

#### 11.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STEX issue tracker at [sTeX].

EdN:5

 $<sup>^{5}\</sup>mathrm{EdNote}$ : we might want to develop an extension sproof-babel in the future.

- 1. The numbering scheme of proofs cannot be changed. It is more geared for teaching proof structures (the author's main use case) and not for writing papers. reported by Tobias Pfeiffer (fixed)
- 2. currently proof steps are formatted by the LATEX description environment. We would like to configure this, e.g. to use the inparaenum environment for more condensed proofs. I am just not sure what the best user interface would be I can imagine redefining an internal environment spf@proofstep@list or adding a key prooflistenv to the proof environment that allows to specify the environment directly. Maybe we should do both.

# STEX-Metatheory

The default meta theory for an STEX module. Contains symbols so ubiquitous, that it is virtually impossible to describe any flexiformal content without them, or that are required to annotate even the most primitive symbols with meaningful (foundation-independent) "type"-annotations, or required for basic structuring principles (theorems, definitions).

Foundations should ideally instantiate these symbols with their formal counterparts, e.g. isa corresponds to a typing operation in typed setting, or the  $\in$ -operator in settheoretic contexts; bind corresponds to a universal quantifier in (nth-order) logic, or a  $\Pi$  in dependent type theories.

# document-structure.sty: Semantic Markup for Open Mathematical Documents in IATEX

The omdoc package is part of the STEX collection, a version of TEX/IATEX that allows to markup TEX/IATEX documents semantically without leaving the document format, essentially turning TEX/IATEX into a document format for mathematical knowledge management (MKM).

This package supplies an infrastructure for writing OMDoc documents in LATEX. This includes a simple structure sharing mechanism for STEX that allows to to move from a copy-and-paste document development model to a copy-and-reference model, which conserves space and simplifies document management. The augmented structure can be used by MKM systems for added-value services, either directly from the STEX sources, or after translation.

#### 14.1 Introduction

STEX is a version of TEX/LATEX that allows to markup TEX/LATEX documents semantically without leaving the document format, essentially turning TEX/LATEX into a document format for mathematical knowledge management (MKM). The package supports direct translation to the OMDoc format [Koh06]

The omdoc package supplies macros and environments that allow to label document fragments and to reference them later in the same document or in other documents. In essence, this enhances the document-as-trees model to documents-as-directed-acyclic-graphs (DAG) model. This structure can be used by MKM systems for added-value services, either directly from the STEX sources, or after translation. Currently, transdocument referencing provided by this package can only be used in the STEX collection.

DAG models of documents allow to replace the "Copy and Paste" in the source document with a label-and-reference model where document are shared in the document

source and the formatter does the copying during document formatting/presentation.<sup>6</sup>

#### 14.2 The User Interface

The omdoc package generates two files: omdoc.cls, and omdoc.sty. The OMDoc class is a minimally changed variant of the standard article class that includes the functionality provided by omdoc.sty. The rest of the documentation pertains to the functionality introduced by omdoc.sty.

#### 14.2.1 Package and Class Options

The omdoc class accept the following options:

$class=\langle name \rangle$	$load \langle name \rangle.cls instead of article.cls$
$topsect=\langle sect \rangle$	The top-level sectioning level; the default for $\langle sect \rangle$ is section
showignores	show the the contents of the ignore environment after all
showmeta	show the metadata; see metakeys.sty
showmods	show modules; see modules.sty
extrefs	allow external references; see sref.sty
defindex	index definienda; see statements.sty
minimal	for testing; do not load any STEX packages

The omdoc package accepts the same except the first two.

#### 14.2.2 Document Structure

document documentkeys

The top-level document environment can be given key/value information by the \documentkeys macro in the preamble<sup>2</sup>. This can be used to give metadata about the document. For the moment only the id key is used to give an identifier to the omdoc element resulting from the LATEXML transformation.

omgroup

The structure of the document is given by the omgroup environment just like in OM-Doc. In the LATEX route, the omgroup environment is flexibly mapped to sectioning commands, inducing the proper sectioning level from the nesting of omgroup environments. Correspondingly, the omgroup environment takes an optional key/value argument for metadata followed by a regular argument for the (section) title of the omgroup. The optional metadata argument has the keys id for an identifier, creators and contributors for the Dublin Core metadata [DCM03]; see [Koh20a] for details of the format. The short allows to give a short title for the generated section. If the title contains semantic macros, they need to be protected by \protect, and we need to give the loadmodules

creators
contributors
short
loadmodules

\begin{module}{foo}
\symdef{bar}{B^a\_r}

. . .

\begin{omgroup}[id=sec.barderiv,loadmodules]{Introducing \$\protect\bar\$ Derivations}

STEX automatically computes the sectioning level, from the nesting of omgroup environments. But sometimes, we want to skip levels (e.g. to use a subsection\* as an introduction for a chapter). Therefore the omdoc package provides a variant blindomgroup

blindomgroup

key it needs no value. For instance we would have

<sup>&</sup>lt;sup>6</sup>EDNOTE: integrate with latexml's XMRef in the Math mode.

 $<sup>^{2}</sup>$ We cannot patch the document environment to accept an optional argument, since other packages we load already do; pity.

that does not produce markup, but increments the sectioning level and logically groups document parts that belong together, but where traditional document markup relies on convention rather than explicit markup. The blindomgroup environment is useful e.g. for creating frontmatter at the correct level. Example 3 shows a typical setup for the outer document structure of a book with parts and chapters. We use two levels of blindomgroup:

- The outer one groups the introductory parts of the book (which we assume to have a sectioning hierarchy topping at the part level). This blindomgroup makes sure that the introductory remarks become a "chapter" instead of a "part".
- Th inner one groups the frontmatter<sup>3</sup> and makes the preface of the book a section-level construct. Note that here the display=flow on the omgroup environment prevents numbering as is traditional for prefaces.

```
\begin{document}
\begin{blindomgroup}
\begin{blindomgroup}
\begin{frontmatter}
\maketitle\newpage
\begin{omgroup}[display=flow]{Preface}
... <<pre><<pre>c<<pre>
\end{omgroup}
\clearpage\setcounter{tocdepth}{4}\tableofcontents\clearpage
\end{frontmatter}
\end{blindomgroup}
... <<introductory remarks>> ...
\end{blindomgroup}
\begin{omgroup}{Introduction}
... <<intro>> ...
\end{omgroup}
... <<more chapters>> ...
\bibliographystyle{alpha}\bibliography{kwarc}
```

\end{document} Example 3: A typical Document Structure of a Book

\skipomgroup

The \skipomgroup "skips an omgroup", i.e. it just steps the respective sectioning counter. This macro is useful, when we want to keep two documents in sync structurally, so that section numbers match up: Any section that is left out in one becomes a \skipomgroup.

\currentsectionlevel \CurrentSectionLevel The \currentsectionlevel macro supplies the name of the current sectioning level, e.g. "chapter", or "subsection". \CurrentSectionLevel is the capitalized variant. They are useful to write something like "In this \currentsectionlevel, we will..." in an omgroup environment, where we do not know which sectioning level we will end up.

#### 14.2.3 Ignoring Inputs

ignore showignores

The ignore environment can be used for hiding text parts from the document structure. The body of the environment is not PDF or DVI output unless the showignores option

<sup>&</sup>lt;sup>3</sup>We shied away from redefining the **frontmatter** to induce a blindomgroup, but this may be the "right" way to go in the future.

is given to the omdoc class or package. But in the generated OMDoc result, the body is marked up with a ignore element. This is useful in two situations. For

editing One may want to hide unfinished or obsolete parts of a document

narrative/content markup In STEX we mark up narrative-structured documents. In the generated OMDoc documents we want to be able to cache content objects that are not directly visible. For instance in the statements package [Koh20d] we use the \inlinedef macro to mark up phrase-level definitions, which verbalize more formal definitions. The latter can be hidden by an ignore and referenced by the verbalizes key in \inlinedef.

\prematurestop

\afterprematurestop

For prematurely stopping the formatting of a document, STEX provides the \prematurestop macro. It can be used everywhere in a document and ignores all input after that – backing out of the omgroup environment as needed. After that – and before the implicit \end{document} it calls the internal \afterprematurestop, which can be customized to do additional cleanup or e.g. print the bibliography.

\prematurestop is useful when one has a driver file, e.g. for a course taught multiple years and wants to generate course notes up to the current point in the lecture. Instead of commenting out the remaining parts, one can just move the \prematurestop macro. This is especially useful, if we need the rest of the file for processing, e.g. to generate a theory graph of the whole course with the already-covered parts marked up as an overview over the progress; see import\_graph.py from the lmhtools utilities [LMH].

#### 14.2.4 Structure Sharing

\STRlabel
\STRcopy

The \STRlabel macro takes two arguments: a label and the content and stores the the content for later use by \STRcopy[ $\langle URL \rangle$ ] { $\langle label \rangle$ }, which expands to the previously stored content. If the \STRlabel macro was in a different file, then we can give a URL  $\langle URL \rangle$  that lets LATEXML generate the correct reference.

\STRsemantics

EdN:7

The \STRlabel macro has a variant \STRsemantics, where the label argument is optional, and which takes a third argument, which is ignored in LATEX. This allows to specify the meaning of the content (whatever that may mean) in cases, where the source document is not formatted for presentation, but is transformed into some content markup format.<sup>7</sup>

#### 14.2.5 Global Variables

Text fragments and modules can be made more re-usable by the use of global variables. For instance, the admin section of a course can be made course-independent (and therefore re-usable) by using variables (actually token registers) courseAcronym and courseTitle instead of the text itself. The variables can then be set in the STEX preamble of the course notes file.  $\setSGvar\{\langle vname \rangle\}\{\langle text \rangle\}$  to set the global variable  $\langle vname \rangle$  to  $\langle text \rangle$  and  $\setup useSGvar\{\langle vname \rangle\}$  to reference it.

\setSGvar \useSGvar \ifSGvar

With \ifSGvar we can test for the contents of a global variable: the macro call \ifSGvar{ $\langle vname \rangle$ }{ $\langle val \rangle$ }{ $\langle ctext \rangle$ } tests the content of the global variable  $\langle vname \rangle$ , only if (after expansion) it is equal to  $\langle val \rangle$ , the conditional text  $\langle ctext \rangle$  is formatted.

<sup>&</sup>lt;sup>7</sup>EDNOTE: document LMID und LMXREf here if we decide to keep them.

#### 14.2.6 Colors

\blue \red ... For convenience, the omdoc package defines a couple of color macros for the color package: For instance \blue abbreviates \textcolor{blue}, so that \blue{something} writes something in blue. The macros \red \green, \cyan, \magenta, \brown, \yellow, \orange, \gray, and finally \black are analogous.

\black

#### 14.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STEX GitHub repository [sTeX].

1. when option book which uses \pagestyle{headings} is given and semantic macros are given in the omgroup titles, then they sometimes are not defined by the time the heading is formatted. Need to look into how the headings are made.

# Slides and Course Notes

We present a document class from which we can generate both course slides and course notes in a transparent way.

#### 15.1 Introduction

The mikoslides document class is derived from beamer.cls [Tana], it adds a "notes version" for course notes derived from the omdoc class [Kohlhase:smomdl] that is more suited to printing than the one supplied by beamer.cls.

#### 15.2 The User Interface

The mikoslides class takes the notion of a slide frame from Till Tantau's excellent beamer class and adapts its notion of frames for use in the STEXand OMDoc. To support semantic course notes, it extends the notion of mixing frames and explanatory text, but rather than treating the frames as images (or integrating their contents into the flowing text), the mikoslides package displays the slides as such in the course notes to give students a visual anchor into the slide presentation in the course (and to distinguish the different writing styles in slides and course notes).

In practice we want to generate two documents from the same source: the slides for presentation in the lecture and the course notes as a narrative document for home study. To achieve this, the mikoslides class has two modes: *slides mode* and *notes mode* which are determined by the package option.

#### 15.2.1 Package Options

The mikoslides class takes a variety of class options:<sup>8</sup>

slides notes • The options slides and notes switch between slides mode and notes mode (see Section 15.2.2).

sectocframes

• If the option sectocframes is given, then for the omgroups, special frames with the omgroup title (and number) are generated.

EdN:8

showmeta

• showmeta. If this is set, then the metadata keys are shown (see [Koh20b] for details and customization options).

frameimages fiboxed

• If the option frameimages is set, then slide mode also shows the \frameimage-generated frames (see section 15.2.4). If also the fiboxed option is given, the slides are surrounded by a box.

topsect

• topsect= $\langle sect \rangle$  can be used to specify the top-level sectioning level; the default for  $\langle sect \rangle$  is section.

#### 15.2.2 Notes and Slides

frame note

Slides are represented with the frame just like in the beamer class, see [Tanb] for details. The mikoslides class adds the note environment for encapsulating the course note fragments.<sup>4</sup>

Note that it is essential to start and end the notes environment at the start of the line – in particular, there may not be leading blanks – else LATEX becomes confused and throws error messages that are difficult to decipher.

```
\ifnotes\maketitle\else
\frame[noframenumbering]\maketitle\fi

\begin{note}
  We start this course with ...
\end{note}

\begin{frame}
  \frametitle{The first slide}
  ...
\end{frame}
\begin{note}
  ... and more explanatory text
\end{note}

\begin{frame}
  \end{frame}
  \end{frame}

\end{frame}

\begin{frame}
  \end{frame}
  \end{frame}

\cdots
  \end{frame}

\cdots
  \end{frame}

\cdots
  \end{frame}

...
\end{frame}

...
\end{frame}
```

Example 4: A typical Course Notes File

By interleaving the frame and note environments, we can build course notes as shown in Figure 4.

\ifnotes

Note the use of the \ifnotes conditional, which allows different treatment between notes and slides mode – manually setting \notestrue or \notesfalse is strongly discouraged however.

 $<sup>^8\</sup>mathrm{EdNote}$ : leaving out noproblems for the moment until we decide what to do with it.

<sup>&</sup>lt;sup>4</sup>MK: it would be very nice, if we did not need this environment, and this should be possible in principle, but not without intensive LaTeX trickery. Hints to the author are welcome.

A: We need to give the title frame the noframenumbering option so that the frame numbering is kept in sync between the slides and the course notes.

A: The beamer class recommends not to use the allowframebreaks option on frames (even though it is very convenient). This holds even more in the mikoslides case: At least in conjunction with \newpage, frame numbering behaves funnily (we have tried to fix this, but who knows).

\inputref\*

If we want to transclude a the contents of a file as a note, we can use a new variant \inputref\* of the \inputref macro from [KGA20]: \inputref\*{foo} is equivalent to \begin{note}\inputref{foo}\end{note}.

nomtext

There are some environments that tend to occur at the top-level of note environments. We make convenience versions of these: e.g. the nomtext environment is just an omtext inside a note environment (but looks nicer in the source, since it avoids one level of source indenting). Similarly, we have the nomgroup, ndefinition, nexample, nsproof, and nassertion environments.

nomgroup ndefinition nexample nsproof

nassertion

#### 15.2.3 Header and Footer Lines of the Slides

\setslidelogo

The default logo provided by the mikoslides package is the STEX logo it can be customized using  $\ensuremath{\mathtt{Netslidelogo}}\{\langle logo \ name \rangle\}$ .

The default footer line of the mikoslides package mentions copyright and licensing. In the beamer class, \source stores the author's name as the copyright holder. By default it is Michael~Kohlhase in the mikoslides package since he is the main user and designer of this package. \setsource{ $\langle name \rangle$ } can change the writer's name. For licensing, we use the Creative Commons Attribuition-ShareAlike license by default to strengthen the public domain. If package hyperref is loaded, then we can attach a hyperlink to the license logo. \setlicensing[ $\langle url \rangle$ ] { $\langle logo~name \rangle$ } is used for customization, where  $\langle url \rangle$  is optional.

\setsource

\setlicensing

#### 15.2.4 Frame Images

\frameimage

Sometimes, we want to integrate slides as images after all – e.g. because we already have a PowerPoint presentation, to which we want to add STexing X notes. In this case we can use  $frameimage[\langle opt\rangle] \{\langle path\rangle\}$ , where  $\langle opt\rangle$  are the options of includegraphics from the graphicx package [CR99] and  $\langle path\rangle$  is the file path (extension can be left off like in includegraphics). We have added the label key that allows to give a frame label that can be referenced like a regular beamer frame.

\mhframeimage

The \mhframeimage macro is a variant of \frameimage with repository support. Instead of writing

\frameimage{\MathHub{fooMH/bar/source/baz/foobar}}

we can simply write (assuming that \MathHub is defined as above)

\mhframeimage[fooMH/bar]{baz/foobar}

Note that the \mhframeimage form is more semantic, which allows more advanced document management features in MathHub.

If baz/foobar is the "current module", i.e. if we are on the MathHub path ...MathHub/fooMH/bar..., then stating the repository in the first optional argument is redundant, so we can just use

49

EdN:9

 $<sup>^9\</sup>mathrm{EdNote}\colon$  MK: the hyperref link does not seem to work yet. I wonder why but do not have the time to fix it.

\mhframeimage{baz/foobar}

#### 15.2.5 Colors and Highlighting

\textwarning

The \textwarning macro generates a warning sign:

#### 15.2.6 Front Matter, Titles, etc.

#### 15.2.7 Excursions

In course notes, we sometimes want to point to an "excursion" – material that is either presupposed or tangential to the course at the moment – e.g. in an appendix. The typical setup is the following:

\excursion{founif}{\../ex/founif}{We will cover first-order unification in}

\begin{appendix}\printexcursions\end{appendix}

\excursion
\activateexcursion

The \excursion{ $\langle ref \rangle$ }{ $\langle path \rangle$ }{ $\langle text \rangle$ } is syntactic sugar for

\begin{nomtext}[title=Excursion]
 \activateexcursion{founif}{../ex/founif}
 We will cover first-order unification in \sref{founif}.
\end{nomtext}

\activateexcursion \printexcursions

where  $\activateexcursion{\langle path \rangle}$  augments the \printexcursions macro by a call \inputref{\langle path \rangle}. In this way, the 3\printexcursions macro (usually in the appendix) will collect up all excursions that are specified in the main text.

Sometimes, we want to reference – in an excursion – part of another. We can use  $\ensuremath{\mbox{\mbox{-}}}\$  for that.

\excursionref

Finally, we usually want to put the excursions into an omgroup environment and add an introduction, therefore we provide the a variant of the \printexcursions macro: \excursiongroup[id= $\langle id \rangle$ , intro= $\langle path \rangle$ ] is equivalent to

\excursiongroup

\begin{note}
\begin{omgroup}[id=<id>]{Excursions}
 \inputref{<path>}
 \printexcursions
\end{omgroup}
\end{note}

#### 15.2.8 Miscellaneous

#### 15.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STEXGitHub repository [sTeX].

1. when option book which uses \pagestyle{headings} is given and semantic macros are given in the omgroup titles, then they sometimes are not defined by the time the heading is formatted. Need to look into how the headings are made. This is a problem of the underlying omdoc package.

# problem.sty: An Infrastructure for formatting Problems

The problem package supplies an infrastructure that allows specify problems and to reuse them efficiently in multiple environments.

#### 16.1 Introduction

The problem package supplies an infrastructure that allows specify problem. Problems are text fragments that come with auxiliary functions: hints, notes, and solutions<sup>5</sup>. Furthermore, we can specify how long the solution to a given problem is estimated to take and how many points will be awarded for a perfect solution.

Finally, the problem package facilitates the management of problems in small files, so that problems can be re-used in multiple environment.

#### 16.2 The User Interface

#### 16.2.1 Package Options

solutions notes hints gnotes pts min boxed The problem package takes the options solutions (should solutions be output?), notes (should the problem notes be presented?), hints (do we give the hints?), gnotes (do we show grading notes?), pts (do we display the points awarded for solving the problem?), min (do we display the estimated minutes for problem soling). If theses are specified, then the corresponding auxiliary parts of the problems are output, otherwise, they remain invisible.

The boxed option specifies that problems should be formatted in framed boxes so that they are more visible in the text. Finally, the test option signifies that we are in a test situation, so this option does not show the solutions (of course), but leaves space for the students to solve them.

mh showmeta

test

The mh option turns on MathHub support; see [Kohlhase:mss].

Finally, if the showmeta is set, then the metadata keys are shown (see [Kohlhase:metakeys] for details and customization options).

<sup>&</sup>lt;sup>5</sup> for the moment multiple choice problems are not supported, but may well be in a future version

#### 16.2.2 Problems and Solutions

problem

min

title

The main environment provided by the problem package is (surprise surprise) the problem environment. It is used to mark up problems and exercises. The environment takes an optional KeyVal argument with the keys id as an identifier that can be reference later, pts for the points to be gained from this exercise in homework or quiz situations, min for the estimated minutes needed to solve the problem, and finally title for an informative title of the problem. For an example of a marked up problem see Figure 5 and the resulting markup see Figure 6.

```
\usepackage[solutions,hints,pts,min]{problem}
\begin{document}
  \begin{problem}[id=elefants,pts=10,min=2,title=Fitting Elefants]
    How many Elefants can you fit into a Volkswagen beetle?
\begin{hint}
 Think positively, this is simple!
\end{hint}
\begin{exnote}
 Justify your answer
\end{exnote}
\begin{solution}[for=elefants,height=3cm]
 Four, two in the front seats, and two in the back.
\begin{gnote}
 if they do not give the justification deduct 5 pts
\end{gnote}
\end{solution}
  \end{problem}
\end{document}
```

Example 5: A marked up Problem

solution solutions

id for height test The solution environment can be to specify a solution to a problem. If the solutions option is set or \solutionstrue is set in the text, then the solution will be presented in the output. The solution environment takes an optional KeyVal argument with the keys id for an identifier that can be reference for to specify which problem this is a solution for, and height that allows to specify the amount of space to be left in test situations (i.e. if the test option is set in the \usepackage statement).

```
Problem0.0 ()
How many Elefants can you fit into a Volkswagen beetle?

Hint: Think positively, this is simple!

Note: Justify your answer

Solution: Four, two in the front seats, and two in the back.
```

Example 6: The Formatted Problem from Figure 5

hint exnote gnote

The hint and exnote environments can be used in a problem environment to give hints and to make notes that elaborate certain aspects of the problem.

The gnote (grading notes) environment can be used to document situtations that

may arise in grading.

\startsolutions \stopsolutions

Sometimes we would like to locally override the solutions option we have given to the package. To turn on solutions we use the \startsolutions, to turn them off, \stopsolutions. These two can be used at any point in the documents.

Also, sometimes, we want content (e.g. in an exam with master solutions) conditional on whether solutions are shown. This can be done with the \ifsolutions conditional.

\ifsolutions

#### 16.2.3 Multiple Choice Blocks

mcb \mcc Multiple choice blocks can be formatted using the mcb environment, in which single choices are marked up with  $\mbox{mcc}[\langle keyvals \rangle] \{\langle text \rangle\}$  macro, which takes an optional key/value argument  $\langle keyvals \rangle$  for choice metadata and a required argument  $\langle text \rangle$  for the proposed answer text. The following keys are supported

T F Ttext Ftext feedback

- T for true answers, F for false ones,
- Ttext the verdict for true answers, Ftext for false ones, and
- feedback for a short feedback text given to the student.

See Figure ?? for an example

#### 16.2.4 Including Problems

\includeproblem

The \includeproblem macro can be used to include a problem from another file. It takes an optional KeyVal argument and a second argument which is a path to the file containing the problem (the macro assumes that there is only one problem in the include file). The keys title, min, and pts specify the problem title, the estimated minutes for solving the problem and the points to be gained, and their values (if given) overwrite the ones specified in the problem environment in the included file.

title min pts

#### 16.2.5 Reporting Metadata

The sum of the points and estimated minutes (that we specified in the pts and min keys to the problem environment or the \includeproblem macro) to the log file and the screen after each run. This is useful in preparing exams, where we want to make sure that the students can indeed solve the problems in an allotted time period.

The \min and \pts macros allow to specify (i.e. to print to the margin) the distribution of time and reward to parts of a problem, if the pts and pts package options are set. This allows to give students hints about the estimated time and the points to be awarded.

#### 16.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STEXGitHub repository [sTeX].

Example 7: A Problem with a multiple choice block

# hwexam.sty/cls: An Infrastructure for formatting Assignments and Exams

The hwexam package and class allows individual course assignment sheets and compound assignment documents using problem files marked up with the problem package.

#### Contents

#### 17.1 Introduction

The hwexam package and class supplies an infrastructure that allows to format nice-looking assignment sheets by simply including problems from problem files marked up with the problem package [Kohlhase:problem]. It is designed to be compatible with problems.sty, and inherits some of the functionality.

#### 17.2 The User Interface

#### 17.2.1 Package and Class Options

The hwexam package and class take the options solutions, notes, hints, gnotes, pts, min, and boxed that are just passed on to the problems package (cf. its documentation for a description of the intended behavior).

showmeta

If the **showmeta** option is set, then the metadata keys are shown (see [**Kohlhase:metakeys**] for details and customization options).

The hwexam class additionally accepts the options report, book, chapter, part, and showignores, of the omdoc package [Kohlhase:smomdl] on which it is based and passes them on to that. For the extrefs option see [Kohlhase:sref].

#### 17.2.2 Assignments

assignment number

title type given due This package supplies the assignment environment that groups problems into assignment sheets. It takes an optional KeyVal argument with the keys number (for the assignment number; if none is given, 1 is assumed as the default or — in multi-assignment documents — the ordinal of the assignment environment), title (for the assignment title; this is referenced in the title of the assignment sheet), type (for the assignment type; e.g. "quiz", or "homework"), given (for the date the assignment was given), and due (for the date the assignment is due).

#### 17.2.3 Typesetting Exams

multiple

Furthermore, the hwexam package takes the option multiple that allows to combine multiple assignment sheets into a compound document (the assignment sheets are treated as section, there is a table of contents, etc.).

test

Finally, there is the option test that modifies the behavior to facilitate formatting tests. Only in test mode, the macros \testspace, \testnewpage, and \testemptypage have an effect: they generate space for the students to solve the given problems. Thus they can be left in the LATEX source.

\testspace \testnewpage \testemptypage \testspace takes an argument that expands to a dimension, and leaves vertical space accordingly. \testnewpage makes a new page in test mode, and \testemptypage generates an empty page with the cautionary message that this page was intentionally left empty.

testheading duration min reqpts

Finally, the \testheading takes an optional keyword argument where the keys duration specifies a string that specifies the duration of the test, min specifies the equivalent in number of minutes, and reqpts the points that are required for a perfect grade.

#### 17.2.4 Including Assignments

\inputassignment

number title type given due The \inputassignment macro can be used to input an assignment from another file. It takes an optional KeyVal argument and a second argument which is a path to the file containing the problem (the macro assumes that there is only one assignment environment in the included file). The keys number, title, type, given, and due are just as for the assignment environment and (if given) overwrite the ones specified in the assignment environment in the included file.

#### 17.3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STEXGitHub repository [sTeX].

1. none reported yet.

\title{320101 General Computer Science (Fall 2010)} \begin{testheading}[duration=one hour,min=60,reqpts=27] Good luck to all students! \end{testheading} formats to

Name:

MatriculationNumber:

#### 320101 General Computer Science (Fall 2010)

2022-01-23

#### You have 60minutes (sharp) for the test;

Write the solutions to the sheet.

The estimated time for solving this exam is 58 minutes, leaving you 2 minutes for revising your exam.

You can reach 30 points if you solve all problems. You will only need 27 points for a perfect score, i.e. 3 points are bonus points.

You have ample time, so take it slow and avoid rushing to mistakes!

Different problems test different skills and knowledge, so do not get stuck on one problem.

\stex\_annotate:anw \stex\_annotate\_invisible:nn \stex\_annotate\_invisible:nnn We define four macros for introducing attributes in the HTML output. The definitions depend on the "backend" used (LATEXML, RusTeX, pdflatex).

The pdflatex-macros largely do nothing; the RusTEX-implementations are pretty clear in what they do, the LATEXML-implementations resort to perl bindings.

#### 19.3 File Hooks and Tracking

```
385 (@@=stex_files)
```

We introduce hooks for file inputs that keep track of the absolute paths of files used. This will be useful to keep track of modules, their archives, namespaces etc.

Note that the absolute paths are only accurate in \input-statements for paths relative to the PWD, so they shouldn't be relied upon in any other setting than for STEX-purposes.

purposes.
keeps track of file changes

386 \seq\_gclear\_new:N\g\_\_stex\_files\_stack

(End definition for \g\_\_stex\_files\_stack.)

\c\_stex\_mainfile\_seq
\c\_stex\_mainfile\_str

387 \str\_set:Nx \c\_stex\_mainfile\_str {\c\_stex\_pwd\_str/\jobname.tex}

# The Implementation

### 27.1 Package Options

We declare some switches which will modify the behavior according to the package options. Generally, an option xxx will just set the appropriate switches to true (otherwise they stay false).

#### 27.2 Proofs

We first define some keys for the proof environment.

```
3592 \keys_define:nn { stex / spf } {
                 .str_set_x:N = \l__stex_sproof_spf_id_str,
3593
     id
                 .tl_set:N
                                = \l__stex_sproof_spf_display_tl,
     display
3594
                 .tl_set:N
     for
                                = \l__stex_sproof_spf_for_tl ,
3595
                                = \l__stex_sproof_spf_from_tl
                 .tl_set:N
     from
3596
                 .tl_set:N
                                = \l_stex_sproof_spf_proofend_tl,
     proofend
3597
                 .tl_set:N

```

\spf@flow We define this macro, so that we can test whether the display key has the value flow
3617 \def\spf@flow{flow}

(End definition for \spf@flow. This function is documented on page ??.)

For proofs, we will have to have deeply nested structures of enumerated list-like environments. However, IATEX only allows enumerate environments up to nesting depth 4 and general list environments up to listing depth 6. This is not enough for us. Therefore we have decided to go along the route proposed by Leslie Lamport to use a single top-level list with dotted sequences of numbers to identify the position in the proof tree. Unfortunately, we could not use his pf.sty package directly, since it does not do automatic numbering, and we have to add keyword arguments all over the place, to accommodate semantic information.

pst@with@label

This environment manages<sup>6</sup> the path labeling of the proof steps in the description environment of the outermost proof environment. The argument is the label prefix up to now; which we cache in \pst@label (we need evaluate it first, since are in the right place now!). Then we increment the proof depth which is stored in \cunt10 (lower counters are used by TeX for page numbering) and initialize the next level counter \cunt10 with 1. In the end call for this environment, we just decrease the proof depth counter by 1 again.

```
3618 \newcount\count_ten
3619 \newenvironment{pst@with@label}[1]{
3620  \edef\pst@label{#1}
3621  \advance\count_ten by 1\relax
3622  \count_ten=1
3623 }{
3624  \advance\count_ten by -1\relax
3625 }
```

\the@pst@label

\the@pst@label evaluates to the current step label.

```
3626 \def\the@pst@label{
3627 \pst@make@label\pst@label{\number\count_ten}\l__stex_sproof_pstlabel_postfix_tl
3628 }
```

 $(\mathit{End \ definition \ for \ } \verb|\theOpstOlabel|. \ \mathit{This \ function \ is \ documented \ on \ page \ \ref{eq:condition}.)|)$ 

\setpstlabelstyle

\setpstlabelstyle{metaKey-Val pairs} makes the labeling style customizable. \setpstlabelstyle{primal will change the labeling style from P.1.2.3 to Pr-1-2-3†. \setpstlabelstyledefault will set the labeling style back to default.

<sup>&</sup>lt;sup>6</sup>This gets the labeling right but only works 8 levels deep

```
\tl_set:Nn \l__stex_sproof_pstlabel_prefix_tl {P}
                                      3635
                                                  \tl_set:Nn \l__stex_sproof_pstlabel_delimiter_tl {.}

The next two environments (proof steps) and comments, are mostly semantical, they take KeyVal arguments that specify their semantic role. In draft mode, they read these values and show them. If the surrounding proof had display=flow, then no new \item is generated, otherwise it is. In any case, the proof step number (at the current level) is incremented.

#### 27.3 Justifications

\next@pst@label

3826 }%

\end{subproof}

We define the actions that are undertaken, when the keys for justifications are encountered. Here this is very simple, we just define an internal macro with the value, so that we can use it later.

The next three environments and macros are purely semantic, so we ignore the keyval arguments for now and only display the content.  $^{14}$ 

 $<sup>^{14}\</sup>mathrm{EdNote}$ : need to do something about the premise in draft mode.

```
justification

3833 \newenvironment{justification}[1][]{}{}

\premise

3834 \newcommand\premise[2][]{#2}

(End definition for \premise. This function is documented on page ??.)

\justarg the \justarg macro is purely semantic, so we ignore the keyval arguments for now and only display the content.

3835 \newcommand\justarg[2][]{#2}

3836 \langle /package \rangle

(End definition for \justarg. This function is documented on page ??.)

Some auxiliary code, and clean up to be executed at the end of the package.

# document-structure.sty Implementation

#### 31.1 The OMDoc Class

The functionality is spread over the omdoc class and package. The class provides the document environment and the omdoc element corresponds to it, whereas the package provides the concrete functionality.

```
4020 
4021 \RequirePackage{13keys2e,expl-keystr-compat}
4021 \RequirePackage{13keys2e,expl-keystr-compat}
4021 \RequirePackage{13keys2e,expl-keystr-compat}
4022 \RequirePackage{13keys2e,expl-keystr-compat}
4021 \RequirePackage{13keys2e,expl-keystr-compat}
4022 \RequirePackage{13keys2e,expl-keystr-compat}
4023 \RequirePackage{13keys2e,expl-keystr-compat}
4024 \RequirePackage{13keys2e,expl-keystr-compat}
4025 \RequirePackage{13keys2e,expl-keystr-compat}
4026 \RequirePackage{13keys2e,expl-keystr-compat}
4027 \RequirePackage{13keys2e,expl-keystr-compat}
4028 \RequirePackage{13keys2e,expl-keystr-compat}
4029 \RequirePackage{13keys2e,expl-keystr-compat}
4029 \RequirePackage{13keys2e,expl-keystr-compat}
4020 \RequirePackage{13keys2e,expl-keystr-compat}
4020 \RequirePackage{13keys2e,expl-keystr-compat}
4021 \RequirePackage{13keys2e,expl-
```

## 31.2 Class Options

\omdoc@cls@class

To initialize the omdoc class, we declare and process the necessary options using the kvoptions package for key/value options handling. For omdoc.cls this is quite simple. We have options report and book, which set the \omdoc@cls@class macro and pass on the macro to omdoc.sty for further processing.

```
\keys_define:nn{ document-structure / pkg }{
     class
                  .str_set_x:N = \c_document_structure_class_str,
4025
     minimal
                  .bool_set:N
                               = \c_document_structure_minimal_bool,
4026
       \ClassWarning{omdoc}{the option 'report' is deprecated, use 'class=report', instead}
4027
       \str_set:Nn \c_document_structure_class_str {report}
4028
     },
4029
                  .code:n
4030
       \ClassWarning{omdoc}{the option 'book' is deprecated, use 'class=book', instead}
4031
       \str_set:Nn \c_document_structure_class_str {book}
4032
4033
     bookpart
                  .code:n
4034
       \ClassWarning{omdoc}{the option 'bookpart' is deprecated, use 'class=book,topsect=chapte
       \str_set:Nn \c_document_structure_class_str {book}
4036
       \str_set:Nn \c_document_structure_topsect_str {chapter}
4037
     },
4038
```

```
4039
                   .str_set_x:N = \c_document_structure_docopt_str,
                                 = {
                  .code:n
4040
     unknown
        \PassOptionsToPackage{ \CurrentOption }{ omdoc }
4041
4042
4043 }
    \ProcessKeysOptions{ document-structure / pkg }
4044
    \str_if_empty:NT \c_document_structure_class_str {
4045
      \str_set:Nn \c_document_structure_class_str {article}
4046
   \exp_after:wN\LoadClass\exp_after:wN[\c_document_structure_docopt_str]
     {\c_document_structure_class_str}
4050
```

## 31.3 Beefing up the document environment

Now, - unless the option minimal is defined - we include the stex package

```
4051 \RequirePackage{omdoc}
4052 \bool_if:NF \c_document_structure_minimal_bool {
4053 \RequirePackage{stex-compatibility}
```

And define the environments we need. The top-level one is the document environment, which we redefined so that we can provide keyval arguments.

document

For the moment we do not use them on the LATEX level, but the document identifier is picked up by LATEXML. 15

```
\keys_define:nn { document-structure / document }{
     id .str_set_x:N = \c_document_structure_document_id_str
4055
4056 }
   \let\__document_structure_orig_document=\document
4057
   \renewcommand{\document}[1][]{
4058
      \keys_set:nn{ document-structure / document }{ #1 }
4059
     \stex_ref_new_doc_target:n { \c_document_structure_document_id_str }
4060
      \__document_structure_orig_document
4061
    Finally, we end the test for the minimal option.
4063 }
4064 (/cls)
```

## 31.4 Implementation: OMDoc Package

```
4065 (*package)
4066 \ProvidesExplPackage{omdoc}{2020/10/19}{1.4}{OMDoc document Structure}
4067 \RequirePackage{expl-keystr-compat,13keys2e}
```

## 31.5 Package Options

We declare some switches which will modify the behavior according to the package options. Generally, an option xxx will just set the appropriate switches to true (otherwise they stay false).

EdN:15

<sup>&</sup>lt;sup>15</sup>Ednote: faking documentkeys for now. @HANG, please implement

```
4068
   \keys_define:nn{ document-structure / pkg }{
4069
                  .str_set_x:N = \c_document_structure_class_str,
4070
                  .str_set_x:N = \c_document_structure_topsect_str,
     topsect
4071
      showignores .bool_set:N
                                 = \c_document_structure_showignores_bool,
4072
4073
   \ProcessKeysOptions{ document-structure / pkg }
4074
    \str_if_empty:NT \c_document_structure_class_str {
     \str_set:Nn \c_document_structure_class_str {article}
4077
4078
   \str_if_empty:NT \c_document_structure_topsect_str {
     \str_set:Nn \c_document_structure_topsect_str {section}
4079
4080 }
    Then we need to set up the packages by requiring the sref package to be loaded.
   \RequirePackage{xspace}
   \RequirePackage{comment}
   \@ifpackageloaded{babel}{}{\RequirePackage[base]{babel}}
    We set up triggers for the other languages, currently only German.
   \@ifpackageloaded{babel}{
       \clist_set:Nx \l_tmpa_clist {\bbl@loaded}
4085
       \clist_if_in:NnT \l_tmpa_clist {ngerman}{
4086
          \input{omdoc-ngerman.ldf}
4087
4088
4089 }{}
4090 %\AfterBabelLanguage{ngerman}{\input{omdoc-ngerman.ldf}}
```

\section@level

Finally, we set the \section@level macro that governs sectioning. The default is two (corresponding to the article class), then we set the defaults for the standard classes book and report and then we take care of the levels passed in via the topsect option.

```
\int_new:N \l_document_structure_section_level_int
   \str_case:VnF \c_document_structure_topsect_str {
4092
      {part}{
4093
        \int_set:Nn \l_document_structure_section_level_int {0}
4094
4095
      {chapter}{
4096
        \int_set:Nn \l_document_structure_section_level_int {1}
4097
     }
4098
      \str_case:VnF \c_document_structure_class_str {
4100
4101
        {book}{
          \int_set:Nn \l_document_structure_section_level_int {0}
4102
       }
4103
        {report}{
4104
          \int_set:Nn \l_document_structure_section_level_int {0}
4105
4106
     }{
4107
        \int_set:Nn \l_document_structure_section_level_int {2}
4108
     }
4109
4110 }
```

#### 31.6 Document Structure

The structure of the document is given by the omgroup environment just like in OMDoc. The hierarchy is adjusted automatically according to the LATEX class in effect.

\currentsectionlevel

EdN:16

For the \currentsectionlevel and \Currentsectionlevel macros we use an internal macro \current@section@level that only contains the keyword (no markup). We initialize it with "document" as a default. In the generated OMDoc, we only generate a text element of class omdoc\_currentsectionlevel, wich will be instantiated by CSS later. <sup>16</sup>

- 4111 \def\current@section@level{document}%
- $\verb|\lambda| lem: the weak of the command current section level $$ \arrange expand for the current section level $$ \arrange expand for the current section section $$ \arrange expand for the current section $$ \arrange expand for the curren$
- 4113 \newcommand\Currentsectionlevel{\expandafter\MakeUppercase\current@section@level\xspace}%

(End definition for \currentsectionlevel. This function is documented on page ??.)

```
\skipomgroup
```

```
4114 \cs_new_protected:Npn \skipomgroup {
      \ifcase\l_document_structure_section_level_int
4115
      \or\stepcounter{part}
4116
      \or\stepcounter{chapter}
4117
      \or\stepcounter{section}
4118
      \or\stepcounter{subsection}
4119
      \or\stepcounter{subsubsection}
4120
      \or\stepcounter{paragraph}
4121
      \or\stepcounter{subparagraph}
4122
4123
      \fi
4124 }
```

#### blindomgroup

```
4125 \newcommand\at@begin@blindomgroup[1]{}
4126 \newenvironment{blindomgroup}
4127 {
4128 \int_incr:N\l_document_structure_section_level_int
4129 \at@begin@blindomgroup\l_document_structure_section_level_int
4130 }{}
```

\omgroup@nonum

convenience macro:  $\operatorname{\mathsf{Nomgroup@nonum}}\{\langle level\rangle\}\{\langle title\rangle\}$  makes an unnumbered sectioning with title  $\langle title\rangle$  at level  $\langle level\rangle$ .

```
4131 \newcommand\omgroup@nonum[2] {
4132 \ifx\hyper@anchor\@undefined\else\phantomsection\fi
4133 \addcontentsline{toc}{#1}{#2}\@nameuse{#1}*{#2}
4134 }
```

(End definition for \omgroup@nonum. This function is documented on page ??.)

\omgroup@num

convenience macro:  $\mbox{omgroup@nonum}{\langle level\rangle}{\langle title\rangle}$  makes numbered sectioning with title  $\langle title\rangle$  at level  $\langle level\rangle$ . We have to check the short key was given in the omgroup environment and – if it is use it. But how to do that depends on whether the rdfmeta package has been loaded. In the end we call  $\mbox{sref@label@id}$  to enable crossreferencing.

4135 \newcommand\omgroup@num[2]{

 $<sup>^{16}\</sup>mathrm{EdNote}$ : MK: we may have to experiment with the more powerful uppercasing macro from <code>mfirstuc.sty</code> once we internationalize.

```
\tl_if_empty:NTF \l__document_structure_omgroup_short_tl {

4233
        \or\omdoc@sectioning[name=\omdoc@paragraph@kw,ref=this \omdoc@paragraph@kw]{paragraph}{#
4234
        \or\omdoc@sectioning[name=\omdoc@subparagraph@kw,ref=this \omdoc@subparagraph@kw]{paragr
4235
      \at@begin@omgroup[#1]\l_document_structure_section_level_int{#2}
4237
      \stex_ref_new_doc_target:n\l__document_structure_omgroup_id_str
4238
4239 }% for customization
4240 {}
    and finally, we localize the sections
    \newcommand\omdoc@part@kw{Part}
    \newcommand\omdoc@chapter@kw{Chapter}
    \newcommand\omdoc@section@kw{Section}
    \newcommand\omdoc@subsection@kw{Subsection}
    \newcommand\omdoc@subsubsection@kw{Subsubsection}
    \newcommand\omdoc@paragraph@kw{paragraph}
    \newcommand\omdoc@subparagraph@kw{subparagraph}
```

#### 31.7 Front and Backmatter

Index markup is provided by the omtext package [Koh20c], so in the omdoc package we only need to supply the corresponding \printindex command, if it is not already defined

\printindex

```
4248 \providecommand\printindex{\IfFileExists{\jobname.ind}{\input{\jobname.ind}}{}} (End definition for \printindex. This function is documented on page ??.)
```

some classes (e.g. book.cls) already have \frontmatter, \mainmatter, and \backmatter macros. As we want to define frontmatter and backmatter environments, we save their behavior (possibly defining it) in orig@\*matter macros and make them undefined (so that we can define the environments).

```
\cs_if_exist:NTF\frontmatter{
     \let\__document_structure_orig_frontmatter\frontmatter
     \let\frontmatter\relax
4251
4252 }{
      \tl_set:Nn\__document_structure_orig_frontmatter{
4253
        \clearpage
4254
        \@mainmatterfalse
4255
4256
        \pagenumbering{roman}
4257
4258 }
   \cs_if_exist:NTF\backmatter{
```

Using these, we can now define the frontmatter and backmatter environments

frontmatter we use the \orig@frontmatter macro defined above and \mainmatter if it exists, otherwise we define it.

```
\newenvironment{frontmatter}{
      \__document_structure_orig_frontmatter
4271 }{
      \cs_if_exist:NTF\mainmatter{
4272
        \mainmatter
4273
4274
        \clearpage
4275
        \@mainmattertrue
4276
        \pagenumbering{arabic}
4277
4278
4279 }
```

backmatter As backmatter is at the end of the document, we do nothing for \endbackmatter.

```
4280 \newenvironment{backmatter}{
4281    \__document_structure_orig_backmatter
4282 }{
4283    \cs_if_exist:NTF\mainmatter{
4284    \mainmatter
4285 }{
4286    \clearpage
4287    \@mainmattertrue
4288    \pagenumbering{arabic}
4289 }
4290 }
```

finally, we make sure that page numbering is a rabic and we have main matter as the default

4291 \@mainmattertrue\pagenumbering{arabic}

\prematurestop We initialize \afterprematurestop, and provide \prematurestop@endomgroup which looks up \omgroup@level and recursively ends enough {omgroup}s.

```
4292 \newcommand\afterprematurestop{}
4293 \def\prematurestop@endomgroup{
4294 \int_compare:nNnF \l_document_structure_omgroup_level_int = 0 {
4295 \end{omgroup}
4296 \prematurestop@endomgroup
4297 }
4298 }
4299 \providecommand\prematurestop{
4300 \message{Stopping~sTeX~processing~prematurely}
```

```
4301 \prematurestop@endomgroup
4302 \afterprematurestop
4303 \end{document}
4304 }

(End definition for \prematurestop. This function is documented on page ??.)
```

#### 31.8 Global Variables

```
\setSGvar set a global variable
            4305 \RequirePackage{etoolbox}
            4306 \newcommand\setSGvar[1]{\@namedef{sTeX@Gvar@#1}}
            (End definition for \setSGvar. This function is documented on page ??.)
\useSGvar use a global variable
            4307 \newrobustcmd\useSGvar[1]{%
                  \@ifundefined{sTeX@Gvar@#1}
            4308
                  {\PackageError{omdoc}
            4309
                     {The sTeX Global variable #1 is undefined}
                     {set it with \protect\setSGvar}}
            4312 \@nameuse{sTeX@Gvar@#1}}
            (End definition for \useSGvar. This function is documented on page ??.)
 \ifSGvar execute something conditionally based on the state of the global variable.
            4313 \newrobustcmd\ifSGvar[3]{\def\@test{#2}%
                  \@ifundefined{sTeX@Gvar@#1}
                  {\PackageError{omdoc}
            4315
                     {The sTeX Global variable #1 is undefined}
            4316
                     {set it with \protect\setSGvar}}
            4317
                  {\expandafter\ifx\csname sTeX@Gvar@#1\endcsname\@test #3\fi}}
            4318
            (End definition for \ifSGvar. This function is documented on page ??.)
```

# MiKoSlides – Implementation

### 32.1 Class and Package Options

We define some Package Options and switches for the mikoslides class and activate them by passing them on to beamer.cls and omdoc.cls and the mikoslides package. We pass the nontheorem option to the statements package when we are not in notes mode, since the beamer package has its own (overlay-aware) theorem environments.

```
4319 (*cls)
   <@@=mikoslides>
\RequirePackage{13keys2e,expl-keystr-compat}
4322
4323
   \keys_define:nn{mikoslides / cls}{
4324
           .code:n = {
     class
4325
       \PassOptionsToClass{\CurrentOption}{omdoc}
4326
       \str_if_eq:nnT{#1}{book}{
4327
         \PassOptionsToPackage{defaulttopsec=part}{mikoslides}
       \str_if_eq:nnT{#1}{report}{
         \PassOptionsToPackage{defaulttopsec=part}{mikoslides}
4331
4332
     },
4333
            .bool set: N = \c mikoslides notes bool,
    notes
4334
                         = { \bool_set_false:N \c__mikoslides_notes_bool },
     slides .code:n
4335
     unknown .code:n
4336
       \PassOptionsToClass{\CurrentOption}{omdoc}
4337
       \PassOptionsToClass{\CurrentOption}{beamer}
       \PassOptionsToPackage{\CurrentOption}{mikoslides}
4340
4341 }
4342 \ProcessKeysOptions{ mikoslides / cls }
4343 \bool_if:NTF \c__mikoslides_notes_bool {
     \PassOptionsToPackage{notes=true}{mikoslides}
4344
4345 }{
     \PassOptionsToPackage{notes=false}{mikoslides}
4346
4347 }
4348 (/cls)
```

```
now we do the same for the mikoslides package.
    (*package)
    \ProvidesExplPackage{mikoslides}{2020/12/06}{1.3}{MiKo slides Package}
    \RequirePackage{13keys2e,expl-keystr-compat}
4352
    \keys_define:nn{mikoslides / pkg}{
4353
      topsect
                       .str_set_x:N = \c_mikoslides_topsect_str,
4354
      defaulttopsect .str_set_x:N = \c__mikoslides_defaulttopsec_str,
 4355
      notes
                       .bool_set:N
                                       = \c__mikoslides_notes_bool ,
                                       = { \bool_set_false:N \c__mikoslides_notes_bool },
      slides
                        .code:n
                       .bool_set:N
                                       = \c__mikoslides_sectocframes_bool ,
      sectocframes
                       .bool_set:N
                                       = \c_{mikoslides_frameimages_bool},
 4350
      frameimages
                       .bool_set:N
                                       = \c_{mikoslides_fiboxed_bool},
      fiboxed
 4360
                       .bool set:N
                                       = \c__mikoslides_noproblems_bool,
      noproblems
4361
      unknown
                       .code:n
4362
         \PassOptionsToClass{\CurrentOption}{stex}
4363
         \PassOptionsToClass{\CurrentOption}{tikzinput}
4364
4365
    \ProcessKeysOptions{ mikoslides / pkg }
    \newif\ifnotes
    \bool_if:NTF \c__mikoslides_notes_bool {
4370
      \notestrue
4371 }{
      \notesfalse
4372
4373 }
we give ourselves a macro \@dtopsect that needs only be evaluated once, so that the
\ifdefstring conditionals work below.
4375 \str_if_empty:NTF \c__mikoslides_topsect_str {
      \verb|\str_set_eq:NN| = \verb|\mikoslidestopsect| \\ \verb|\c_mikoslides_defaulttopsec_str| \\
4377 7.5
      \verb|\str_set_eq:NN \ | \_mikoslidestopsect \ | c\_mikoslides\_topsect\_str|
4378
4379 }
4380 (/package)
    Depending on the options, we either load the article-based omdoc or the beamer
class (and set some counters).
    \bool_if:NTF \c__mikoslides_notes_bool {
4383
      \LoadClass{omdoc}
4384 7-1
      \LoadClass[10pt,notheorems,xcolor={dvipsnames,svgnames}]{beamer}
4385
      \newcounter{Item}
4386
      \newcounter{paragraph}
4387
      \newcounter{subparagraph}
4388
      \newcounter{Hfootnote}
      \RequirePackage{omdoc}
now it only remains to load the mikoslides package that does all the rest.
4392 \RequirePackage{mikoslides}
4393 (/cls)
```

In notes mode, we also have to make the beamer-specific things available to article via the beamerarticle package. We use options to avoid loading theorem-like environments, since we want to use our own from the STEX packages. The first batch of packages we want are loaded on mikoslides.sty. These are the general ones, we will load the STEX-specific ones after we have done some work (e.g. defined the counters m\*). Only the stex-logo package is already needed now for the default theme.

```
(*package)
4394
    \bool_if:NT \c__mikoslides_notes_bool {
4395
     \RequirePackage{a4wide}
     \RequirePackage{marginnote}
     \PassOptionsToPackage{usenames, dvipsnames, svgnames}{xcolor}
     \RequirePackage{mdframed}
     \RequirePackage[noxcolor,noamsthm]{beamerarticle}
     \RequirePackage[bookmarks,bookmarksopen,bookmarksnumbered,breaklinks,hidelinks]{hyperref}
4401
4402 }
   \RequirePackage{stex-compatibility}
4403
   \RequirePackage{stex-tikzinput}
   \RequirePackage{etoolbox}
   \RequirePackage{amssymb}
   \RequirePackage{amsmath}
   \RequirePackage{comment}
4409 \RequirePackage{textcomp}
4410 \RequirePackage{url}
4411 \RequirePackage{graphicx}
4412 \RequirePackage{pgf}
```

#### 32.2 Notes and Slides

For the lecture notes cases, we also provide the \usetheme macro that would otherwise come from the the beamer class. While the latter loads beamertheme $\langle theme \rangle$ .sty, the notes version loads beamernotestheme $\langle theme \rangle$ .sty. 17

```
4413 \bool_if:NT \c__mikoslides_notes_bool {
4414 \renewcommand\usetheme[2][]{\usepackage[#1]{beamernotestheme#2}}
4415 }
```

We define the sizes of slides in the notes. Somehow, we cannot get by with the same here.

```
4416 \newcounter{slide}
4417 \newlength{\slidewidth}\setlength{\slidewidth}{13.5cm}
4418 \newlength{\slideheight}\setlength{\slideheight}{9cm}
```

The note environment is used to leave out text in the slides mode. It does not have a counterpart in OMDoc. So for course notes, we define the note environment to be a no-operation otherwise we declare the note environment as a comment via the comment package.

```
4419 \bool_if:NTF \c__mikoslides_notes_bool {
4420 \renewenvironment{note}{\ignorespaces}{}
4421 }{
4422 \excludecomment{note}
4423 }
```

EdN:17

 $<sup>^{-17}{</sup>m EdNote}$ : MK: This is not ideal, but I am not sure that I want to be able to provide the full theme functionality there.

We first set up the slide boxes in article mode. We set up sizes and provide a box register for the frames and a counter for the slides.

```
4424 \bool_if:NT \c__mikoslides_notes_bool {
              \newlength{\slideframewidth}
        4425
              \setlength{\slideframewidth}{1.5pt}
        4426
       We first define the keys.

```

#### 32.3 Header and Footer Lines

Now, we set up the infrastructure for the footer line of the slides, we use boxes for the logos, so that they are only loaded once, that considerably speeds up processing.

\setslidelogo

The default logo is the SIEX logo. Customization can be done by  $\setslidelogo\{\langle logo name \rangle\}$ .

```
4543 \newlength{\slidelogoheight}
4544
4545 \bool_if:NTF \c_mikoslides_notes_bool {
4546 \setlength{\slidelogoheight}{.4cm}
4547 }{
4548 \setlength{\slidelogoheight}{1cm}
4549 }
4550 \newsavebox{\slidelogo}
4551 \sbox{\slidelogo}{\sTeX}
4552 \newrobustcmd{\setslidelogo}{[1]{
4553 \sbox{\slidelogo}{\includegraphics[height=\slidelogoheight]{#1}}
4554 }
```

(End definition for \setslidelogo. This function is documented on page ??.)

\setsource

\source stores the writer's name. By default it is *Michael Kohlhase* since he is the main user and designer of this package. \setsource $\{\langle name \rangle\}$  can change the writer's name.

```
\label{locally 4555} $$ \operatorname{\ensure}{Michael Kohlhase}\% \ customize \ locally $$ 4556 \ \ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\ensuremath{\e
```

(End definition for \setsource. This function is documented on page ??.)

\setlicensing

Now, we set up the copyright and licensing. By default we use the Creative Commons Attribuition-ShareAlike license to strengthen the public domain. If package hyperref is loaded, then we can attach a hyperlink to the license logo.  $\ensuremath{\mbox{setlicensing}}[\langle url \rangle] \{\langle logoname \rangle\}$  is used for customization, where  $\langle url \rangle$  is optional.

```
\def\copyrightnotice{\footnotesize\copyright :\hspace{.3ex}{\source}}
    \newsavebox{\cclogo}
   \sbox{\cclogo}{\includegraphics[height=\slidelogoheight]{cc_somerights}}
   \newif\ifcchref\cchreffalse

(End definition for  $\final {\it Lameimage}$ ). This function is documented on page  $\ref{eq:lameimage}$ .)

#### 32.5 Colors and Highlighting

We first specify sans serif fonts as the default.

```
4636 \sffamily
```

Now, we set up an infrastructure for highlighting phrases in slides. Note that we use content-oriented macros for highlighting rather than directly using color markup. The first thing to to is to adapt the green so that it is dark enough for most beamers

```
4637 \AddToHook{begindocument}{
4638 \definecolor{green}{rgb}{0,.5,0}
4639 \definecolor{purple}{cmyk}{.3,1,0,.17}
4640 }
```

We customize the \defemph, \symrefemph, \compemph, and \titleemph macros with colors. Furthermore we customize the \\_\_omtextlec macro for the appearance of line end comments in \lec.

```
4641 % \def\STpresent#1{\textcolor{blue}{#1}}
4642 \def\defemph#1{{\textcolor{magenta}{#1}}}
4643 \def\symrefemph#1{{\textcolor{cyan}{#1}}}
4644 \def\compemph#1f{\textcolor{blue}{#1}}}
4645 \def\__omtext_lec#1f(\textcolor{green}{#1})}
```

I like to use the dangerous bend symbol for warnings, so we provide it here.

\textwarning as the macro can be used quite often we put it into a box register, so that it is only loaded once

```
4647 \pgfdeclareimage[width=.8em]{miko@small@dbend}{dangerous-bend}
4648 \def\smalltextwarning{
4649 \pgfuseimage{miko@small@dbend}
4650 \xspace
4651 }
4652 \pgfdeclareimage[width=1.2em]{miko@dbend}{dangerous-bend}
```

```
\newrobustcmd\textwarning{
       \raisebox{-.05cm}{\pgfuseimage{miko@dbend}}
4655
       \xspace
4656 }
    \pgfdeclareimage[width=2.5em]{miko@big@dbend}{dangerous-bend}
4657
     \newrobustcmd\bigtextwarning{
       \raisebox{-.05cm}{\pgfuseimage{miko@big@dbend}}
4661 }
(End definition for \textwarning. This function is documented on page ??.)
4662 \newrobustcmd\putgraphicsat[3]{
       4663
4664 }
    \newrobustcmd\putat[2]{
       \begin{array}{l} \begin{array}{l} \begin{array}{l} \begin{array}{l} \begin{array}{l} \begin{array}{l} \begin{array}{l} \end{array} \end{array} \end{array} \end{array} \end{array} \end{array}
```

#### 32.6 Sectioning

If the sectocframes option is set, then we make section frames. We first define counters for part and chapter, which beamer.cls does not have and we make the section counter which it does dependent on chapter.

```
4668 \bool_if:NT \c__mikoslides_sectocframes_bool {
4669 \str_if_eq:VnTF \__mikoslidestopsect{part}{
4670 \newcounter{chapter}\counterwithin*{section}{chapter}
4671 }{
4672 \str_if_eq:VnT\__mikoslidestopsect{chapter}{
4673 \newcounter{chapter}\counterwithin*{section}{chapter}
4674 }
4675 }
```

\section@level

We set the \section@level counter that governs sectioning according to the class options. We also introduce the sectioning counters accordingly.

#### \section@level

```
\def\part@prefix{}
   \@ifpackageloaded{omdoc}{}{
     \str_case:VnF \__mikoslidestopsect {
       {part}{
         \int_set:Nn \l_document_structure_section_level_int {0}
         \def\thesection{\arabic{chapter}.\arabic{section}}
         \def\part@prefix{\arabic{chapter}.}
4683
       }
4684
       {chapter}{
4685
         \int_set:Nn \l_document_structure_section_level_int {1}
4686
          \def\thesection{\arabic{chapter}.\arabic{section}}
4687
          \def\part@prefix{\arabic{chapter}.}
4688
4689
       \int_set:Nn \l_document_structure_section_level_int {2}
       \def\part@prefix{}
4692
```

```
4693 }
4694 }
4695
4696 \bool_if:NF \c__mikoslides_notes_bool { % only in slides}
(End definition for \section@level. This function is documented on page ??.)
```

The new counters are used in the omgroup environment that choses the LATEX sectioning macros according to \section@level.

#### omgroup

     }%
4767 }
   \bool_if:NTF \c__mikoslides_noproblems_bool {
4768
      \newenvironment{problems}{}{}
4769
4770 }{
4771
     \excludecomment{problems}
```

#### 32.7 Excursions

\excursion

The excursion macros are very simple, we define a new internal macro \excursionref and use it in \excursion, which is just an \inputref that checks if the new macro is defined before formatting the file in the argument.

```
4773 \gdef\printexcursions{}
4774 \newcommand\excursionref[2]{% label, text
4775 \bool_if:NT \c_mikoslides_notes_bool {
4776 \begin{sparagraph}[title=Excursion]
4777 #2 \sref[fallback=the appendix]{#1}.
4778 \end{sparagraph}
4779 }
```

```
\newcommand\activate@excursion[2][]{
                        \gappto\printexcursions{\inputref[#1]{#2}}
                  4782
                  4783 }
                      \newcommand\excursion[4][]{% repos, label, path, text
                  4784
                        \bool_if:NT \c__mikoslides_notes_bool {
                  4785
                          \activate@excursion[#1]{#3}\excursionref{#2}{#4}
                  4786
                  4788 }
                 (End definition for \excursion. This function is documented on page ??.)
\excursiongroup
                     \keys_define:nn{mikoslides / excursiongroup }{
                                  .str_set_x:N = \l__mikoslides_excursion_id_str,

### Chapter 33

# The Implementation

### 33.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. They all come with their own conditionals that are set by the options.

```
4816 (*package)
4817 (@@=problems)
4818 \ProvidesExplPackage{problem}{2019/03/20}{1.3}{Semantic Markup for Problems}
   \RequirePackage{13keys2e,expl-keystr-compat}
4819
4820
4821 \keys_define:nn { problem / pkg }{
    notes .default:n
4822
              .bool_set:N = \c__problems_notes_bool,
    notes
                            = { true },
     gnotes
              .default:n
    gnotes .bool_set:N = \c__problems_gnotes_bool,
4825
    hints
              .default:n
                            = { true },
4826
            .bool_set:N = \c__problems_hints_bool,
    hints
4827
    solutions .default:n
                            = { true },
4828
    solutions .bool_set:N = \c_problems_solutions_bool,
4829
            .default:n
                            = { true },
    pts
4830
             .bool_set:N = \c_problems_pts_bool,
   pts
4831
            .default:n
                             = { true },
4832
             .bool\_set:N = \c_\_problems\_min\_bool,
    boxed .default:n
                            = { true },
    boxed .bool_set:N = \c_problems_boxed_bool,
     unknown .code:n
4836
4837 }
4838 \def\solutionstrue{
     \bool_set_true:N \c__problems_solutions_bool
4839
4840 }
4841 \def\solutionsfalse{
     \bool_set_false:N \c__problems_solutions_bool
   \ProcessKeysOptions{ problem / pkg }
```

Then we make sure that the necessary packages are loaded (in the right versions).

```
4846 \RequirePackage{stex-compatibility}
4847 \RequirePackage{comment}
```

The next package relies on the LATEX3 kernel, which LATEXMLonly partially supports. As it is purely presentational, we only load it when the boxed option is given and we run LATEXML.

```
4848 \bool_if:NT \c__problems_boxed_bool { \RequirePackage{mdframed} }
```

\prob@\*@kw For multilinguality, we define internal macros for keywords that can be specialized in \*.ldf files.

```
4849 \def\prob@problem@kw{Problem}
    \def\prob@solution@kw{Solution}
4851 \def\prob@hint@kw{Hint}
4852 \def\prob@note@kw{Note}
4853 \def\prob@gnote@kw{Grading}
4854 \def\prob@pt@kw{pt}
4855 \def\prob@min@kw{min}
(End definition for \prob@*@kw. This function is documented on page ??.)
    For the other languages, we set up triggers
    \@ifpackageloaded{babel}{
        \verb|\clist_set:Nx \l_tmpa_clist {\bbl@loaded}|
        \clist_if_in:NnT \l_tmpa\_clist \{ngerman\} \{
4850
           \input{problem-ngerman.ldf}
4860
        \clist_if_in:NnT \l_tmpa_clist {finnish}{
4861
           \input{problem-finnish.ldf}
4862
4863
        \clist_if_in:NnT \l_tmpa_clist {french}{
4864
           \input{problem-french.ldf}
4865
        \clist_if_in:NnT \l_tmpa_clist {russian}{
           \input{problem-russian.ldf}
4869
4870 }{}
```

#### 33.2 Problems and Solutions

We now prepare the KeyVal support for problems. The key macros just set appropriate internal macros.

```
\keys_define:nn{ problem / problem }{
              .str_set_x:N = \\l_problems_prob_id_str,
     id
              .tl_set:N
                             = \l_problems_prob_pts_tl,
     min
              .tl_set:N
                             = \l__problems_prob_min_tl,
     title
             .tl_set:N
                             = \l__problems_prob_title_tl,
4875
     refnum .int_set:N
                             = \l__problems_prob_refnum_int
4876
4877
   \verb|\cs_new_protected:Nn \l_problems_prob_args:n \{|
4878
     \str_clear:N \l__problems_prob_id_str
4879
     \verb|\tl_clear:N \l_problems_prob_pts_tl|
4880
     \tl_clear:N \l__problems_prob_min_tl
4881
     \tl_clear:N \l__problems_prob_title_tl
```

Then we set up a counter for problems.

#### \numberproblemsin

```
4889 \newcounter{problem}
4890 \newcommand\numberproblemsin[1]{\@addtoreset{problem}{#1}}

(End definition for \numberproblemsin. This function is documented on page ??.)
```

\prob@label We provide the macro \prob@label to redefine later to get context involved.

4891 \newcommand\prob@label[1]{#1}

(End definition for \probClabel. This function is documented on page ??.)

\prob@number We consolid

We consolidate the problem number into a reusable internal macro

```
\newcommand\prob@number{

4893 \int_if_exist:NTF \l_problems_inclprob_refnum_int {

4894 \prob@label{\int_use:N \l_problems_inclprob_refnum_int }

4895 }{

4896 \int_if_exist:NTF \l_problems_prob_refnum_int {

4897 \prob@label{\int_use:N \l_problems_prob_refnum_int }

4898 }{

4899 \prob@label\theproblem

4900 }

4900 }

4901 }

4902 }
```

(End definition for \prob@number. This function is documented on page ??.)

/bropericie

We consolidate the problem title into a reusable internal macro as well. \prob@title takes three arguments the first is the fallback when no title is given at all, the second and third go around the title, if one is given.

```
4903 \newcommand\prob@title[3]{%
4904  \tl_if_exist:NTF \l_problems_inclprob_title_tl {
4905     #2 \l_problems_inclprob_title_tl #3
4906  }{
4907     \tl_if_exist:NTF \l_problems_prob_title_tl {
4908          #2 \l_problems_prob_title_tl #3
4909     }{
4910          #1
4911     }
4912  }
4913 }
```

(End definition for \prob@title. This function is documented on page ??.)
With these the problem header is a one-liner

\prob@heading We consolidate the problem header line into a separate internal macro that can be reused in various settings.

```
4914 \def\prob@heading{
4915 \prob@problem@kw~\prob@number\prob@title{~}{~(}{)\strut}
4916 \%\sref@label@id{\prob@problem@kw~\prob@number}{}
4917 }
```

(End definition for \prob@heading. This function is documented on page ??.)

With this in place, we can now define the problem environment. It comes in two shapes, depending on whether we are in boxed mode or not. In both cases we increment the problem number and output the points and minutes (depending) on whether the respective options are set.

#### problem

```
4918 \newenvironment{problem}[1][]{
4919  \__problems_prob_args:n{#1}%\sref@target%
4920  \@in@omtexttrue% we are in a statement (for inline definitions)
4921  \stepcounter{problem}\record@problem
4922  \def\current@section@level{\prob@problem@kw}
4923  \par\noindent\textbf\prob@heading\show@pts\show@min\\ignorespacesandpars
4924  }%
4925  {\smallskip}
4926  \bool_if:NT \c_problems_boxed_bool {
4927  \surroundwithmdframed{problem}
4928 }
```

\record@problem This macro records information about the problems in the \*.aux file.

```
\def\record@problem{
4929
       \protected@write\@auxout{}
4930
4931
          \string\@problem{\prob@number}
4932
             \tl_if_exist:NTF \l__problems_inclprob_pts_tl {
4935
                \l__problems_inclprob_pts_tl
1036
                \label{local_problems_prob_pts_tl} $$ l_problems_prob_pts_tl $$
1037
4938
          }%
4939
4940
             \tl_if_exist:NTF \l__problems_inclprob_min_tl {
4941
                \label{local_local_problems_inclprob_min_tl} $$ l_problems_inclprob_min_tl $$
4942
                \l__problems_prob_min_tl
       }
4947
4948 }
```

(End definition for \record@problem. This function is documented on page ??.)

This macro acts on a problem's record in the \*.aux file. It does not have any functionality here, but can be redefined elsewhere (e.g. in the assignment package).

```
4949 \def\@problem#1#2#3{}
```

(End definition for  $\ensuremath{\texttt{Cproblem}}$ . This function is documented on page  $\ref{page}$ .)

solution

The solution environment is similar to the problem environment, only that it is independent of the boxed mode. It also has it's own keys that we need to define first.

```
4950 \keys_define:nn { problem / solution }{
                     .str_set_x:N = \l__problems_solution_id_str ,
4951
      id
                                    = \l__problems_solution_for_tl ,
      for
                     .tl_set:N
4952
                     .dim_set:N
                                    = \l_problems_solution_height_dim ,
      height
4953
      creators
                     .clist_set:N = \l__problems_solution_creators_clist ,
4954
      contributors
                    .clist_set:N = \l__problems_solution_contributors_clist ,
4955
                     .tl set:N
                                    = \l_problems_solution_srccite_tl
4956
4957 }
    \cs_new_protected:Nn \__problems_solution_args:n {
      \str_clear:N \l__problems_solution_id_str
      \tl_clear:N \l__problems_solution_for_tl
      \verb|\tl_clear:N \l_problems_solution_srccite_tl|\\
4961
      \verb|\clist_clear:N \ll_problems_solution_creators_clist|
4962
      \clist_clear:N \l__problems_solution_contributors_clist
4963
      \dim_zero:N \l__problems_solution_height_dim
4964
      \keys_set:nn { problem / solution }{ #1 }
4965
4966 }
the next step is to define a helper macro that does what is needed to start a solution.
    \newcommand\@startsolution[1][]{
      \ problems solution args:n { #1 }
4968
      \@in@omtexttrue% we are in a statement.
4969
      \bool_if:NF \c__problems_boxed_bool { \hrule }
      \smallskip\noindent
      {\textbf\prob@solution@kw :\enspace}
      \begin{small}
4973
      \def\current@section@level{\prob@solution@kw}
4974
4975
      \ignorespacesandpars
4976
```

\startsolutions for the \startsolutions macro we use the \specialcomment macro from the comment package. Note that we use the \@startsolution macro in the start codes, that parses the optional argument.

```
\newcommand\startsolutions{
4977
      \specialcomment{solution}{\@startsolution}{
4978
         \bool_if:NF \c__problems_boxed_bool {
4979
           \hrule\medskip
4980
4981
         \end{small}%
      \bool_if:NT \c__problems_boxed_bool {
4984
         \surroundwithmdframed{solution}
4985
4986
(End definition for \startsolutions. This function is documented on page ??.)
```

\stopsolutions

4988 \newcommand\stopsolutions{\excludecomment{solution}}

```
(\mathit{End \ definition \ for \ } \mathtt{stopsolutions}.\ \mathit{This \ function \ is \ documented \ on \ page \ \ref{eq:constraints}.)}
              so it only remains to start/stop solutions depending on what option was specified.
          4989 \bool_if:NTF \c__problems_solutions_bool {
                \startsolutions
          4990
          4991 }{
                 \stopsolutions
          4992
          4993 }

(End definition for \mcc. This function is documented on page ??.)

#### 33.4 Including Problems

\includeproblem

The \includeproblem command is essentially a glorified \input statement, it sets some internal macros first that overwrite the local points. Importantly, it resets the inclprob keys after the input.

```
5086
              \keys_define:nn{ problem / inclproblem }{
5087
                                                            .str_set_x:N = \l__problems_inclprob_id_str,
5088
                                                                                                                 = \l_problems_inclprob_pts_tl,
                                                         .tl_set:N
5089
                                                        .tl_set:N
                                                                                                                   = \l__problems_inclprob_min_tl,
                      min
 5090
                       title
                                                         .tl_set:N
                                                                                                                   = \l__problems_inclprob_title_tl,
                                                                                                                   = \l__problems_inclprob_refnum_int,
                       refnum
                                                      .int_set:N

```

# Chapter 34

# Implementation: The hwexam Class

The functionality is spread over the hwexam class and package. The class provides the document environment and pre-loads some convenience packages, whereas the package provides the concrete functionality.

#### 34.1 Class Options

To initialize the hwexam class, we declare and process the necessary options by passing them to the respective packages and classes they come from.

We load omdoc.cls, and the desired packages. For the LATEXML bindings, we make sure the right packages are loaded.

```
5199 \LoadClass{omdoc}
5200 \RequirePackage{stex}
5201 \RequirePackage{hwexam}
5202 \RequirePackage{tikzinput}
5203 \RequirePackage{graphicx}
5204 \RequirePackage{a4wide}
5205 \RequirePackage{amssymb}
5206 \RequirePackage{amstext}
5207 \RequirePackage{amsmath}
```

Finally, we register another keyword for the document environment. We give a default assignment type to prevent errors

```
\newcommand\assig@default@type{\hwexam@assignment@kw}

5209 \def\document@hwexamtype{\assig@default@type}

5210 \deg-document_structure\
5211 \keys_define:nn { document-structure / document }{
5212 id .str_set_x:N = \c_document_structure_document_id_str,
5213 hwexamtype .tl_set:N = \document@hwexamtype
5214 }

5215 \deg(de=hwexam\)
5216 \deg(c|s\)
```

## Chapter 35

# Implementation: The hwexam Package

#### 35.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. Some come with their own conditionals that are set by the options, the rest is just passed on to the problems package.

```
5217 (*package)
5218 \ProvidesExplPackage{hwexam}{2019/03/20}{1.1}{homework assignments and exams}
5219 \RequirePackage{l3keys2e,expl-keystr-compat}
5220
5221 \newif\iftest\testfalse
5222 \DeclareOption{test}{\testfrue}
5223 \newif\ifmultiple\multiplefalse
5224 \DeclareOption{multiple}{\multipletrue}
5225 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{problem}}
5226 \ProcessOptions

Then we make sure that the necessary packages are loaded (in the right versions).
5227 \RequirePackage{keyval}[1997/11/10]
5228 \RequirePackage{problem}
```

\hwexam@\*@kw

For multilinguality, we define internal macros for keywords that can be specialized in \*.ldf files.

```
(End definition for \hwexam@*@kw. This function is documented on page ??.)
    For the other languages, we set up triggers
    \@ifpackageloaded{babel}{}{\RequirePackage[base]{babel}}
5242 \clist_set:Nx \l_tmpa_clist {\bbl@loaded}
5243 \clist_if_in:NnT \l_tmpa_clist {ngerman}{
      \input{hwexam-ngerman.ldf}
5244
5245 }
5246 \clist_if_in:NnT \l_tmpa_clist {finnish}{
      \input{hwexam-finnish.ldf}
5248
5249 \clist_if_in:NnT \l_tmpa_clist {french}{
      \input{hwexam-french.ldf}
5251 }
5252 \clist_if_in:NnT \l_tmpa_clist {russian}{
      \input{hwexam-russian.ldf}
5254 }
```

#### 35.2 Assignments

5255 \newcounter{assignment}

Then we set up a counter for problems and make the problem counter inherited from problem.sty depend on it. Furthermore, we specialize the \prob@label macro to take the assignment counter into account.

```
\numberproblemsin{assignment}
   \renewcommand\prob@label[1]{\arabic{assignment}.#1}
   We will prepare the keyval support for the assignment environment.
5258 \keys_define:nn { hwexam / assignment } {
5259 id .str_set_x:N = \l_hwexam_assign_id_str,
5260 number .int_set:N = \l_hwexam_assign_number_int,
5261 title .tl_set:N = \l_hwexam_assign_title_tl,
5262 type .tl_set:N = \l_hwexam_assign_type_tl,
5263 given .tl_set:N = \l_hwexam_assign_given_tl,
5264 due .tl_set:N = \l_hwexam_assign_due_tl,
5265 loadmodules .code:n = {
   \bool_set_true:N \l__hwexam_assign_loadmodules_bool
5267 }
5268 }
5269 \cs_new_protected:Nn \__hwexam_assignment_args:n {
5270 \str_clear:N \l__hwexam_assign_id_str
5271 \int_set:Nn \l__hwexam_assign_number_int {-1}
5272 \tl_clear:N \l_hwexam_assign_title_tl
5273 \tl_clear:N \l_hwexam_assign_type_tl
5274 \tl_clear:N \l_hwexam_assign_given_tl
5275 \tl_clear:N \l_hwexam_assign_due_tl
5276 \bool_set_false:N \l__hwexam_assign_loadmodules_bool
5277 \keys_set:nn { hwexam / assignment }{ #1 }
5278 }
```

The next three macros are intermediate functions that handle the case gracefully, where the respective token registers are undefined.

The \given@due macro prints information about the given and due status of the assignment. Its arguments specify the brackets.

```
5279 \newcommand\given@due[2]{
5280 \bool lazy all:nF {
5281 {\tl_if_empty_p:V \l_hwexam_inclassign_given_tl}
5282 {\tl_if_empty_p:V \l_hwexam_assign_given_tl}
5283 {\tl if empty p:V \l hwexam inclassign due tl}
5284 {\tl_if_empty_p:V \l__hwexam_assign_due_tl}
5285 }{ #1 }
5287 \tl_if_empty:NTF \l_hwexam_inclassign_given_tl {
5288 \tl_if_empty:NF \l_hwexam_assign_given_tl {
   \hwexam@given@kw\xspace\l_hwexam_assign_given_tl
5290 }
5291 }{
5292 \hwexam@given@kw\xspace\l_hwexam_inclassign_given_tl
5293
5294
5295 \bool_lazy_or:nnF {
5296 \bool_lazy_and_p:nn {
5297 \tl_if_empty_p:V \l__hwexam_inclassign_due_tl
5299 \tl_if_empty_p:V \l__hwexam_assign_due_tl
5300 }
5301 }{
5302 \bool_lazy_and_p:nn {
5303 \tl_if_empty_p:V \l__hwexam_inclassign_due_tl
5305 \tl_if_empty_p:V \l__hwexam_assign_due_tl
5307 }{ ,~ }
5308
5309 \tl_if_empty:NTF \l_hwexam_inclassign_due_tl {
5310 \tl_if_empty:NF \l_hwexam_assign_due_tl {
5311 \hwexam@due@kw\xspace \l_hwexam_assign_due_tl
5312 }
5313 }{
5314 \hwexam@due@kw\xspace \l hwexam inclassign due tl
5315 }
5317 \bool_lazy_all:nF {
5318 { \tl_if_empty_p:V \l_hwexam_inclassign_given_tl }
5319 { \tl_if_empty_p:V \l_hwexam_assign_given_tl }
5320 { \tl_if_empty_p:V \l__hwexam_inclassign_due_tl }
5321 { \tl_if_empty_p:V \l__hwexam_assign_due_tl }
5322 }{ #2 }
5323 }
```

\assignment@title

This macro prints the title of an assignment, the local title is overwritten, if there is one from the \inputassignment. \assignment@title takes three arguments the first is the fallback when no title is given at all, the second and third go around the title, if one is given.

5324 \newcommand\assignment@title[3]{

```
5325 \tl_if_empty:NTF \l_hwexam_inclassign_title_tl {
5326 \tl_if_empty:NTF \l_hwexam_assign_title_tl {
5327 #1
5328 }{
5329 #2\l_hwexam_assign_title_tl#3
5330 }
5331 }{
5332 #2\l_hwexam_inclassign_title_tl#3
5333 }
5333 }
5334 }
```

(End definition for \assignment@title. This function is documented on page ??.)

\assignment@number

Like \assignment@title only for the number, and no around part.

```
5336 \newcommand\assignment@number{
5336 \int_compare:nNnTF \l_hwexam_inclassign_number_int = {-1} {
5337 \int_compare:nNnF \l_hwexam_assign_number_int = {-1} {
5338 \int_use:N \l_hwexam_assign_number_int
5339 }
5340 }{
5341 \int_use:N \l_hwexam_inclassign_number_int
5342 }
5343 }
```

(End definition for \assignment@number. This function is documented on page ??.)

With them, we can define the central assignment environment. This has two forms (separated by \ifmultiple) in one we make a title block for an assignment sheet, and in the other we make a section heading and add it to the table of contents. We first define an assignment counter

 ${\tt assignment}$ 

For the assignment environment we delegate the work to the Cassignment environment that depends on whether multiple option is given.

```
\newenvironment{assignment}[1][]{
5345 \__hwexam_assignment_args:n { #1 }
5346 %\sref@target
5347 \let\__hwexamnum\l__hwexam_assign_number_int
5348 \int_compare:nNnF \l__hwexam_assign_number_int = {-1} {
5349 \stepcounter{assignment}
5350 }{
5351 \setcounter{assignment}{\int_use:N\__hwexamnum}
5352 }
5353 \setcounter{problem}{0}
5354 \def\current@section@level{\document@hwexamtype}
5355 %\sref@label@id{\document@hwexamtype \thesection}
5356 \begin{@assignment}
5357 }{
5358 \end{@assignment}
5359 }
```

In the multi-assignment case we just use the omdoc environment for suitable sectioning.

```
5360 \def\_hwexamasstitle{
5361 \protect\document@hwexamtype~\arabic{assignment}}
5362 \assignment@title{}{\;(}{)\;} -- \given@due{}{}
5363 }
```

```
5364 \ifmultiple
5365 \newenvironment{@assignment}{
5366 \bool_if:NTF \l_hwexam_assign_loadmodules_bool {
5367 \begin{omgroup}[loadmodules]{\_hwexamasstitle}
    \begin{omgroup}{\__hwexamasstitle}
5370 }
5371 }{
5372 \end{omgroup}
5373 }
for the single-page case we make a title block from the same components.
5375 \newenvironment{@assignment}{
5376 \begin{center}\bf
5377 \Large\@title\strut\\
\label{lem:continuous} $$ \document@hwexamtype^\arabic{assignment}\assignment@title{\;}{:\;}{\\}} $$
5379 \large\given@due{--\;}{\;--}
5380 \end{center}
5381 }{}
5382 \fi% multiple
```

#### 35.3 Including Assignments

\in\*assignment

This macro is essentially a glorified \include statement, it just sets some internal macros first that overwrite the local points Importantly, it resets the inclassig keys after the input.

```
5383 \keys_define:nn { hwexam / inclassignment } {
5384 %id .str_set_x:N = \l_hwexam_assign_id_str,
